SKCET | WOMEN ENTREPREUNERS FOOD FAIR

School of Management in association with **NABARD LEDP Entrepreneur and RamasamyChinnammal Trust** organized **Women Entrepreneurs Food Fair** at Sri Krishna Square on 26.04.2023 which was inaugurated by our **Principal Madam Dr. J. Janet** in the presence of **Mr.C.Thirumala Rao** - District Development Manager, NABARD and **Dr.SaraswatiEswaran** - Managing Trustee, RamasamyChinnammal Trust and the Deans and Head of the Departments.

Insights

- Food Fair was successfully inaugurated and around 5000 people visited stalls.
- The stalls had Millet based laddus, chocolates, flavors of pickles, rice powders, brownies and other assorted snacks and sweets.
- Other stalls with summer coolers like Raagikool, flavors of milkshakes, sharbhat, fresh fruit essence and millet ice creams were also kept for sale.
- The students gained and enhanced their entrepreneurial skills.

WIN CASH PRIZES

Event Organizers : Faculty Coordinator Student Coordinator

First year MBA students participated in **Sadhana 2023 - Management Meet** hosted by **RVS Institute of Management Studies** on 19th Apr 2023. They have won first prize in 5 events and have also earned the **Overall Trophy** and cash prize worth Rs.15,000/- Our beloved **Principal Madam Dr. J. Janet** congratulated the winners.

MCT| BEST PAPER AWARD

K. Amritbalaji, G.Harinisri and P.Chandru, students of **Second year MCT** have won the **Best Paper Award** with a cash prize of Rs.3000/- in **ELZIA 2K23** conducted at **Hindustan College of Engineering and Technology, Coimbatore.**

MCT| INNOVATION PRESENTATION

Adith, Baranisundar, Benjamin and Bharanidharan, students of **Second year students of MCT** have won the **First Prize** in the event **“Innovation Presentation”** in **Kurukshetra'23** conducted by **College of Engineering, Guindy, Chennai.** The team was mentored by **Dr.G.Veerappan and Dr.N.Mithran**, faculty members of MCT.

MCT| AVANZARE V17.0

Mr. Lionel Roshan P and Shwetha D, students of **Second** year **CSBS** has won **Third** place in the **Paper Presentation** and **Second** place in **Ideathon** event in AVANZARE V17.0 - A National Level Symposium organized by Institute of Electrical and Electronics Engineering (IEEE STB - 29741) at Kongu Engineering College on 25.04.2023.

CSBS | PAPER PRESENTATION

Mr.Venkatraman P, Vijay Ragavendra S.R, Tamil Anbu.R students of Second year CSBS, have won Second place in the paper presentation, VANZARE V 17.0-A National Symposium organized by Institute of Electrical and Electronics Engineering (IEEE STB - 29741) at Kongu Engineering College on 25.04.2023.

CIVIL | OUTSIDE CLASS LEARNING EXPERIENCE

Second year B.E. Civil Engineering students visited **Varma Ready Mix Concrete Plant** on 18.04.2023 as part of **Outside Classroom Learning Experience** for the course **Engineering Geology and Concrete Technology**.

Ms.R.Hemavathi and Dr.P.Saravanakumar, faculty members of the Department accompanied the students.

Key Learnings:

- Manufacturing of concrete
- Types of admixtures
- Computerized Load cell for loading ingredients
- Silo for storing ingredients
- Convevor belt

SOM | WEBINAR ON PRODUCT MANAGEMENT

School of Management organized a Webinar entitled “**Product Management and its Financials at Microsoft**” on 20.04.2023.

Mr. DhanasekarRaju, Principal, Product Manager, Microsoft, Seattle, USA was the Resource Person.

SESSION HIGHLIGHTS:

- Microsoft product Management strategies
- Information protection and Governance
- Insider Risk and Privacy Management
- Microsoft Financials, COGS tracking and Optimization
- Insights on new business opportunities

S&H | LIBRARY ORIENTATION

Vankantram Learning Centre conducted an orientation programme for the First year BE/B.Tech students. This programme was organized to familiarize the students with the available resources, services and facilities offered by our library. **Dr.S.A.Fazlur Rahman**, Librarian headed the session and interacted with the students on the best accessibility of the resources adequately to their own satisfaction. In addition, Digital Library-Hands on training was also provided to access the unlimited resources available.

IT | HOD INTERACTION WITH FIRST YEAR STUDENTS

Department of **Information Technology** organized an interactive session with first year students. Dr. Suseela, HoD, IT along with the faculty members and Hackathon winners addressed the students and discussed about result analysis, active participation in hackathons and coding contest, Mode of Hackathons and highlighted the Department hackathon achievements. Additionally general awareness to maintain discipline and to follow ethics was also discussed.

MCT|ASSOCIATION VALEDICTORY & IIC GUEST LECTURE

Department of **Mechatronics Engineering** organized Association Valedictory and IIC Guest Lecture on "**Electric Vehicle Drivetrain Architecture and Design Considerations**" on 25.4.2023 .

Resource Person:

Mr.AswinPalanisami, Founder, Vinuruk Technologies, Coimbatore

Session Takeaways:

- Electric vehicle architecture
- EV motors and their selection
- Motor drive architecture
- Motor drive selection for EV

S&H | EXTENDED HOUR ACTIVITY

Student Extramural Club of SHA conducted **The Last Man Standing** - mind game for the **First** year students. The event was an entertaining and stimulating activity that improved their cognitive and interpersonal skills.

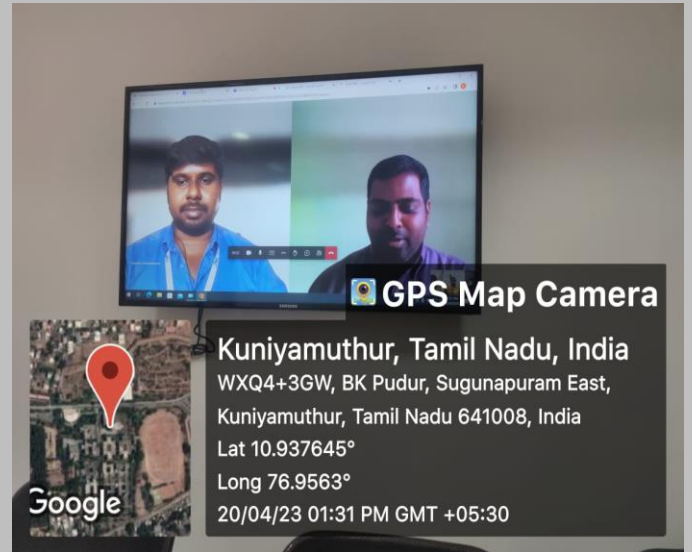

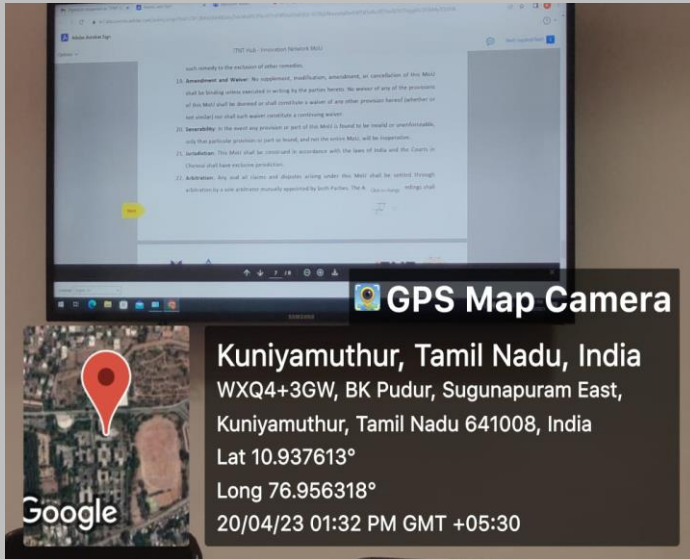

S&H | EXTENDED HOUR ACTIVITY

Imagination is the soil that brings dreams to life!

Theatre Club of SHA conducted **Situational Role Play** event for the **First** year students. Students showcased their imagination skill and critical observation with great zeal.

SKCET | ITNT HUB- MOU SIGNING

Memorandum of Understanding has been exchanged between **SKCET** and **Tamil Nadu Technology (iTNT) Hub**. The MoU was signed in the presence of our beloved Principal Madam **Dr. J.Janet**, **Dr. S. Sophia**, Dean, R&D, **Dr. P. Kavitha Rani**, Professor & Head, **M.Tech CSE**, on **24.04.2023**. The team interacted with **Mr. Vijay Anand**, Chief Executive Officer, **Tamil Nadu technology (iTNT) Hub** regarding the collaboration of advanced research to build a demand-driven innovation ecosystem.

PLACEMENT | TESTIMONIAL BY PLACED STUDENTS

SKCET has provided me with a great environment and wonderful opportunity to learn and excel in academics as well as extracurricular activities. Method of teaching and the curriculum here made me secure a place in the corporate world. I have found the campus facilities to be excellent here; there are so many places to study and so many places to explore. You can go to the library for quiet study and there are also more relaxed spaces across campus for group study too. My sincere thanks to the Principal, Advisor, Professors and Placement team who made my college life a memorable one. I am lucky to be a part of this great institution.

Survey of Online Teaching and Learning Methods Special References From Chennai City Section A- Research paper

SURVEY OF ONLINE TEACHING AND LEARNING METHODS SPECIAL REFERENCES FROM CHENNAI CITY

P.Kalaivani¹, S.Vijaykumar², P.Saravanakumar³

Article History: Received: 12.12.2022 Revised: 29.01.2023 Accepted: 15.03.2023

Abstract

Online teaching and learning is the method of taking classes using any mode of online app, delivery of notes or training using digital resources and this method is based on formal teaching and learning. This kind of online learning includes devices namely computers or laptop, tablets and smart mobiles by using internet. This method helps the users to learn from anywhere and anytime with some or without any restrictions. In general, online learning is a method of learning or educating people through online using any digital devices. During this Covid-19 pandemic period each and every industry worked through online mode, staffs are work from home without any lagging of their works. Each and every student was motivated to develop themselves by taking online courses and their self learning skills. This study is about online teaching methods that either helps the teachers and students in education or overburden them.

Keywords: online app, smart phones, E-Learning, Covid-19, pandemic.

Implementation of a Pre-Crash Detection System using Node MCU

Publisher: IEEE [Cite This](#) [PDF](#)

R Balaji V ; S Sangay ; N Sakthishree G ; T Sushruthan [All Authors](#)

4 [Full Text Views](#)     

Abstract Abstract:

The proposed collision warning system can be added to various automotive applications. With this precrash detection system, a vehicle can detect and know the position, acceleration, speed, and movement of other vehicles up to certain kilometers under various situations. The situation may be a blind spot, vehicle stopped in a place hidden from view, or around a corner blocked by other vehicles. A vehicle prototype is created and tested under various conditions. The system will use a sonar sensor to identify impediments, and an Arduino is used to apply emergency braking when the situation arises. The device also will provide options for speed control to reduce damage or to avoid collision with another vehicle. Consequently, a fully accessible automated collision avoidance system is suggested. As a result, every car can now have an automated smart speed control and braking system so that it can help to avoid collision and proteus software was used in this study to create a prototype model.

ABSTRACT

In recent years, especially since the COVID-19 pandemic, education systems have experienced a sudden transition toward online learning. Online learning, also referred to as e-learning or digital learning, has become the new norm after universities and schools around the globe had to shut down suddenly without prior planning. In the corporate world, several online courses that train toward finding jobs are offered online to enable professionals to upgrade their skills and increase their competency. Online learning can be described as the method of teaching learning wherein all the stakeholders including the tutors, students, and the teaching resources are connected via the internet. This method of education makes use of content storage and uses internet-based technologies through which students communicate with teachers as well as with fellow students. This method of learning is fully dependent on the web or internet for its full execution. However, despite all the services provided by the internet for uninterrupted learning, it is also inevitably the platform of all security threats. Owing to the emergency transition to e-learning, educational institutions, teachers, and students were not equipped to handle the situation. Not all students or teachers had proper laptops or stable internet connections. Even educational institutions were not prepared with proper cybersecurity measures. As a result, online classrooms were at increased risks of cyberattacks. Popular platforms of online learning and video conferencing including Moodle, Google Classroom, Blackboard, Coursera, Google Meet, and Zoom, all had various threats, too. The different security threats could directly or indirectly affect online learning systems include virus threats, hacking, SQL injection, phishing attacks, brute force attack, denial of service, spyware threats, and social network threats, most from external intruders. Security risks also include MITM attack, cross-site request forgery (CSRF), masquerade, cross site scripting (XSS), IP spoofing, rootkits, ARP cache poisoning, session hijacking, stack-smashing attacks, or session prediction. This survey of various possible threats or risks involved in online learning may be an eye-opener for e-learning providers in implementing security strategies. As digital learning will continue to be a necessity from now on, even end users like students and teachers will have better awareness about the potential threats within the platform they are using for digital learning and take precautionary measures. Educational institutions can consider steps to improve security like improving authentication, authorization, and confidentiality, or training security professionals. This chapter will also aid researchers who are trying to develop better online learning systems for the next generation; systems that are not only more user friendly but also more secure and safer personal learning environments that assures the security of online classroom sessions or assessments.

ARTICLE INFO **ABSTRACT**

Keywords: Internet of Things; Squawfish; Pattern recognition algorithm; Chicken Swarm Optimization; User; Machine learning

The environment sensing and image processing are integrated with the Internet of Things (IoT), which is considered a novel platform for monitoring plant health. The main limitation of the existing approaches is the inability to accurately classify root diseases. This paper presents a novel model for recognizing the root infection in the IoT network. The goal of the proposed model is to enhance crop productivity by controlling the irrigation platform at less cost. Here, the fitness function is defined as the combination of the root infection and the plant health. The Squawfish optimization algorithm (SQO) and chicken swarm optimization (CSO) are employed for recognizing the root disease. The Squawfish optimization is done using RSO, which is focused by integrating the fitness optimization algorithm (FOA) and chicken swarm optimization (CSO). This model assists to mine the hidden knowledge from images and attains high accuracy, while classifying the disease present in the roots. Here, IoT is implemented wherein the IoT nodes help to accumulate the information of roots and send this information to the base station (BS), wherein the classification of root disease is achieved. The RSO-based Squawfish outperformed with the highest energy of 0.176 J, Packet delivery ratio (PDR) of 0.500, smallest distance of 12.476 m, highest accuracy of 91.2%, sensitivity of 93.1% and specificity of 90.9%.

1. Introduction

IoT was firstly modelled by Kevin Ashton in 1990 (Madhavan, Lake, Laksh, & Lake, 2013). It represents a network, which is connected to several objects along with the internet and provides an interface amidst objects (Sankar & Sathiyamoorthy, 2016). The devices of IoT possess less power, less processing and less memory aptitude (Owaidh, Ghaleb, Thomson, Al Dulai, & Buchanan, 2020). IoT represented a novel online system. The IoT aims to facilitate the objects and can exchange data and adopt decisions by itself. Utilizing network protocols like IPv6, the Internet of Things (IoT) network connects various devices. It consists of a sensing area, a network component, and data storage (Mousavaghi et al., 2021; Zhang, 2020). The network may play an imperative part in IoT while sending the data of sensor considering numbers. Here, one can attain two things, namely service quality and energy efficiency (Dindarevic, Carpio, Iskan, & Mastip-Fermin, 2019; Anandkumar, 2020; Verma, Alami, Rashid, Shrivastava, Radhwan, & Clamouni, 2023). The IoT represent the accumulation of techniques, which comprises several hardware and software units (Alrishi, Alrishi, Shantir, & Gupta, 2020; Alrishi, 2021). It offers several emerging solutions, and is devoted on the basis of ICT for establishing communication amidst things. The IoT enabled the technologies, like ZigBee, RFID, Wi-Fi, and RPL and so on (Ouedj, Nourou, Zikri, Vasilakis, & Kim, 2020). The RPL establishes (RPL) for transmitting data amidst nodes. The routers transmit data amidst DODAG root through the intermediary node (Gavri et al., 2014, 2017; Kowari, Uddin, & Kauri, 2012). The RPL routers hold up the arbitrary and grid topologies, and it effectively handles downward and upward data traffic in the network (Liu, 2019; Sankar, Senthilvanan, Laksh, Somala, & Chikankuru, 2020; Shende & Saurir, 2020; Shende et al., 2020, 2022).

Agriculture is considered an imperative job in several developing nations across the world. In various nations, the level of economy discovers the production of agriculture. Agriculture is considered to be crucial to the development of a country's economy. In these days, the population of the world is radically escalating. Hence, classical agricultural technologies do not handle yield up to population needs. Smarter agriculture is a current inclination in this period that employs smarter technologies to maximize the productivity of farmland (Owari et al., 2020; Sankar et al., 2020). The discovery of the disease in plants' roots, by considering the images is a major issue (Sankar, 2016; Yasar, Adilov, Wills, Frensch, & Fritzsche, 2019). Using contemporary technology, the capturing of images is done with High Definition (HD) cameras. The sophisticated techniques for the classification of root disease
