TESTIMONIAL BY PLACED STUDENTS

My experience at SKCET was very great and unforgettable. Every possible opportunity is created here from which we can get trained, learn from our mistakes and be a better person at each step. Each and every faculty members here helped us gather all the knowledge, choose best career path and achieve our goals. Best innovations come from small ideas, SKCET is the place where we can put our thoughts into process and attain the best result out of it. I am thankful to SKCET placement cell and all the faculty members who gave guidance to choose my future path and helped me improve myself not only in academics but also in every aspect. I am extremely happy that I was able to be part of an institution like SKCET where we can learn and develop our skills technically. Thanks to my parents, SKCET Management, Principal and the entire SKCET family for the wonderful opportunity.

TESTIMONIAL BY PLACED STUDENTS

The most important four years of my career started from here at SKCET! My journey of my college life was splendid and kudos to SKCET for making it a meaningful part of my life. It was filled with lots of happiness, motivations and life lessons and most importantly with huge amount of fun each single day. The dynamic professors here put their trust on the students to the fullest and continuously support us to reach great heights! I love the infrastructure of SKCET which gives lots of loving moments to cherish throughout. I would like to specially thank the placement cell for guiding me and providing me a good platform for my career. On the whole SKCET pages of my life diary stand evergreen and my relationship with this place will remain forever! My wholehearted thanks for everything my lovable SKCET! Overall SKCET has not only helped me grow carrier-wise but I have also gained the values and memories, I will cherish for life.

Cement-based materials are increasingly and widely employed in infrastructure development; however, they pollute our environment by generating carbon dioxide, which is detrimental to our civilization. In self-cleaning concrete, photocatalysts accelerate the decomposition of organic particles; thus, photocatalytic degradation of gaseous pollutants could reduce pollution. The incorporation of photocatalytic components enhanced the mechanical self-cleaning properties of cement mortar. In this study, 4–6 percent by weight of rutile TiO₂ was added to mortar, and the results were compared to those of a control sample. On the proposed mortar cubes, both fresh mortar and hardening mortar experiments were conducted. Because the initial and final setting times of TiO₂ differ from those of conventional cement mortar, the surplus TiO₂ water-cement ratio had to be modified. The adaptability of the sol-gel method enables the use of various process parameters to influence the properties of the produced TiO₂ nanoparticles. The compressive strength was calculated for 7, 14, 21, and 28 days, and an ultrasonic velocity test was performed after 28 days. On mortar samples, acid and sulfate attack experiments were performed. The M-3 mortar mixture containing 5% rutile exhibited the highest level of strength compared to the other mixtures. The M-3 exhibits a strength that is 10.96% greater than that of the control mix. The impact of acid and sulfate attack on the strength of mix M-2 is relatively modest in comparison to other mixtures. Using RhB (rhodamine color) discoloration under UV light, such as sunlight, the photocatalytic mortar is concentrated; a typical test for self-cleaning cementitious materials reveals the presence of more photocatalytic material, which yields the best results.

Dr. C. Samson Jerold Samuel, Associate Professor, Mechanical Engineering has published a scientific article entitled ‘Study on the Behavior of Self-Cleaning Impregnated Photo catalyst (TiO₂) with Cement Mortar’ in Advances in Materials Science and Engineering – A Hindawi Publication. It is a Scopus Indexed Journal with an impact Factor 2.098. The Journal is also listed in Anna University Annexure 1.

ABSTRACT
Reconfigurable antennas play a crucial role in contemporary wireless communication. Recent technological advances manifest the need for optimal antenna design. Optimization algorithms have been gaining in popularity over the past two decades due to their adaptability and efficiency. These algorithms are the keys to designing a compact and highly efficient antenna. Moreover, the implementation of optimization algorithms in antenna design thrives on better performance characteristics. The optimization technique adopted is governed by the parameters and the application specifications. This chapter depicts a technical review of commonly used optimization algorithms for performance enhancement in reconfigurable antennas.
