Curriculum & Syllabi

Regulation 2022

2023-2027 Batch

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

SRI KRISHNA COLLEGE OF ENGINEERING AND TECHNOLOGY

An Autonomous Institution | Approved by AICTE | Affiliated to Anna University | Accredited by NAAC with A++ Grade

Kuniamuthur, Coimbatore – 641008

Phone : (0422)-2678001 (7 Lines) | Email : info@skcet.ac.in | Website : www.skcet.ac.in

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

(Batch 2023-2027)

VISION OF THE INSTITUTION

- To Produce Globally Competitive Engineers with High Ethical Values and Social Responsibilities

MISSION OF THE INSTITUTION

- To impart the highest quality state-of-the-art technical education by providing impetus to innovation, research, and development and empowering students with entrepreneurship skills
- To instil ethical values, imbibe a sense of social responsibility, and strive for societal well-being
- To identify the needs of society and offer sustainable solutions through outreach programs

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

VISION OF THE DEPARTMENT

- To prepare professionals with high technical, research and entrepreneurial skills as well as ethical values who will contribute to the computational world

MISSION OF THE DEPARTMENT

- To develop human resources with the ability and attitude to adapt to emerging technological changes through academic and research-oriented events
- To identify current socio, economic problems of national and international significance and provide solutions through competency centers
- To impart ethics, social responsibilities and necessary professional, entrepreneurial and leadership skills through student lead activities

I.	PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)
To enable graduates to	
PEO 1	Be successful in their career in industries associated with Computer Science and Engineering
PEO 2	Comprehend, analyze, design, and create novel products and solutions for the real-life problems
PEO 3	Possess professional and ethical attitude, effective communication skills, team working skills, multi-disciplinary approach, and an ability to relate engineering issues to broader social context
PEO 4	Exhibit leadership qualities and progress through life-long learning

II.	PROGRAMME OUTCOMES (POs)
PO 1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
PO 2	**Problem Analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
PO 3	**Design/ Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
PO 4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
PO 5	**Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
PO 6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice
PO 7	**Environment and Sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
PO 8	**Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice
PO 9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings
PO 10	**Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
PO 11	**Project Management and Finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary

	environments
PO 12	**Life-long Learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change

III. PROGRAMME SPECIFIC OUTCOMES (PSOs)

The Graduates of B.E – CSE programme will be able to:

PSO 1	Apply the fundamental knowledge for problem solving and analysis as well as conduct investigations in computer science and engineering for sustainable development
PSO 2	Design and develop the solutions for real time problems and implement them by using modern software tools in lieu of deploying them in the society for its growth
PSO 3	Communicate effectively, adopt ethics and engage in life-long learning

IV. MAPPING OF PEOs WITH POs

PEO	POs											
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12
1	3	3	3	2	2	3	-	1	1	1	2	1
2	3	3	3	3	3	2	1	1	1	2	2	2
3	-	-	-	-	-	3	3	3	2	2	2	2
4	-	-	-	-	-	-	-	-	3	3	3	3
	1- low, 2 - medium, 3 - high, '-' - no correlation											

V. MAPPING OF PEOs WITH PSOs

	PSO 1	PSO 2	PSO 3
PEO 1	2	2	2
PEO 2	3	1	-
PEO 3	1	3	2
PEO 4	-	-	3

AUTONOMOUS CURRICULUM AND SYLLABI

Regulations 2022 (2023-2027 Batch)

SEMESTER I							
S.No	Course Code	Course Title	L/T/P	Contact Hrs/Wk	Credits	Ext/Int	Cat.
Theory (Internal 40 Marks & External 60 Marks)							
1	23MA101	Mathematics - I	3/1/0	4	4	60/40	BSC
2	23EC111	Digital Logic Design and Computer Architecture	3/1/0	4	4	60/40	ESC
3	23TA101	Heritage of Tamils / தமிழர் மரபு	1/0/0	1	1	60/40	HSMC
Theory with Practical (Internal 50 Marks & External 50 Marks)							
4	23IT101	Application Development Practices	1/0/4	5	3	50/50	ESC
5	23CS101	Problem Solving using C++	1/0/4	5	3	50/50	ESC
6	23EN101	Oral and Written Communication Skills	2/0/2	4	3	50/50	HSMC
Mandatory Course (Internal 100 Marks)							
7	23MC101	Mandatory Course – I (Induction Programme)	3 Weeks				MC
TOTAL				23	18	700	

SEMESTER II							
S.No	Course Code	Course Title	L/T/P	Contact Hrs/Wk	Credits	Ext/Int	Cat.
Theory (Internal 40 Marks & External 60 Marks)							
1	23MA201	Mathematics - II	3/1/0	4	4	60/40	BSC
2	23AS101	Applied Science	4/0/0	4	4	60/40	BSC
3	23TA201	Tamils and Technology / தமிழரும் தொழில்நுட்பமும்	1/0/0	1	1	60/40	HSMC
Theory with Practical (Internal 50 Marks & External 50 Marks)							
4	23CS201	Data Structures and Algorithms	1/0/4	5	3	50/50	PCC
5	23CD201	Database Management	1/0/4	5	3	50/50	PCC

S.No	Course Code	Course Title	L/T/P	Contact Hrs/Wk	Credits	Ext/Int	Cat.
		Systems					
6	23CY201	Java Programming	1/0/4	5	3	50/50	PCC
7	23CD202	Object Oriented Analysis and Design	3/0/2	5	4	50/50	PCC
Practical (Internal 60 Marks & External 40 Marks)							
8	23AS102	Applied Science Laboratory	0/0/4	4	2	40/60	BSC
Mandatory Course (Internal 100 Marks)							
9	23MC102	Mandatory Course - II (Environmental Sciences)	1/0/0	1	0	0/100	MC
		TOTAL		**34**	**24**	**900**	

SEMESTER III							
S.No	**Course Code**	**Course Title**	**L/T/P**	**Contact Hrs/Wk**	**Credits**	**Ext/Int**	**Cat.**
Theory (Internal 40 Marks & External 60 Marks)							
1	23MA301	Mathematical Foundation for Computer Science	3/1/0	4	4	60/40	BSC
Theory with Practical (Internal 50 Marks & External 50 Marks)							
2	23IT301	Web Technology using React	1/0/4	5	3	50/50	PCC
3	23CD301	Software Product Design	3/0/2	5	4	50/50	ESC
4	23CY202	Operating Systems	3/0/2	5	4	50/50	PCC
5	23CS301	Advanced Java Programming	1/0/4	5	3	50/50	PCC
6	23AD402	Design and Analysis of Algorithms	1/0/4	5	3	50/50	PCC
Mandatory Course (Internal 100 Marks)							
7	23MCXXX	Mandatory Course - III	1/0/0	1	0	0/100	MC
			TOTAL	**30**	**21**	**700**	

S.No	Course Code	Course Title	L/T/P	Contact Hrs/Wk	Credits	Ext/Int	Cat.
SEMESTER IV							
Theory (Internal 40 Marks & External 60 Marks)							
1	23GE301	Universal Human Values	3/0/0	3	3	60/40	HSMC
2	23CS401	Theory of Computation	3/1/0	4	4	60/40	PCC
3	23CS402	Algorithms of Internet	3/1/0	4	4	60/40	PCC
Theory with Practical (Internal 50 Marks & External 50 Marks)							
4	23CS403	Computer Networks	3/0/2	5	4	50/50	ESC
5	23AD403	Managing Cloud and Containerization	1/0/4	5	3	50/50	PCC
Practical (Internal 60 Marks & External 40 Marks)							
6	23IT402	Web Frameworks using Rest API	0/0/4	4	2	40/60	PCC
7	23ME305	Design Thinking and Idea Lab	0/0/2	2	1	40/60	HSMC
Mandatory Course (Internal 100 Marks)							
8	23MCXXX	Mandatory Course - IV	1/0/0	1	0	0/100	MC
			TOTAL	**28**	**21**	**800**	

S.No	Course Code	Course Title	L/T/P	Contact Hrs/Wk	Credits	Ext/Int	Cat.
SEMESTER V							
Theory (Internal 40 Marks & External 60 Marks)							
1	23IT501	Cryptography and Network Security	3/1/0	4	4	60/40	PCC
2	23CS501	Mobile and Edge Computing	3/0/0	3	3	60/40	PCC
Theory with Practical (Internal 50 Marks & External 50 Marks)							
3	23ITC01	Internet of Things	2/0/2	4	3	50/50	PCC
4	23CS502	Software Testing	1/0/4	5	3	50/50	PCC
5	23XXXX	Professional Elective - I	2/0/2	4	3	50/50	PEC
6	23XXXX	Professional Elective - II	2/0/2	4	3	50/50	PEC
Mini Project (Internal 100 Marks)							
7	23CS503	Application Development	0/0/6	6	3	0/100	PRJ
		TOTAL		**30**	**22**	**700**	

SEMESTER VI							
S.No	**Course Code**	**Course Title**	**L/T/P**	**Contact Hrs/Wk**	**Credits**	**Ext/Int**	**Cat.**
Theory (Internal 40 Marks & External 60 Marks)							
1	23CSC03	Quantum Computing	3/0/0	3	3	60/40	PCC
Theory with Practical (Internal 50 Marks & External 50 Marks)							
2	23CSC04	Principles of Compiler Design	3/0/2	5	4	50/50	PCC
3	23CSC02	Machine Learning Techniques	2/0/2	4	3	50/50	PCC
4	23ADC01	Artificial Intelligence and Its Application	2/0/2	4	3	50/50	PCC
5	23XXXX	Professional Elective – III	2/0/2	4	3	50/50	PEC
6	23XXXX	Professional Elective - IV	2/0/2	4	3	50/50	PEC
Mini Project (Internal 100 Marks)							
7	23CS601	Capstone Project	0/0/6	6	3	0/100	PRJ
TOTAL				30	22	700	

SEMESTER VII							
S.No	**Course Code**	**Course Title**	**L/T/P**	**Contact Hrs/Wk**	**Credits**	**Ext/Int**	**Cat.**
Theory (Internal 40 Marks & External 60 Marks)							
1	23XXXX	Open / Emerging/ Industrial Elective- I	3/0/0	3	3	60/40	OEC
2	23XXXX	Open / Emerging/ Industrial Elective- II	3/0/0	3	3	60/40	OEC
3	23XXXX	Open / Emerging/ Industrial Elective- III	3/0/0	3	3	60/40	OEC
Theory with Practical (Internal 50 Marks & External 50 Marks)							
4	23XXXX	Professional Elective - V	2/0/2	4	3	50/50	PEC
5	23XXXX	Professional Elective - VI	2/0/2	4	3	50/50	PEC
Project (Internal 60 Marks & External 40 Marks)							
6	23CS701	Project - I	0/0/6	6	3	40/60	PRJ
Internship (Internal 100 Marks)							
7	23CS702	Employability Enhancement Skills (Internship)	28 Days		2	0/100	PRJ

	STRUCTURE FOR UNDERGRADUATE ENGINEERING PROGRAM		
S. No.	**Course Work - Subject Area**	**AICTE Suggested Credits**	**SKCET Credits (161)**
1	Humanities and Social Sciences (HS), including Management;	**16***	**9**
2	Basic Sciences (BS) including Mathematics, Physics, Chemistry, Biology;	**23***	**18**
3	Engineering Sciences (ES), including Materials, Workshop, Drawing, Basics of Electrical/Electronics/Mechanical/Computer Engineering, Instrumentation;	**29***	**18**
4	Professional Subjects-Core (PC), relevant to the chosen specialization/branch; (May be split into Hard (no choice) and Soft (with choice), if required	**59***	**65**
5	Professional Subjects – Electives (PE), relevant to the chosen specialization/ branch;	**12***	**18**
6	Open Subjects- Electives (OE), from other technical and/or emerging subject areas;	**9***	**9**
7	Project Work, Seminar and/or Internship in Industry or elsewhere.	**15***	**23**
8	Mandatory Courses (MC)	**Non-credit**	
	Total	163	160

Minor Variations is allowed as per need of the respective disciplines

HUMANITIES & SOCIAL SCIENCES INCLUDING MANAGEMENT (9 Credits)

S.No.	Course Code	Course Title	L/T/P	Contact hrs./Wk.	C	Ext/ Int	Cat.

5	23CS801	Project - II	0 / 0 / 24	24	12	60/40	PRJ

PROFESSIONAL ELECTIVE COURSES: VERTICALS				
Vertical I - ML Engineering	**Vertical II - Data Analyst with ML Essentials**	**Vertical III - Cloud IT Administration**	**Vertical IV - Cybersecurity**	**Vertical V – Full Stack Software Development (Minor)**
Exploratory Data Analysis (EDA) using Python	Data Storytelling and Visualization	Implementing and Administering Enterprise Networks	Implementing and Administering Enterprise Networks	Managing and Querying Database (RDBMS) MySQL / Postgre SQL
Statistical Methods and Basic Machine Learning Models	Exploratory Data Analysis (EDA) using Python	Linux System Administration	Linux System Administration	Java / Python: Object-Oriented Programming
Advanced ML Techniques	Problem solving with Analytical & Design Thinking	Information Security Systems	Information Security Systems	Web Development and UI/UX Essentials
NLP	PowerBI	Low-Code No-Code Application Building	Cloud Computing and Containerized Virtual Infrastructure	Build Single-Page Applications using React
Computer Vision	Statistical Methods and Machine Learning Models	Virtualization, Cloud Computing and SysOps	Penetration Testing	Build Back-end Application using Spring Boot / FAST API
GenAI Advanced Prompt Engineering & LLMs	GenAI Advanced Prompt Engineering & LLMs	Continuous Monitoring and Observability (AWS)	Security Operations of Information systems	GenAI Advanced Prompt Engineering & LLMs

INTERN (2 Credits)							
S. No.	Course Code	Course Title	L/T/P	Contact hrs./Wk.	C	Ext/ Int	Cat.
1	23CS702	Employability Enhancement Skills (Internship)	28 Days		2	0/100	PRJ

VALUE ADDED COURSES (Based on student's interest)						
S. No.	Course Code	Course Title	L/T/P	Contact hrs./Wk.	C	Sem
1	23VA200	Cassandra	1 / 0 / 0	1	1	III
2	23VA201	MongoDB	1 / 0 / 0	1	1	IV
3	23VA202	Edge Computing	1 / 0 / 0	1	1	V
4	23VA203	PyCharm	1 / 0 / 0	1	1	VI
5	23VA204	Generative AI	1 / 0 / 0	1	1	VI

MANDATORY COURSES (01) (Courses conducted either by internal faculty or through MOOCs)					
S. No.	Course Code	Course Title	L/T/P	Contact hrs./Wk.	C
1	23MC101	Induction Programme			0
2	23MC102	Environmental Sciences	1 / 0 / 0	1	0

PEC	**:** Professional Elective Courses		

Definition of Credit:

L – Lecture	1 Hr. Lecture (L) per week	1 credit
T – Tutorial	1 Hr. Tutorial (T) per week	1 credit
P - Practical/Practice (Project and Industry based Courses)	1 Hr. Practical (P) per week	0.5 credit

SEMESTER – I

23MA101	MATHEMATICS I (COMMON TO ALL BRANCHES)	3/1/0/4

Nature of Course	J (Problem Analytical)	
Pre requisites	-	

Course Objectives:

1	To use logical notation to define the fundamental data types and structures used in computer algorithms and systems.
2	To use the concepts of graph theory in practical situations.
3	To acquire thorough knowledge of fundamental notions of proof's and its application in Cryptography.
4	To analyse data pertaining to discrete and continuous random variables to interpret the results.
5	To impart the knowledge of counting principles, to think critically and apply it in real world problems.

Course Outcomes(Theory)

Upon completion of the course, students shall have ability to

C101.1	Recall the basic concepts of logical laws, structures and probability.	[R]
C101.2	Understand the concepts of proof techniques, structures and random variables.	[U]
C101.3	Apply *the logical and foundational structures of mathematics with an emphasis on* writing proofs.	[AP]
C101.4	Apply the concepts of graph and number theory in cryptography.	[AP]
C101.5	Apply the probability concepts in transition from real problem to a probabilistic model.	[AP]

Course Contents:

MODULE I : LOGICAL PROOF'S & FUNCTIONS (20 Hrs)

Proofs: Definitions - Proof by cases - Proof by contradiction - Logical formulas - Propositions - Truth table - Logical operators - Tautologies and Contradictions – Contrapositive - Equivalences and implications - Predicates - Free and bound variables – Quantifiers - Universe of discourse - **Sets:** Basic sets - Operations on Sets – Law on Sets (without proof) - Cartesian product of sets. **Relations:** Binary relation -Types of relations and their properties - Relational matrix and graph of a relation - Equivalence relations - Partial ordering relation **Functions:** Classifications of functions – Induction - Ordinary induction and Strong induction - Recursive data types - Definition of recursive and structural induction.

MODULE II : NUMBER THEORY & GRAPH THEORY (20 Hrs)

Number Theory: Divisibility - Greatest common divisor - Euclid's algorithm - Prime numbers - Fundamental theorem of arithmetic - Modular arithmetic - Remainder arithmetic - Multiplicative inverses and cancelling - Relatively prime - Euler's theorem.- Chinese Reminder Theorem **Graph Theory:** Vertices and Degrees - Types of graphs - Handshaking theorem - Adjacency matrices - Walks and paths - Connectivity - Isomorphism - Directed acyclic graphs and scheduling –Matchings - The Stable marriage problem –Forests and trees - Spanning trees - Minimum weight spanning trees – Prim's algorithm - Kruskal's algorithm..

MODULE III : COUNTING & PROBABILITY (20 Hrs)

Sums and Asymptotics - Sums of Powers - Harmonic Numbers - Asymptotic Notation -The

23EC111	DIGITAL LOGIC DESIGN AND COMPUTER ARCHITECTURE	3/1/0/4
Nature of Course	G (Theory Analytical)	
Pre requisites	Nil	

Course Objectives:

1.	To understand number systems, logic gates and boolean functions
2.	To familiarize combinational and sequential logic circuits
3.	To learn the basic structure and operations of a computer
4.	To understand control unit design and memory organization
5.	To discuss pipelining and parallelism and multicore architecture
6.	To explore the I/O communication and interfacing

Course Outcomes

Upon completion of the course, students shall have ability to

C111.1	Implement logic circuits and simplify boolean functions	[AP]
C111.2	Analyze combinational and sequential logic circuits	[A]
C111.3	Interpret the design of control unit	[U]
C111.4	Illustrate cache memory and virtual memory	[AP]
C111.5	Examine parallelism in multicore and hazards in pipelining	[AP]
C111.6	Distinguish the different ways of communication with I/O devices	[U]

MODULE I Digital logic   **20 Hours**

Number Systems - Boolean algebra – Minimization of Boolean Functions using Karnaugh Maps – Implementation of Logic Circuits using Gates – **Combinational Logic:** Adder, Subtractor, Multiplexer, Demultiplexer, Encoders, Decoders – **Sequential Logic:** Flip flops, Registers, Counters – Finite State Machines

MODULE II Computer Organization   **20 Hours**

Basic Operational Concepts - Instruction Format – Instruction Sets - Addressing Modes - Design of CPU - Hardwired Control unit design - Micro Programmed Control unit design – Memory organization - Programmable Logic Array - Programmable Array Logic - Cache memory - Virtual Memory – Multicycle MIPS

MODULE III Pipelining and Communication   **20 Hours**

Pipelining: Basic Concepts, Data Hazards, Instruction Hazards, Influence on Instruction Sets, Data Path and Control Consideration, Superscalar Operation, Instruction Level Parallelism, Multicore Architecture. **I/O Communication:** Handshaking, Buffering, I/O techniques, Buses, Interrupts

23TA101	HERITAGE OF TAMILS / தமிழர் மரபு	1/0/0/1
Nature of Course:	C (Theory Concept)	
Pre requisites:	NIL	

Course Objectives:		
1	To know various concepts of Tamil Language families.	
2	To know about the essentialities of Heritage.	
3	To understand the Aram concepts of Tamils and the cultural influence.	

Course Outcomes:

Upon completion of the course, students shall have ability to

C101.1	Know about the language families in India, impact of religions and the contribution of Bharathiyar and Bharathidhasan.	[U]
C101.2	Observe the growth of sculpture, making of musical instruments and the role of temples in socio and economic lives.	[U]
C101.3	Understand the significance of folklore and martial arts.	[U]
C101.4	Learn the sangam literature, sangam age and overseas conquest of Cholas.	[U]
C101.5	Understand the contribution of Tamils to Indian Freedom Struggle, role of Siddha medicine and print history of Tamil Books.	[U]

Course Contents:

Language and Literature: Language Families in India - Dravidian Languages – Tamil as a Classical Language - Classical Literature in Tamil – Secular Nature of Sangam Literature – Distributive Justice in Sangam Literature - Management Principles in Thirukural - Tamil Epics and Impact of Buddhism & Jainism in Tamil Land - Bakthi Literature Azhwars and Nayanmars - Forms of minor Poetry - Development of Modern literature in Tamil - Contribution of Bharathiyar and Bharathidhasan.

Heritage - Rock Art Paintings to Modern Art – Sculpture: Hero stone to modern sculpture - Bronze icons - Tribes and their handicrafts - Art of temple car making - - Massive Terracotta sculptures, Village deities, Thiruvalluvar Statue at Kanyakumari, Making of musical instruments - Mridhangam, Parai, Veenai, Yazh and Nadhaswaram - Role of Temples in Social and Economic Life of Tamils. **Folk And Martial Arts:** Therukoothu, Karagattam, Villu Pattu, Kaniyan Koothu, Oyillattam, Leather puppetry, Silambattam, Valari, Tiger dance - Sports and Games of Tamils.

Thinai Concept Of Tamils - Flora and Fauna of Tamils & Aham and Puram Concept from Tholkappiyam and Sangam Literature - Aram Concept of Tamils - Education and Literacy during Sangam Age - Ancient Cities and Ports of Sangam Age - Export and Import during Sangam Age - Overseas Conquest of Cholas. Contribution of Tamils to Indian national movement and indian culture: Contribution of Tamils to Indian Freedom Struggle - The Cultural Influence of Tamils over the other parts of India – Self-Respect Movement - Role of Siddha Medicine in Indigenous Systems of Medicine – Inscriptions & Manuscripts – Print History of Tamil Books.

23IT101	APPLICATION DEVELOPMENT PRACTICES	1/0/4/3
Nature of Course	F (Theory programming)	
Pre requisites	Nil	

Course Objectives:

1.	To discuss the essence of agile development methods.
2.	Ability to understand and apply Scrum framework.
3.	To set up and create a GitHub repository.
4.	To impart the knowledge of web application development platforms.
5.	To create interactive websites using HTML, CSS.
6.	To recognize the user experience design methodologies like Java script for responsive web design.

Course Outcomes

Upon completion of the course, students shall have ability to

C101.1	Relate the concepts of agile software engineering and its advantages in software development.	[R]
C101.2	Demonstrate the roles and responsibilities of Scrum, Lean Software Development and how to setup the GitHub repository.	[U]
C101.3	Analyze the working model and learn basic web concepts to develop Static and Dynamic websites.	[A]
C101.4	Utilize the knowledge of HTML, CSS and Bootstrap using forms to build modern interactive web applications.	[AP]
C101.5	Develop dynamic web pages using HTML5 with validation using Java Script objects and by applying different event handling mechanisms.	[AP]

Course Contents:

Module - I: **5 Hours**

History of Traditional Software Development Model, Software Development Model and SDLC, "Waterfall Model" – An Overview, Waterfall or Sequential Based Development Model, "Real Life" – Waterfall Model, "Waterfall Model" – Advantages, "Waterfall Model" – Disadvantages, Agile Software Development – Definition, Agile Development Model, Graphical Illustration of Agile Development Model, Why use Agile?, Agile Manifesto and Principles, 12 Principles of Agile Methods, Agile Values, What is NOT an Agile software development?, Foundation of an Agile software development Method, Common Characteristics of Agile Methods, Agile Methods and Practices, When to use Agile Model?, Advantages of Agile Model, Disadvantages of Agile Model, Difference between Agile and Waterfall Model, Agile – Myths and Reality, Agile Market Insight. Introduction to SCRUM, Scrum Roles and Responsibilities, Scrum Core Practices and Artifacts, User Story, Sprint, Release Planning Meeting, Sprint Planning Meeting, Daily Scrum Meeting (Daily Stand up), Sprint Review Meeting, Retrospective, Product Backlog, Sprint Backlog, Burn-Down Chart, Velocity, Impediment Backlog. Definition of "Done", Splitting User Story into Task, Why to Split User Story into Task?, Guidelines for Breaking Down a User Story into Tasks, Examples of Scrum Task Board, Planning Poker®, Planning Poker - Process/Steps, What are Story Points?, How do We Estimate in Story Points?, What Goes into Story Points? Introduction to Extreme Programming, The Rules of Extreme Programming, Extreme Programming (XP) – Principles, Extreme Programming (XP) – Key Terms, Introduction to Lean Software Development, Principles of Lean Software Development, What is Kanban? Introduction to Git - Getting a Git Repository, Recording Changes to the Repository, Viewing the Commit History, Undoing Things, Working with Remotes, Tagging, Git Aliases, Git Branching, Branches in a Nutshell, Basic Branching and Merging, Branch Management, Remote Branches, Rebasing. Introduction to GitHub – Introduction, Set up Git, Create a repository, GitHub Flow, Contribution to Projects, Communicating on GitHub. Linux Basic Commands - Linux Basic Commands, Linux File Permissions, Basic System Administration, Process Management, Archival. Linux Shell Script - Shell Basics, Writing first script,

Conditional statements, Loops, Command line arguments, Functions & file manipulations, Background processes, Scheduling processes -At, batch & Cron -Networking.

Module - II: **5 Hours**
HTML Basics - Understand the structure of an HTML page, New Semantic Elements in HTML 5, Learn to apply physical/logical character effects, Learn to manage document spacing. Tables - Understand the structure of an HTML table, Learn to control table format like cell spanning, cell spacing, border. List - Numbered List, Bulleted List, Working with Links, Understand the working of hyperlinks in web pages, Learn to create hyperlinks in web pages, Add hyperlinks to list items and table contents. Image Handling - Understand the role of images in web pages, Learn to add images to web pages, Learn to use images as hyperlinks. Frames - Understand the need for frames in web pages, Learn to create and work with frames. HTML Forms for User Input - Understand the role of forms in web pages, Understand various HTML elements used in forms, Single line text field, Text area, Check box, Radio buttons, Password fields, Pull-down menus, File selector dialog box. New Form Elements - Understand the new HTML form elements such as date, number, range, email, search and data list, Understand audio, video, article tags.

Module - III: **5 Hours**
Introduction to Cascading Style Sheets - What CSS can do, CSS Syntax, Types of CSS. Working with Text and Fonts - Text Formatting, Text Effects, Fonts. CSS Selectors - Type Selector, Universal Selector, ID Selector, Class selector. Colors and Borders – Background, Multiple Background, Colors RGB and RGBA, HSL and HSLA, Borders, Rounded Corners, Applying Shadows in border, Implementing CSS3 in the "Real World" – Modernizr, HTML5 Shims, SASS, and Other CSS Preprocessors, CSS Grid Systems, CSS Frameworks. Introduction to Bootstrap – Introduction, Getting Started with Bootstrap, Bootstrap Basics, Bootstrap grid system, Bootstrap Basic Components, Bootstrap Components, Page Header, Breadcrumb, Button Groups, Dropdown, Nav & Navbars. JavaScript Essentials - Var, Let and Const keyword, Arrow functions, default arguments, Template Strings, String methods, Object de-structuring, Create, apply, prototype, bind method, Spread and Rest operator, Typescript Fundamentals, Types & type assertions, Creating custom object types, function types, Typescript OOPS - Classes, Interfaces, Constructor, Decorator & Spread Operator, Difference == & === , Asynchronous Programming in ES6, Promise Constructor, Promise with Chain, Promise Race.

	Total Hours	**15**

Lab Component:

S. No	List of Experiments
1	Design a web page using HTML basic tags.
2	Develop web site with suitable contents and links.
3	Design web pages using lists and tables.
4	Build a web client-side Login, Registration form and Dashboard with drop down menus.
5	Develop a HTML form and validation using HTML5 features.
6	Create a website using HTML: To embed an image map in a web page. To fix the hot spots. Show all the related information when the hot spots are clicked.
7	Apply style specification in HTML page using CSS.
8	Develop dynamic web application using HTML, CSS and JavaScript.
	Total Hours **30**

23CS101	PROBLEM SOLVING USING C++	1/0/4/3
Nature of Course	K (Problem Programming)	
Pre requisites	NIL	

Course Objectives:

1	To learn the fundamental programming concepts and methodologies which are essential to build good C++ programs.
2	To gain knowledge on control structures and functions in C++.
3	To provide the basic object-oriented programming concepts and apply them in problem solving.
4	To introduce file streams and operations for storing data permanently.
5	To know generic programming paradigm.

Course Outcomes:
Upon completion of the course, students shall have ability to

C101.1	Illustrate the fundamental concepts and methodologies required to develop a program for given problems.	[U]
C101.2	Develop a program for real-time problems with pointers and objects.	[AP]
C101.3	Apply the Constructors, destructors, and Overloading concepts to solve the real-world problems.	[AP]
C101.4	Develop C++ programs with Interfaces, Exception and File processing	[AP]
C101.5	Implement the concepts on file streams, I/O and Lambda Expression.	[AP]

Course Contents:

Module I C++ Programming Fundamentals **5 Hours**
C vs C++, Basic of OOPS, the main () function, Header files, Basic Input and Output (I/O) using cin and cout, Variable, Constant. **Operators:** Arithmetic Operators, Assignment Operators, Relational Operators, Logical Operators, Bitwise Operators, Other Operators, Operator Precedence. Control Statements: if, if...else and Nested if...else, switch case, break and continue, Loops - for loop, while loop, do while loop, goto. **Arrays and Strings:** 1D array, 2D array, Strings, String functions. **Function:** Basics, call by value, call by reference & return by reference, Inline function, overloading Functions, inline Functions, Recursive Functions. **Pointers:** Pointer, Dynamic Memory Allocation.

Module II Object Oriented Concepts **5 Hours**
Classes and Objects, public, private, protected. **Constructors and destructors**: Overloaded Constructor, Copy Constructor, Shallow Copying Deep Copying. **Overloading:** this' Pointer, structs vs Classes, Friends of a class, Operator Overloading, Inheritance, Overloading vs Overriding, Polymorphism, Virtual Functions, Pure Virtual Functions and Abstract Classes.

Module III Files and Generic Programming **5 Hours**
Abstract Classes as Interfaces, Exception, Files, Streams and I/O, STL, Generic Programming, Lambda Expression.

	Total Hours (Theory)	**15 Hours**

Lab Component

S.No.	Lab Exercise
1.	Practice of C Programming using Branching and Iterative constructs.
2.	Programs using arrays and strings.
3.	Programs using Functions.
4.	Programs using Structures and Pointers.
5.	Programs using classes and objects.
6.	Programs using constructor and destructor.
7.	Programs using method overloading, operator overloading and polymorphism concepts.

8.	Programs using friend class.
9.	Programs using virtual functions and abstract class.

23EN101	**ORAL AND WRITTEN COMMUNICATION SKILLS** **(CSE/CSD/CY/IT/AI&DS - SEMESTER I)** **(ECE/EEE/MCT/MECH/CIVIL - SEMESTER II)**	**2/0/2/4**

10.	Programs using inheritance concepts.
11.	Programs using exception handling concept.
12.	Programs using Files.
13.	Mini project

	Total Hours (Lab)	**30 Hours**

Text Books:

1.	E Balagurusamy,"Object Oriented Programming With C++", 4th Edition, Tata McGraw-Hill Education, 2008.

Nature of Course	Theory Skill Based
Pre requisites	Basics of English Language

Course Objectives:

1	To empower students to comprehend different aspects of communication using LSRW skills.
2	To highlight the essential aspects of effective oral & written communication necessary for professional success.
3	To expand the skills of the students in preparing job search artefacts and negotiating their use in GDs and interviews.
4	To enable students to communicate contextually in specific, personal and professional situations with courtesy.
5	To enrich students to carry out day to day communication at the work place to facilitate efficient interpersonal communication.

Course Outcomes:
Upon completion of the course, students shall have ability to

C101.1	Remember and expand writing skills through guided activities.	[R]
C101.2	Apply communication skills in a corporate environment.	[AP]
C101.3	Analyse and collaborate better with colleagues, building stronger professional and personal relationships.	[AN]
C101.4	Apply technical writing skills to write letters, emails and prepare technical documents.	[AP]
C101.5	Analyze and communicate effectively in personal and professional situations.	[AN]

Module I
Reading: Reading techniques -Skimming and scanning - Cloze reading - Reading and understanding technical articles – Reading for detailed comprehension: Email and letters - Reading advertisements - Table completion: Interpreting charts and graphs - Verbal reasoning – Comprehending reviews – Reading and responding to instant messages.

Module II
Writing: Formal letters (Sales letter, calling for quotations, seeking clarification, placing an order, complaint letter, inviting, accepting and declining letters) - Emails - Minutes of meeting - Professional report writing - Proposal writing - Resume / job application letter - Case study.

Module III
Listening: Situational listening - Listening about an experience - Listening about short extracts - Listening an interview - Conversational speaking**. Speaking** : Conversational speaking - Decipher the picture given and answer the question posed along with it - Decipher the mind map given and speak about it - Listen to the questions posed and answer them appropriately.

Lab Components

1	Conversational listening	[U]
2	Speaking - Pictography	[AP]
3	Listening about an experience	[U]
4	Listening to short extracts	[U]
5	Writing - Resume Writing, Job application letter	[AP]
6	Mock interview	[AP]
	Total Hours:	**60**

Text Books:

1	Simply Said: Communicating Better at Work and Beyond by Jay Sullivan
2	Handbook of Technical Writing, Gerald.J. Alred, Charles T. Brusaw, Walter E. Oliu Bedford/St. Martin's Boston publication

3	Study Writing :A Course in Written English for Academic Purposes, Updated Edition, Liz Hamp-Lyons and Ben Heasly, Cambridge University Press.
4	Dr.Praveen Sam and K N Shoba - A course in Technical English by Cambridge University press, 2020.

C101.5										3		3			

23MC101	INDUCTION PROGRAMME (FOR ALL BRANCHES OF B.E / B.TECH/ M.TECH PROGRAMMES)	1/0/0/0
Nature of Course	Induction Programme	
Pre requisites	Nil	

Course Objectives:

1.	To have broad understanding of society and relationships
2.	To nurture the character and fulfil one's responsibility as an engineer, a citizen and a human being
3.	To incorporate meta skills and values

Course Outcomes:
Upon completion of the course, students shall have ability to

C101.1	Explore academic interest and activities	[AP]
C101.2	Work for excellence	[AP]
C101.3	Promote bonding and give a broader view of life and character	[AP]

Course Contents:

PHYSICAL ACTIVITY: Research over the past years has shown Yoga to have stress-relieving powers on students, paving the way for improved academic performance with the practice of asanas, meditation and breathing exercises. To prove these words Yoga classes has been planned in this module.(CO mapping: C101.1, C101.2, C101.3)

CREATIVE ARTS (students can select any one of their choice): Cultural development supports students to understand, feel comfortable with, value and appreciate the potential enrichment of cultural diversity. They should challenge discrimination, whether based on cultural or racial difference. Students should experience cultural traditions embedded in arts, crafts, language, literature, theatre, song, music, dance, sport, Science, technology and travel. Students should develop an appreciation of beauty both in experiencing artistic expression and by exploring their own creative powers. To inculcate those skills they are given a chance to exhibit their talents through painting, sculpture, pottery, music, dance, craft making and so on. .(CO mapping: C101.1, C101.2, C101.3)

UNIVERSAL HUMAN VALUES: Moral development involves supporting students to make considered choices around their behaviour and the values that provide a framework for how they choose to live. Moral development is also learning about society's values, understanding the reasons for them, how they are derived and change; and how disagreements are resolved. Students must consider the consequences of personal and societal decisions on the wider community – local and global- and on the environment and future generations. To acquire this the students are exposed to training to enhance their soft skills. .(CO mapping: C101.1, C101.2, C101.3)

LITERARY AND PROFICIENCY MODULES: Social development helps students to work effectively together, developing the inter-personal skills required to relate positively with their peers and people of all ages. Students must also understand how to participate productively in a diverse and plural society and learn about, and how to effectively engage with societal institutions and processes. They should understand that a person may have different roles and responsibilities within society. To reach this the following aspects are given in the form of Reading, writing, speaking – debate, role play etc. Communication and computer skills. (CO mapping: C101.1, C101.2, C101.3)

LECTURES BY EMINENT PEOPLE: Teaching with Lectures. ... It is essential to see lectures as a means of helping students learn to think about the key concepts of a particular subject, rather

than primarily as a means of transferring knowledge from instructor to student. During the induction period students will attend to Guest lectures by subject experts.(CO mapping: C101.1, C101.2, C101.3)

VISIT TO LOCAL AREAS:Traveling is in fact a way of learning to learn. You are out of your comfort zone and so you must learn to be able to adapt to a new learning environment in a very short time. It also helps in your overall learning as well. In the induction period students will be taken to different places near college to learn new things. Eg.Meditation centre/orphanage/Hospital.(CO mapping: C101.1, C101.2, C101.3)

FAMILIARIZATION TO DEPARTMENT/BRANCH INNOVATION: Hod's of different branches will present about their department followed by department visit to view various facilities available at their department, new innovations from students and faculties etc. .(CO mapping: C101.1, C101.2, C101.3)

SEMESTER – II

23MA201	MATHEMATICS II CSE/IT/AI&DS/CSD/CYBER/EEE/ECE/MCT	3/1/0/4

Nature of Course	J (Problem analytical)
Prerequisites	-

Course Objectives:

1	To study the basic probability concepts
2	To apply mathematical linear programming techniques to solve constrained problems.
3	To formalize the notion of strategic thinking and rational choice by using the tools of game theory
4	To acquaint the student with transform techniques which are used in variety of engineering fields.
5	To introduce the concepts of Group theory

Course Outcomes:
Upon completion of the course, students shall have ability to

C201.1	Recall the concepts of basic probability	[R]
C201.2	Formulate and analyze the existence of solutions to optimization problems	[U]
C201.3	Formulation of modern Probability Theory and think of random variables as an intrinsic need for the analysis of random phenomena.	[AP]
C201.4	To apply game theory in searching, auctioning and trading.	[AP]
C201.5	Apply Fourier transform to discrete time sequence and use of group theory and coding theory in communication.	[AP]

Course Contents

MODULE 1: Probability theory (20 hrs)
Deviation from mean - Markov's inequality – Chebyshev's theorem - properties of variance – sums of random variables – Gambler's ruin - Random walk on graphs - Chebyshev's inequality – Deviation on sum of independent random variables - weak law of large numbers – Van der Waerden's theorem (Statement only) - Chernoff bounds – above the mean and under the mean of Chernoff Bound.

MODULE 2: Linear Programming and Game Theory (20 hrs)
Basics of Linear Programming – Formulations of Linear Programming Problems - Graphical method - Simplex Method - Linear Programming in Matrix Form – Two phase method - Duality - Transportation Problem - Initial Basic Feasible solutions - Optimal solution by MODI method. Game theory: Introduction - Zero-Sum Matrix Games – payoff matrix - The Minimax and Maximin theorem - mixed strategies – graphic solution of games.

MODULE 3: Fourier Analysis & Group Codes (20 hrs)
Fourier series: Half range series – Discrete Fourier transform - Properties: Statement and Problems – Computing using convolution of sequences using Fast Fourier transform – Fourier transforms modulo p and faster integer multiplication. Concept and simple Applications of Groups, subgroups, cosets – linear codes – error correcting codes – hamming codes – perfect codes.

	Total Hours:	**60 Hrs**

	APPLIED SCIENCE	**L/T/P/C**
23AS101	**(Common to B.E. CSD, CSE, CSE (CYBER SECURITY), ECE, EEE, MCT & B.Tech. AI&DS, IT**	**4/0/0/4**

Nature of Course	: E (Theory based)
Pre requisites	: Fundamental knowledge in applied sciences

Course Objectives:

1	To learn the fundamental, concepts of physics and apply this knowledge to both scientific and engineering problems.
2	To make the students enrich basic knowledge in various fields such as Electrostatics and magnetism
3	To understand the principle and applications of electrochemistry and Polymer science, and explore the knowledge of various energy sources and storage devices.
4	To understand the concepts of photo-physical and photochemical processes in spectroscopy.

Course Outcomes:
Upon completion of the course, students shall have ability to

C101.1	Understand the principles of electrostatics and problems relating to electric field and electric potential.	[U]
C101.2	Realize the nature of magnets, properties and the magnetic effect of electric current.	[U]
C101.3	Describe the nature of electromagnetic wave and its propagation through different media and interfaces involved in different situations.	[AP]
C101.4	Understand the principle and working of reference electrodes, energy storage devices and polymer products in engineering fields.	[U]
C101.5	Interpret the principle and working of analytical techniques.	[AP]

Course Contents:

Electrostatics: **15 hours**

Charges and their conservation; Coulomb's law - superposition principle. Electric field – electric field due to a point charge, electric field lines; electric dipole, electric field intensity due to a dipole - behaviour of a dipole in a uniform electric field. Electric potential - potential difference - electric potential due to a point charge and dipole - equipotential surfaces – electrical potential energy of a system of two point charges.
Electric flux-Gauss's law and its applications. Electrostatic induction-capacitor and capacitance – dielectrics- electric polarisation – parallel plate capacitor with and without dielectric – applications of capacitor – energy stored in a capacitor - Capacitors in series and in parallel – Van de Graaff generator.

Magnetism: **15 hours**

Definitions of fundamental terms – Magnetic field around a current carrying conductor – Direction of magnetic field and current – Biot-Savart law and its application: Magnetic field due to Line charge – Ampere's law and its application: magnetic field due to a solenoid.

Electromagnetic Induction and Alternating Current:

Electromagnetic induction - Faraday's law - induced emf and current - Lenz's law. Self-induction - Mutual induction - self-inductance of a long solenoid - mutual inductance of two long solenoids. Methods of inducing emf - (i) by changing magnetic induction (ii) by changing area enclosed by the coil and (iii) by changing the orientation of the coil. AC generator -

(Single phase, three phase). Eddy current - applications - transformer - Alternating current - AC circuit with resistance - AC circuit with inductor - AC circuit with capacitor - LCR series circuit - Resonance and Q - factor - power in AC circuits.

Chemistry of Batteries and Polymers: 15 hours

Chemistry of batteries-Introduction-Cells and its types-emf series-Nernst equation and its applications. Reference electrodes-standard hydrogen electrode, saturated calomel electrode, glass electrode-pH-measurement. **Discussion of energy storage-**Lead acid, Nickel cadmium and Lithium-ion batteries-Energy Sources-Fuel cells (H_2-O_2). **Polymers-**Classifications-addition and condensation polymerization-free radical mechanism.

Atomic and molecular Spectroscopy: Beer Lambert's law, principle, instrumentation, and applications of electronic spectroscopy (UV-visible), Vibrational and rotational spectroscopy (IR) and atomic spectrum-Flame emission spectroscopy (FES).

	Total Hours:	**45**

23TA201	**TAMILS AND TECHNOLOGY /** தமிழரும் தொழில்நுட்பமும்	**1/0/0/1**
Nature of Course:	C (Theory Concept)	
Pre requisites:	NIL	

Course Objectives:		
1	To know about weaving, ceramic, design and construction technologies in sangam age.	
2	To know the significance of technologies such as manufacturing, agriculture and irrigation.	
3	To understand the development of Scientific Tamils and Tamil Computing.	

Course Outcomes:

Upon completion of the course, students shall have ability to

C201.1	Describe about the weaving industry in sangam age and ceramic technology.	[U]
C201.2	Observe the design of houses, sculptures and construction of temples.	[U]
C201.3	Relate the various manufacturing materials and stone types in Silappathikaram.	[U]
C201.4	Understand the significance of agriculture and irrigation technology in ancient period.	[U]
C201.5	Explain the growth of scientific Tamil, Tamil computing and digitization of Tamil books.	[U]

Course Contents:

Weaving and Ceramic Technology: Weaving Industry during Sangam Age – Ceramic technology – Black and Red Ware Potteries (BRW) – Graffiti on Potteries. **Design and Construction Technology:** Designing and Structural construction House & Designs in household materials during Sangam Age - Building materials and Hero stones of Sangam age – Details of Stage Constructions in Silappathikaram - Sculptures and Temples of Mamallapuram - Great Temples of Cholas and other worship places - Temples of Nayaka Period - Type study (Madurai Meenakshi Temple) - Thirumalai Nayakar Mahal - Chetti Nadu Houses, Indo - Saracenic architecture at Madras during British Period.

Manufacturing Technology: Art of Ship Building - Metallurgical studies - Iron industry - Iron smelting, steel - Copper and gold - Coins as source of history - Minting of Coins – Beads making-industries Stone beads - Glass beads - Terracotta beads - Shell beads/ bone beats - Archeological evidences - Gem stone types described in Silappathikaram. **Agriculture and Irrigation Technology:** Dam, Tank, ponds, Sluice, Significance of Kumizhi Thoompu of Chola Period, Animal Husbandry - Wells designed for cattle use - Agriculture and Agro Processing - Knowledge of Sea - Fisheries – Pearl - Conche diving - Ancient Knowledge of Ocean - Knowledge Specific Society.

Scientific Tamil & Tamil Computing: Development of Scientific Tamil - Tamil computing – Digitalization of Tamil Books – Development of Tamil Software – Tamil Virtual Academy – Tamil Digital Library – Online Tamil Dictionaries – Sorkuvai Project.

	Total Hours:	**15**

Text-cum-Reference Books:

1	தமிழக வரலாறு – மக்களும் பண்பாடும் – கே. கே. பிள்ளை (வெளியீடு: தமிழ்நாடு பாடநூல் மற்றும் கல்வியியல் பணிகள் கழகம்).

2	கணினித் தமிழ் – முனைவர் இல. சுந்தரம் . (விகடன் பிரசுரம்).
3	கீழடி – வைகை நதிக்கரையில் சங்ககால நகர நாகரிகம் (தொல்லியல் துறை வெளியீடு)
4	பொருநை – ஆற்றங்கரை நாகரிகம். (தொல்லியல் துறை வெளியீடு)
5	Social Life of Tamils (Dr.K.K.Pillay) A joint publication of TNTB & ESC and RMRL – (in print)

23CS201	Data Structures and Algorithms	1/0/4/3

Nature of Course:	F (Theory Programming)
Prerequisites:	Problem Solving using C++

Course Objectives:

1.	To introduce list data structure and its applications.
2.	To impart the importance of stacks and queues in problem solving.
3.	To provide knowledge on Tree and Graph data structures.
4.	To discuss the role of hashing in information storage and retrieval.

Course Outcomes:
Upon completion of the course, students shall have ability to:

C201.1	Implement the basic data structures like array and LinkedList.	[AP]
C201.2	Solve real world problems efficiently by applying stack and queue data structures.	[AP]
C201.3	Enumerate the applications with tree data structures.	[AP]
C201.4	Discuss the importance of hashing techniques in information storage.	[U]
C201.5	Employ graph algorithms for solving real time computing problems and analyze them.	[A]

Course Contents:

Module I Linked List & Stack   **5 Hours**

Linked List: Array vs Linked list - Types of linked list - Singly, Doubly and Circular Linked list - Applications of linked list. **Stack:** Stack Model**,** Array and Linked list implementation of Stack – Applications of Stack - Infix, Prefix and Postfix expressions - infix to postfix conversion - Expression Evaluation- Balancing Parenthesis.

Module II Queue and Trees   **5 Hours**

Queue: Queue Model, Array and Linked list implementation of Queue-Priority Queue - Applications of Queue. **Trees:** Binary Tree - Binary Search Tree - Insertion, Deletion, Traversal - Inorder, Preorder, Postorder, Level order traversal.

Module III Graphs and Hashing   **5 Hours**

Graphs: Weighted and Directed graphs - Adjacency matrix and list implementation - Traversal – Breadth First Search & Depth First Search. **Hashing:** Direct Address Table, Hash function, Collision resolution techniques, Linear Probing, quadratic probing, double hashing.

	Total Hours (Theory):	**15**

Lab Component

S. No.	Lab Exercises
1	Implementation of Singly, Doubly and Circular Linked List.
2	Implementation of Stack using Arrays.
3	Implementation of Stack using Linked List.
4	Implementation of Stack applications
5	Implementation of Queue using Arrays.
6	Implementation of Queue using Linked List.
7	Implementation of Queue applications.

8	Implementation of Hashing techniques	
9	Implementation of Binary Search Tree.	
10	Implementation of Graph Traversal algorithms	
	Total Hours (Lab):	**30 Hours**

23CD201	DATABASE MANAGEMENT SYSTEMS	1/0/4/3
Nature of Course:	D (Theory Application)	
Prerequisites:	Nil	

Course Objectives:

1	To introduce fundamental concepts of Data Base Management Systems and concepts of Relational Data Models.
2	To explain Relational algebra, Relational calculus and Normalization.
3	To implement different relational model constraints and SQL queries.
4	To manage Database using transactions, concurrency, and query optimization.

Course Outcomes:

Upon completion of the course, students shall have ability to:

C201.1	Discuss the basic concepts and various data models used in database design	[U]
C201.2	Illustrate Relational algebra, Relational calculus and Normalization.	[AP]
C201.3	Write SQL commands and Subqueries with Constraints.	[AP]
C201.4	Determine Appropriate transactions, views, cursors and triggers to perform the given task.	[AP]
C201.5	Analyze database storage structures, query processing and recovery system.	[A]

MODULE I INTRODUCTION **5 Hours**

Introduction to DBMS, Characteristics of DBMS, DBMS vs File Systems, need for DBMS, Three Level DBMS Architecture, Data Models – Introduction, Benefits, and Phases, ER Diagrams – Symbols, Components, Relationships, Weak entities, Attributes, Cardinality, Relational Algebra, Domain Relational Calculus, Tuple Relational Calculus, Normalization - 1NF, 2NF, 3NF, BCNF, 4NF

MODULE II CONSTRAINTS AND SQL COMMANDS **5 Hours**

DDL Commands - Create, Drop, Alter, Truncate, Rename, Keys - primary Key, Foreign Key DML Commands - Select, Insert, Update, Delete, Any, All, In, Exists, Non-Exists, Union, Intersection, Subqueries - nested, correlated, Joins- Inner, Outer, and Equi, Functions - SUM, COUNT, AVG, MIN, MAX, Clauses - Group By, Having By, Embedded SQL, Dynamic SQL, Transaction Concepts – Transaction model – ACID Properties – Serializability –Transactions as SQL statements.

MODULE III QUERIES AND TRANSACTIONS **5 Hours**

Creation and Dropping of Views, Creation and Execution of Stored Procedures Cursors and Triggers - Opening, Fetching and Closing, Creation , Insertion, Deletion and Updating Database Applications: Payroll Processing Systems, Railway Reservation Systems, Bank Management System Introduction, Storage media and file structures, B+ Tree Hashing – static and Dynamic, Introduction to Query Processing – Issues in query optimization – Steps in query processing, Concurrency control and transactions, Lock based protocols Recovery System – Failure classification

	Total Hours:	**15**

Lab Experiments:

1**.** Conceptual Database design using E-R DIAGRAM

2. Implementation of SQL commands DDL, DML, DCL and TCL

3. Queries to demonstrate implementation of Integrity Constraints

4. Practice of Inbuilt functions

5. Implementation of Join and Nested Queries AND Set operators

6. Implementation of virtual tables using Views

7. Practice of Procedural extensions (Procedure, Function, Cursors, Triggers)

8. Mini Project (Application Development)

   i) IT Training Group Database

   ii) Blood Donation System

   iii) Salary Management System

   iv) Traffic Light Information System

	Total Hours:	30

23CY201	JAVA PROGRAMMING	1/0/4/3
Nature of Course	F (Theory Programming)	
Pre requisites	-	

Course Objectives:

1	To understand the basic concepts of core java.
2	To employ different types of modifiers and Control statements
3	To implement and interpret Arrays and Strings concepts
4	To implement streams and java console formatting features

Course Outcomes :
Upon completion of the course, students shall have ability to

C201.1	Infer the basic concepts of java programming.	[U]
C201.2	Illustrate the usage of different aspects of Controls statements in real world scenarios.	[AP]
C201.3	Apply Array and strings in real time environment.	[AP]
C201.4	Analyse and Interpret StringBuffer and StringBuilder Classes	[A]
C201.5	Utilize the functionalities of streams and java console class.	[AP]

Course Contents:
MODULE I Introduction to Java   5 hours

Introduction to Java: Java Architecture- JVM, JRE & JDK, Keywords, Features of Java, Console input and output statements, variables and Identifiers, Scope of Variables, Data types, Type Conversion, Comments, Command Line Arguments, Access Modifiers **Operators** - Unary Operator- Arithmetic Operator- Shift Operator - Relational Operator - Bitwise Operator - Logical Operator - Ternary Operator and Assignment Operator. **Decision Statements** - if Statements, if-else Branching, switch Statements.

MODULE II Loops, Array & Strings   5 Hours

Looping Statements : using for loop, using while Loops, Using do Loops. **Jump Statements:** using break and continue, Unlabelled Statements, Labelled Statements. **Arrays:** Declaration, Instantiation and Initialization of Java Array, Types of Array - Single Dimension array, Multi-dimension array **Strings:** String, StringBuilder, and StringBuffer, The String Class, Important Facts About Strings and Memory, Important Methods in the String Class, The StringBuffer and StringBuilder Classes, Important Methods in the StringBuffer and StringBuilder Classes, File Navigation and I/O.

MODULE III   Java I/O   5 Hours

Streams: Types of Streams, The Byte-stream I/O hierarchy, Character Stream Hierarchy, Random Access File class, The java.io.Console Class, Serialization, Dates, Numbers, and Currency, Working with Dates, Numbers, and Currencies, Parsing, Tokenizing, and Formatting, Locating Data via Pattern Matching, Tokenizing.

	Total Hours	**15**

List of Component:

S. No.	Lab Exercises
1	Implementation of simple java program using Command Line Arguments
2	Implementation of simple java programs using decision making statements
3	Implementation of simple java programs using Looping statements
4	Implementation of Simple java programs using Jump statements
5	Implementation of 1D Array
6	Implementation of 2D Array

7	Implementation of String functions
8	Implementation of simple java program using Streams
9	Implementation of simple java program using Date and Number classes
10	Implementation of simple java program using Tokenizing

	Total Hours	**30**

23CD202	**OBJECT ORIENTED ANALYSIS AND DESIGN**	3/0/2/4
Nature of Course:	G (Theory Analytical)	
Prerequisites:	-	

Course Objectives:

1.	To understand the fundamentals of object modelling.
2.	To differentiate Unified Process from other approaches.
3.	To design static and dynamic UML diagrams.
4.	To analyze the use case driven requirements for a particular system.
5.	To improve the design by applying appropriate design patterns.

Course Outcomes:

Upon completion of the course, students shall have ability to:

C202.1	Describe the structure and attributes for designing complex systems.	[U]
C202.2	Choose appropriate classes from the requirements and Determine their responsibilities, behaviors, interrelationships, and internal structures.	[AP]
C202.3	Analyze use case models, domain model and conceptual classes.	[A]
C202.4	Construct static and dynamic UML diagrams.	[AP]
C202.5	Apply design patterns to transform UML based software design to pattern based design.	[AP]

Course Contents:

Module 1 Object Oriented Model   **15 Hours**

Introduction to OOAD - Object Oriented Basics – Unified Process - Classes and Objects: Object and Class Relationships. Building Quality Classes and Objects: Measuring Quality - Choosing Operations. Classification: Importance and Challenges - Incremental and Iterative Classification. Approaches for Identifying Classes and Objects: Classical and Modern - Key Abstractions and Mechanisms. Complexity - Structure and Attributes of Complex Systems - Designing Complex Systems. Application Case study: Inventory Management in Visual Paradigm and Enterprise Architect

Module 2 Use Case Modeling   **15 Hours**

Use Case Modeling: Modeling Requirements - Components – Use Case Identification and Description – Use Case Relationships - Relating Use cases – include - extend - generalization. Class Diagram – Elaboration – Domain Model – Finding conceptual classes and description classes – Associations – Attributes - Domain Modeling using class diagrams - Domain Model Refinement - Finding conceptual class hierarchies – Aggregation and Composition. Application Case study: E- Commerce Application in Lucid Chart and Astah

Module 3 UML diagrams and Design Patterns   **15 Hours**

UML Diagrams: UML Views - Classification of UML Diagrams - Extended UML – Interaction Diagram - System Sequence Diagram – Collaboration Diagram - Communication Diagram - State machine diagram and Modeling - Activity Diagram - Timing Diagram - Object Diagram-Implementation Diagram – Package Diagram - Composite Structure Diagram – Component Diagram - Deployment Diagram. GRASP: Designing objects with responsibilities – Design Patterns – Applying Gang of Four design patterns – Mapping design to code. Application Case Study: Next Gen Point of Sale(POS) system, Monopoly game system, Implementation of ChatBot System.

	Total Hours:	**45 Hours**

	Laboratory Component:
1.	Develop a new software system to streamline the process of managing tasks and projects within the organization and to identify the software system's requirements and document the Software Requirement Specification (SRS) for the Identified system.
2.	Create a reservation and booking system for various clients and draw class diagrams to identify the key concepts and their relationships.
3.	Develop a new inventory management system to streamline the operation to identify the use cases and create a comprehensive Use Case model for the proposed system.
4.	Design a new online marketplace platform and identify the conceptual classes of the platform and create a comprehensive Domain Model with Class Diagrams.
5.	Build an online banking application and identify the interactions between objects and represent these interactions in specific scenario using UML Sequence and Collaboration Diagrams.
6.	Design an e-commerce website that allows users to browse products, add products and complete purchase process. As part of the design phase, create Activity and State Diagrams to visually represent the flow of actions and states within the application.
7.	Develop a comprehensive customer relationship management (CRM) system for a medium-sized business. The system should include a user interface for employees, various domain objects representing customer data, and technical services for data processing and create a UML Package Diagram that visually represents the organization of these components.
8.	Create a UML Component Diagram that illustrates the integration of reused and new components within the Learning Management System (LMS) to design new online learning management system (LMS) for a university.
9.	Develop application that includes web front-end, a backend server, a database, and external services for payment processing, email notifications and draw deployment diagrams to model the runtime architecture of the application.
10.	Apply appropriate design patterns to enhance the system's reusability and maintainability of the software system to Improve the modularity and reusability in the system.

	Total Hours:	**30 Hours**

23AS102	APPLIED SCIENCE LABORATORY (Common to B.E. CSD, CSE, CSE (CYBER SECURITY), ECE, EEE, MCT & B.Tech. AI&DS, IT	L/T/P/C
		0/0/4/2

Nature of Course	: E (Skill based)
Pre requisites	: Basic Applied Science laboratory skills

Course Objectives:

1.	To carry out experiments to understand the basic laws of magnetism.
2.	To Understand of how objects become electrically charged and how electrical charge is transferred from one object to another.
3.	To understand the principles and applications of electrochemistry and learning electro-analytical methods, and explore the knowledge of various energy sources and storage devices.
4.	To understand the concepts of photo-physical and photochemical processes in spectroscopy.

Course Outcomes:

Upon completion of the course, students shall have ability to

C102.1	To determine the magnetic field around a current carrying conductor	[E]
C102.2	To determine the rate of growth or decay in a resistor -capacitor circuit and to estimate the resonant frequency and Q-factor.	[E]
C102.3	To determine the relationship between the magnetic flux density and the magnetizing field strength and to find the specific resistance of the wire.	[E]
C102.4	To determine the pH, single electrode potential using reference electrodes and Electroplating process based on electrolytic cell.	[E]
C102.5	Interpret the principle and working of Spectroscopic technique.	[E]

Lab Components:

1	Determination of Magnetic field along the axis of current carrying coil-Stewart and Gee method.	[E]
2	Determination of characteristics of RC circuit to find the time constant.	[E]
3	Determination of characteristics of LCR circuits.	[E]
4	Determination of Hysteresis loss.	[E]
5	Determine the Specific resistance- Carey fosters bridge	[E]
6	Determination of strength of strong acid by pH metry.	[E]
7	Estimation of dissolved oxygen in waste water using Winkler's method.	[E]
8	Determination of single electrode potential of Zinc and Copper by Potentiometric method.	[E]
9	Determination of cathode efficiency of Nickel using electroplating process.	[E]
10	Spectrophotometry-Estimation of iron in sample water.	[E]
	Total Hours:	**30**

23MC102	**ENVIRONMENTAL SCIENCES**	2/0/0/0
Nature of Course	: C (Theory Concept)	
Pre requisites	: Basics in Environmental Studies	

Course Objectives:	
1	To learn the integrated themes on various natural resources.
2	To gain knowledge on the type of pollution and its control methods.
3	To have an awareness about the current environmental issues and the social problems.

Course Outcomes:	
Upon completion of the course, students shall have ability to	
C102.1	Recall and play an important role in transferring a healthy environment for future generation.
C102.2	Illustrate the importance of natural resources and conservation of biodiversity.
C102.3	Interpret and analyze the impact of engineering solutions in a global and societal context.
C102.4	Apply the gained knowledge to overcome pollution problems.
C102.5	Apply the gained knowledge in various environmental issues and sustainable development.

Course Contents:

Natural Resources:

Introduction-Forest resources: Use and abuse, case study-Major activities in forest-Water resources-over utilization of water, dams-benefits and problems. Mineral resources-Use and exploitation, environmental effects of mining- case study–Food resources- World food problems, case study. Energy resources -Renewable and non-renewable energy sources Land resources-Soil erosion and desertification – Role of an individual in conservation of natural resources.

Environmental Pollutions:

Definition – causes, effects and control measures of: a. Air pollution-Acid rain - Greenhouse effect-Global warming- Ozone layer depletion – case study- Bhopal gas tragedy. Water pollution c. Soil pollution - Solid waste management-Recycling of plastics-Pyrolysis method- causes, effects and control measures of municipal solid wastes d. Noise pollution. e. Nuclear hazards-case study-Chernobyl nuclear disaster-Role of an individual in prevention of pollution.

Social issues and the Environment:

Sustainable development-water conservation, rain water harvesting, E-Waste Management – Environmental ethics: 12 Principles of green chemistry-Scheme of labelling of environmental friendly products (Eco mark) – Emission standards – ISO 14001 standard.

	Total Hours:	**30**

SEMESTER – III

23MA301	MATHEMATICAL FOUNDATIONS FOR COMPUTER SCIENCE (COMMON TO CSD/CSE/CSE(CS)/IT/AI&DS)	3/1/0/4

Nature of Course	B (100% Analytical)
Pre requisites	-

Course Objectives:

1	To realise that the subject evolves as a generalization of solving a system of linear equations.
2	To simplify the complexity in high-dimensional data using Principal component analysis
3	To Gain practical experience in programming tools for data sciences
4	To apply quantitative modelling and data analysis techniques to the solution of real-world business problems
5	To explore the societal and ethical implications of computational systems.

Course Outcomes(Theory)
Upon completion of the course, students shall have ability to

C301.1	Recall the basic concepts of differentiation in image transformation.	[R]
C301.2	Understand the practical importance of solving differential equations in climate Sciences.	[U]
C301.3	Utilize Matrix decomposition techniques to perform data analysis.	[AP]
C301.4	Utilise Correlation and regression techniques in data science.	[AP]
C301.5	Apply numerical techniques to obtain approximate solutions of ODE and PDE in climate sciences.	[AP]

Course Contents:

Module 1: Linear Transformations **(20 Hours)**

Automatic Differentiation: Univariate functions - Scalar Valued Multivariate functions – Jacobins - Linear Transformations - Matrix – Inverses - Solving equations - Solving equations using the Newton method - Taking Advantage of Structure: Rank of a matrix Eigen Values and Eigenvectors - Principal Component Analysis: Singular-Value Decomposition.

Module 2: Data Science **(20 Hours)**

Data science – Root mean square distance: Mean - Standard deviation – Correlation – Scatter diagram – Regression: Linear Model - Optimization: Simulation – Monte Carlo methods in simulation – Curve fitting : Method of least squares – Method of group averages

Module 3: Differential Equations **(20 Hours)**

Time Stepping: Euler method - Ordinary differential equation and Parameterized Types- Solving ODE and systems of ODEs - Modelling bacterial growth - Advection and diffusion in 2D – Solving inverse problems: Unconstrained optimization - Constrained optimization- Numerical solution of PDE – Elliptic Equation: Liebmann's iteration process - Parabolic Equation: Bender Schmidt's difference Scheme – Hyperbolic Equations.

	Total Hours:	60

23CD301	SOFTWARE PRODUCT DESIGN	3/0/2/4
Nature of Course :	D (Theory Application)	
Pre requisites :	Nil	

Course Objectives:

1	To explore the fundamental concepts of User Interface design.
2	To learn the structures of user design elements.
3	To discuss about design principles involved in development of good user interface.
4	To familiarize the facets of design thinking techniques, sketching and prototypes.
5	To describe research techniques for web and mobile applications

Course Outcomes

Upon completion of the course, students shall have ability to

C301.1	Understand the fundamentals and importance of User Interface Design.	[U]
C301.2	Interpret user centered design for menu and window navigations.	[U]
C301.3	Illustrate user experience process and design thinking techniques.	[AP]
C301.4	Develop working prototypes based on the user design aspects.	[AP]
C301.5	Apply research techniques for product development and real time applications.	[AP]

Course Contents:
MODULE I: USER INTERFACE   **15 Hours**
Introduction – Characteristics – Principles - Design Process - Screen Users - Interface Design Goals – User Centered Design Technologies - Technological Considerations – User Interface Patterns. Menus: Structures, Functions, Contents, Formatting, Selecting and Navigating, Graphical Menus. Windows: Characteristics, Types, Window Management, Device and Selection Based Control. Visual Designs: Adobe XD, Sketch, Figma. Case Study: User Interface for Big basket application and Social Media Design using Figma

Module II: USER EXPERIENCE   **15 Hours**
Design Process - Elements - Visual Design Principles - Visual Weight - Contrast - Depth and Size – Color. Layout: Page Framework - Footers - Navigation - Images and Headlines. Design Thinking Techniques: Scenarios, Brainstorming, Tools and Techniques for Contextual Enquiry - User Interviews - Competitive Analysis – – Personas – Journey Maps - User Flows - Sketching - Wireframing – Building Low Fidelity and High-Fidelity Wireframe - Prototyping. Case Study: Creating Prototypes for Portfolio Website, Health and Fitness application

Module III: RESEARCH TECHNIQUES   **15 Hours**
Research planning: Research Goals, Format of the plan - Competitive Research: Methods - Focus Groups - Card Sorting - Creating User Profiles - Usability testing - Iterative Product Development - Concept Development - User review and Feedback - Responsive Web Design – Analysis of Websites and Applications. Case Study: Game Design for E-learning, User Experience Design for Financial and Banking Products.

	Total Hours:	**45 Hours**

Laboratory Component:

S. No	List of Experiments
1.	Consider a scenario where a user is purchasing items from an online store, include appropriate checkout process, provide clear calls-to-action, and minimize steps to complete the purchase.
2.	Design an intuitive calendar system, incorporate reminders, and ensure accessibility for a patient who needs to schedule an appointment with a healthcare provider.
3.	Create an easily navigable sharing interface and include privacy settings for a user who wants to share multimedia content on a social media platform.
4.	Consider a User is tracking their daily exercise and nutrition. Design an engaging interface, include gamification elements, and provide easy input for tracking activities and meals.
5.	Assume there are Multiple users collaborating on a document in real-time. Ensure version control, clear indication of changes, and a simple interface that supports real-time collaboration.
6.	Student is navigating an online course with various modules. Include easy navigation, interactive elements, and accessible content, accommodating diverse learning styles.
7.	A user is planning a trip and needs to book flights, accommodation, and activities. Simplify the search and booking process, provide clear information, and offer personalized recommendations.
8.	Assume that a user wants to control various smart devices in their home. Design an interactive control panel, prioritize security, and enable customization for different user preferences.
9.	A candidate is applying for a job online. Streamline the application process, provide status updates, and ensure the system is mobile-friendly.
10.	Consider that a user is managing their personal finances through an app. Design a secure and user-friendly interface for transactions, budgeting, and financial insights, considering the importance of data privacy.

	Total Hours:	**30 Hours**

23AD402	DESIGN AND ANALYSIS OF ALGORITHMS	1/0/4/ 3

Nature of Course:	I (Problem Concepts)
Pre requisites:	Data Structures and Algorithms

Course Objectives:

1	To understand the techniques for analyzing the computer algorithms.
2	To learn the paradigms for designing the algorithms.
3	To analyze the efficiency of various algorithm design techniques / paradigms for the same problem.
4	To understand the graphical algorithms for solving problems.

Course Outcomes:
Upon completion of the course, students shall have ability to

C301.1	Illustrate the searching and sorting algorithms.	[U]
C301.2	Interpret the design principles of greedy and pattern searching algorithms with examples.	[AP]
C301.3	Explore problem-solving methodology used in Backtracking.	[A]
C301.4	Analyse the time and space complexities of dynamic programming strategy in solving complex problems.	[A]
C301.5	Employ range query and graph algorithms in real world problems.	[AP]

Course Contents:

Sorting, Searching and String Algorithms:	**5 Hours**

Time Complexity Analysis – Mathematical Analysis of Recursive and Non Recursive algorithms - Searching & Sorting, Divide and Conquer – Bubble sort, Insertion sort, Selection sort, Binary search, quick sort, merge sort – Heaps & Hashing –Binary heap, heapsort - Greedy Algorithms–Activity selection problem, Fractional knapsack - String algorithms - Naive algorithm, Rabin Karp algorithm, KMP algorithm, Z algorithm, Manacher's algorithm – Huffman coding.

Greedy and Dynamic Programming:	**5 Hours**

Backtracking - Rat in a maze, Permutation and Combination, N Queen problem and Problems on Backtracking, Knight's Tour Problem, Subset Sum, M-Coloring Problem, Hamiltonian Cycle Problem, Sudoku Solver, Sieve of Sundaram, Prime Numbers after P with Sum. Dynamic Programming – Greedy vs Dynamic programming, Top-down and bottom-up approach, Longest Common Subsequence, Longest increasing subsequence, Edit distance, 0-1 Knapsack, Coin change problem, Minimum Cost Path, Subset Sum Problem, Maximum Size Square Sub Matrix with all 1s, Longest Palindromic Subsequence.

Tree and Graph Algorithms:	**5 Hours**

Range query Algorithms - Range Minimum Query (Brute Force Approach). Segment Tree, Range Minimum Query on the Constructed Segment Tree, Range Minimum Query Using Sparse Table. Graph Algorithms –Single source shortest path algorithm, Floyd warshall's Algorithm - Minimum Spanning Tree.

	Total Hours:	**15**

Mapping of Course Outcomes (CO) with Programme Outcomes(PO) and Programme Specific Outcomes(PSO)

Cos	Pos												PSOs

23IT301	WEB TECHNOLOGY USING REACT	1/0/4/3
Nature of Course	F (Theory Programming)	
Prerequisites	Java Programming	

Course Objectives:		
1.	To discuss the essence of front-end development skills.	
2.	To understand and use JavaScript in client-side web applications.	
3.	To impart the knowledge of React components used in web application development.	
4.	To deploy and test the React App used in Web Applications.	

Course Outcomes

Upon completion of the course, students shall have ability to

C301.1	Demonstrate the client-side JavaScript application development with React library.	[U]
C301.2	Construct the single page applications in React.	[AP]
C301.3	Apply the react features including components and forms.	[AP]
C301.4	Analyze the functionality of front-end UI applications using React.	[A]
C301.5	Examine the responsive react applications with CSS	[A]

Course Contents:

Introduction   5 Hours
Fundamentals of React – Requirements, JavaScript Essentials, Event loop, Node.js Fundamentals, Traditional Programming Limitations, React JSX, Overview of frameworks, libraries for client side Web applications, React DOM, Component Instantiation, Environment Setup for React Application, NPM commands, VS Code extensions for ES6, Handler Function-React(formatting and check styles), Hello world app in React, React Essential Features and Syntax, React App Project Directory Structure, Overview of Webpack, Babel, React Component Basic, Create React Component, Understanding JSX, Limitations of JSX, Working with Components and Reusing Components.

React Components and Styles   5 Hours
React Components - Props and State, Understanding and using Props and State, Handling Events with methods, Manipulating the State, Two way data-binding, Functional (Stateless) VS Class (Stateful) Components, Parent – Child Communication, Dynamically rendering contents, Showing Lists, List and keys, Styling Components, CSS Styling, Scoping Styles using Inline Styles, Limitations of inline styles, Inline Styles with Radium, Google Material UI, Installing Material UI, Material UI AppBar, Material UI's Toolbar, Custom React NavBar. CSS - Material UI Buttons, Using Material UI - Rendering a Button, Material UI Card, Material UI Checkbox, Material UI Grid Component, Material UI IconButton, Material UI Paper Component, Style Material UI Components with my own CSS, UI Templates for Business, Typography Usage, Debugging React Apps, Understanding React Error Messages, Handling Logical Errors, Debugging React apps using google developer tools and React DevTool. Understanding Error Boundaries, React Component life cycle, Updating life cycle hooks, Pure Components, React's DOM Updating Strategy, Returning adjacent elements, Fragments, React Component in Details, Higher Order Components, Passing unknown Props, Validating Props, Using References, React Context API, Updated LifeCycle hooks (16.3)

Deploying and Testing Web Applications   5 Hours
React Projects, Demo apps, HTTP Requests/Ajax Calls, HTTP Requests in React, Introduction of Axios package, HTTP GET Request, fetching & transforming data, HTTP POST, DELETE, UPDATE, Handing Errors, Adding/Removing Interceptors, Creating/Using Axios instances, Redux,

React Thunk, Difference between Thunk & other, React hooks, Application Using React & Redux , React Routing, Routing and SPAs, Setting Up the Router Package, react-router vs react-router-dom, Preparing the Project For Routing, Switching Between Pages. Routing-Related Props, The "withRouter" HOC & Route Props, Passing & extracting route/query parameters, Using Switch to Load a Single Route, Navigating Programmatically. React Forms and Form Validation, Creating a Custom Dynamic Input Component, Setting Up a JS Config for the Form, Dynamically Create Inputs based on JS Config, Adding a Dropdown Component. Handling User Input, Handling Form Submission, Adding Custom Form Validation, Fixing a Common Validation, Adding Validation Feedback, Showing Error Messages, Handling Overall Form Validity, Deploying React App to the Web, Testing React apps with Jasmine & implementing JEST.

	Total Hours	**15**

Lab Component:

1.	Create a Stateless Functional Component
2.	Create a Stateful Class Component
3.	Implementation of Conditional Rendering using Class Component
4.	Implementation of Communication (Parent-child) between Components
5.	Create material UI Card using React
6.	Design a Custom Navigation bar using React
7.	Implementation of React component to handle HTTP requests
8.	Implementation of a Dropdown component using React
9.	Implementation of Routing in React
10.	Implementation of FORM validation in React

	Total Hours:	**30**

Text Books:

1.	Robin Wieruch, "The Road to React", 2022 Kindle Edition.

23CS301	ADVANCED JAVA PROGRAMMING	1/0/4/3
Nature of Course	F (Theory Programming)	
Pre requisites	Java Programming	

Course Objectives:

1	To provide insight knowledge of OOP concepts and usage of this, static, super and final keywords.
2	To discuss about different type of Collection Frameworks.
3	To demonstrate threads, JDBC & exception handling with real world examples.
4	To illustrate designing of GUI applications using swing component.

Course Outcomes :
Upon completion of the course, students shall have ability to

C301.1	Illustrate the OOPs concepts like Constructors, Inheritance, Polymorphism and the usage of this, static, super and final keywords.	[AP]
C301.2	Apply the concepts of Exception Handling in real world applications and usage of collection frameworks.	[AP]
C301.3	Develop Multithreaded applications.	[AP]
C301.4	Develop GUI Applications using swing component and to explain the concept of Servlets.	[AP]
C301.5	Develop java application to interact with database by using relevant JDBC Driver.	[AP]

Course Contents:

Module I   Introduction to OOPS   5 Hours
Class and Object, Encapsulation and Abstraction, Inheritance, Polymorphism, Message Passing, Keywords : this, super, static, final, extends and implements. Method Signature and Prototype, Mutator Methods and Accessor Methods, Var-Arg Method, hashCode() and toString() methods. Immutable Objects Vs Mutable Objects, User defined Immutable Class, Constructors : Introduction, Default Constructor, User Defined Constructors, Constructor Overloading, Instance Variable, Instance Methods, Instance Block and Instance Flow Of Execution. Regular Expressions (RegEx).
Inheritance Introduction, Types of Inheritance, Up Casting, Down Casting, IS-A Relationship & HAS-A Relationship, Composition Vs Aggregation, **Polymorphism:** Method Overloading, & Method Overriding.

Module II   Abstraction, Exception Handling & Collections   5 Hours
Abstraction: Abstract Methods and Abstract classes. Interfaces, abstract classes and Interfaces, Concrete Methods Vs Abstract Methods, Differences between classes, abstract classes and Interfaces, Marker Interfaces
Exception - try catch block, Finally Block, Exception Hierarchy, Multiple Exceptions In a Catch Block, Parameterized Try Block, Overriding Methods And Exception. Creating Your Own Exception, The Assert Keyword, The Generics Framework, **Collections:** Set, List, Map & Tree, The Iterator Interface. Working with Hashtable Collection **Threads:** Introduction to Threads, Creating And Starting Threads, Basic Thread Control Methods. Multithreading, Working with Multiple, threads, Thread Life Cycle, Thread Priorities, Synchronizing Methods.

Module III   Swings, Servlets & JDBC   5 Hours
Swings: Introduction, JLabel, JButton, JTextField ,JTextArea, JPasswordField, JCheckbox, JComboBox, JRadioButton, JScrollBar, JMenuItem and JMenu.
JDBC: Drivers, CURD operations, Database connectivity
Servlets : Overview of Servlets , Servlet Life Cycle, Servlet Request and Response , web.xml and its need, Servlet Configuration, Session Tracking

	Total Hours	**15 Hours**

List of Experiments
1. Implementation of default and parameterized constructors.
2. Implementation of method overloading and overriding.
3. Implementation of Inheritance.
4. Implementation of Abstract and Interface concepts.
5. Programs using collection Interface.
6. Implementation of multithreading Concepts.
7. Program to handle multiple exception using try, catch and finally block.
8. Implementation of swing components.
9. Implement Simple application using servlets.
10. Implement CURD operation using JDBC.

	Total Hours	**30 Hours**

23CY202	**OPERATING SYSTEMS**	3/0/2/4
Nature of Course:	F (Theory Programming)	
Pre requisites:	Nil	

Course Objectives:

1	To identify the structure and functions of Operating System.
2	To describe the OS mechanisms to handle processes and threads.
3	To experiment CPU scheduling policies, synchronization techniques and deadlock handling in real time problems.
4	To articulate Memory management schemes.
5	To discuss Device Management, I/O and File systems concepts.

Course Outcomes

Upon completion of the course, students shall have ability to

C202.1	Review the basic concepts and functions of operating systems.	[U]
C202.2	Interpret the processes and threads in operating systems for real world problems.	[U]
C202.3	Examine CPU scheduling algorithms, process synchronization mechanisms and deadlock handling methods.	[AP]
C202.4	Practice memory management techniques including virtual memory and page replacement algorithms.	[AP]
C202.5	Illustrate the concepts related to mass storage, I/O and file system.	[AP]

Course Contents:

Module I Introduction   **15 Hours**
Defining Operating Systems - User view - System view - Computer-System organization - Computer System Architecture - Operating System Operations - Resource Management - Virtualization - Computing Environments - OS Services - System Calls - Overview of Operating System Specific applications - OS Structures - System Boot. Process: Concept - Scheduling – Operations. Thread: Overview - Multicore Programming - Multithreading Models.

Module II Process & Memory Management   **15 Hours**
CPU Scheduling - Process Synchronization: Synchronization Tools - Classic Problems of Synchronization – Deadlocks: System Model- Deadlock in Multithreaded Applications - Deadlock Characterization - Methods for Handling Deadlocks - Prevention - Avoidance -Detection – Recovery. Main memory: Background - Contiguous Memory Allocation – Paging - Structure of the Page Table – Swapping. Virtual memory - Background - Demand Paging - Copy-on-Write - Page Replacement - Allocation of Frames - Thrashing - Memory Compression.

Module III File Management, I/O and storage   **15 Hours**
File-System Interface: File concept - Access methods-Directory Structure - Protection. File System Implementation: File System Structure- Directory implementation- Allocation Methods- Free Space Management. File system Internals: File Systems - File System mounting - Partitions and Mounting - File Sharing. I/O Systems: Overview - I/O Hardware. Mass Storage Structure: Overview - HDD Scheduling - NVM Scheduling - Storage Device Management - Storage Attachment. Case Study: NAND flash storage system, IPC in windows.

	Total Hours:	**45**

Laboratory Component:

S. No	List of Experiments
1.	Study of Basic Linux Commands, proc file system of linux, disk I/O, buffer caches, disk monitoring tool
2.	Implementation of Shell Programming

3.	Implementation of Unix System Calls
4.	Implementation of Non Pre emptive and Pre emptive CPU Scheduling Algorithms
5.	Implementation of Dining Philosopher's Problem to demonstrate Process Synchronization
6.	Implementation of Banker's Algorithm for Deadlock Avoidance
7.	Implementation of Memory Allocation and Management Techniques
8.	Implementation of Page Replacement Techniques
9.	Implementation of File organization Techniques and study on modern file systems like ZFS, btrfs, ext4 etc.
10.	Implementation of Disk Scheduling Algorithms. Compare CPU and Disk Scheduling algorithms in terms of the number of voluntary and involuntary context switches.
	Total Hours: 30

Text Books:

1.	Abraham Silberschatz, Peter B. Galvin, Greg Gagne, "Operating System Concepts" 10th Edition, John Wiley, 2018

SEMESTER – IV

23GE301	UNIVERSAL HUMAN VALUES (Common to all branches)	3/0/0/3

Nature of Course	Descriptive
Pre-Requisites	Interpersonal Communication and Value Sciences

Course Objectives:

1	Development of a holistic perspective based on self-exploration about themselves (human being), family, society and nature/existence.
2	Understanding (or developing clarity) of the harmony in the human being ,family, society and nature/existence.
3	Strengthening of self-reflection.
4	Development of commitment and courage to act.
5	Helping the students to appreciate the essential complementarily between 'VALUES' and' SKILLS' to ensure sustained happiness and prosperity, which are the core aspirations of all human beings.
6	Highlighting plausible implications of such a Holistic understanding in terms of ethical human conduct, trustful and mutually fulfilling human behavior and mutually enriching interaction with Nature.

Course Outcomes:

Upon completion of the course, students shall have ability to

C301.1	Understand and take responsibilities in life and handle problems to attain sustainable solutions while keeping human relationships and human nature in mind.	[U]
C301.2	Apply responsibilities towards their commitments (human values , human relationship and human society).	[AP]
C301.3	Apply what they have learnt to their own self indifferent day-to-day settings in real life, atleast a beginning would be made in this direction.	[AP]
C301.4	Analyze ethical and unethical practices, and formulate strategies to actualize a harmonious environment wherever they work.	[AN]
C301.5	Understand the harmony in nature and existence, and work out mutually on fulfilling participation in nature.	[U]

Course Contents:

Module 1: Course Introduction - Need, Basic Guidelines, Content and Process for Value Education, Understanding Harmony in the Human Being-Harmony in Myself!

15 Hours

Self-evaluation of the students- Pre-test of UHV- Purpose and motivation for the course.Self-Exploration–Its content and process- A look at basic Human Aspirations. Understanding Happiness and Prosperity correctly-Understanding the needs of Self('I') and 'Body'-Understanding the Body as an instrument of 'I'(being the doer, seer and enjoyer)-Understanding the characteristics and activities of 'I' and harmony in 'I' - Understanding theharmony of'I' with the Body- Social activities – Waste Management - Water Conservation-Soil Pollution - Physical Health and related activities - Lectures by eminent persons- Literary activities.

Module 2: Understanding Harmony in the Family and Society- Harmony in Human-Human Relationship, Understanding Harmony in the Nature and Existence- Whole existence as Coexistence 15 Hours

Understanding values in human relationship - Understanding the harmony in the society (society being an extension of family): - Visualizing a universal harmonious order in society-Understanding the harmony in Nature.-Understanding Existence as Coexistence of mutually Interacting units in all-pervasive space. Holistic perception of harmony at all levels of existence-Buddy program-Relationships-Homesickness- Managing peer pressure-Projects-Socially responsible engineers-Visit to local areas (orphanages, special children)- Physicalactivities(games).

Module 3: Implications of the above Holistic Understanding of Harmony on Professional Ethics 15 Hours

Natural acceptance of human values- Definitiveness of Ethical Human Conduct- Basis for Humanistic Education-Humanistic Constitution and Humanistic Universal Order-Competence in professional ethics-Case studies of typical holistic technologies, management models and eco-friendly production systems - Strategy for transition from the present state to Universal Human Order-Sum up: Self-evaluation of the students-Post test of UHV.

	Total Hours:	45

Text Books:

1	Human Values and Professional Ethics by R R Gaur, R Sangal, G P Bagaria, Excel Books, New Delhi, 2010

23CS401	THEORY OF COMPUTATION	3/1/0/4
Nature of Course	J (Problem Analytical)	
Pre requisites	Mathematical Structures	

Course Objectives:

1	To describe various Computing models like Finite Automata, Regular Expression, Grammars, Pushdown Automata, and Turing Machines.
2	To practice formal languages such as Regular languages, Context free languages and Recursive languages and their properties
3	To employ knowledge of pumping lemma in formal language applications

Course Outcomes:

Upon completion of the course, students shall have ability to:

C401.1	Construct a Finite Automata and Regular expression for a Regular language	[AP]
C401.2	Construct a Grammar and Push Down Automata for a Context Free language.	[AP]
C401.3	Apply pumping lemma to Regular Languages and Context Free Languages	[AP]
C401.4	Interpret the properties of Regular, Context Free and recursive Languages	[U]
C401.5	Differentiate decidable and undecidable problems about Turing Machine	[A]

Course Contents:

Module I Finite Automata and Regular Languages   20 Hours

Mathematical preliminaries and notations, Central concepts of automata theory: Finite Automata - Deterministic Finite Automata - Nondeterministic Finite Automata, Equivalence of DFA and NFA, Finite Automata with Epsilon transitions - Applications of FA. Regular Expressions: Finite Automata and Regular Expressions, Applications of Regular Expressions - Regular Grammars. Properties of regular languages: Pumping lemma for regular languages, Closure properties of regular languages, Equivalence and Minimization of Finite Automata.

Case Study on Finite Automata: Online Shopping flow diagram, A Pilot Study on Natural Language Processing.

Module II Context Free Languages   25 Hours

Context Free Grammars (CFG)- Parse Trees - Ambiguity in Grammars and languages, Applications of Context Free Grammars, Pushdown automata (PDA) : Languages of a PDA - Properties of Context Free Languages: Normal Forms (CNF, GNF) for Context Free Grammars - Closure properties of CFL, Membership algorithm for CFG (CYK algorithm)

Module III Turing Machines   15 Hours

Introduction Formal Definition - Design of TM - Computable Functions, Variants of TM, Recursive and Recursively Enumerable languages, Undecidable Problems. Case Study: Explain the concepts Quantum computing and Quantum operations.

	Total Hours:	**60**

23CS402		**ALGORITHMS OF INTERNET**	3/1/0/4
Nature of Course		J (Problem Analytical)	
Pre requisites		Design and Analysis of Algorithm	
Course Objectives:			
1		To learn about the architecture of social networks	
2		To know the models used in social network	
3		To understand the concept of link analysis algorithm and its impact in social networks	
Course Outcomes:			
Upon completion of the course, students shall have ability to:			
C402.1		Discover the structure of the social networks	[U]
C402.2		Apply the web graph methods to build new structure for social networks	[AP]
C402.3		Infer the social network models used gamming and other entertainment	[A]
C402.4		Develop an algorithm to obtain optimized ranking search result in web	[AP]
C402.5		Demonstrate the algorithms used for rank aggregation, voting and community search.	[AP]
Course Contents:			

Module I Structure of social networks   **20 Hours**

Examples of social networks: friendship graphs, scientific collaboration graphs, web graph, Internet (inter/intra domain) graph, Power law degree distribution, small world phenomenon, Clustering coefficient, Structure of the web graph.

Case study: Spread of viruses on social networks

Module II Models for social networks   **20 Hours**

Erdos-Renyi random graphs, Random graphs with a fixed degree distribution, Preferential attachment, Copying models, Models for small-world networks, Network formation games

Case study: Economic aspects of the Internet

Module III Link analysis algorithms   **20 Hours**

Crawling the web, Ranking search results: HITS (Hubs and Authorities), Ranking search results: Page Rank, Computing Page Rank, Web spam, Axiomatic approaches to Page Rank, Rank aggregation and voting theory, finding communities using spectral clustering.

	Total Hours:	**60**

23CS403	COMPUTER NETWORKS	3/0/2/4
Nature of Course	C (Theory Practical)	
Prerequisites	Nil	

Course Objectives:

1.	To study different layers of ISO/OSI reference architecture.
2.	To understand the network topology.
3.	To study the concepts of data link layer and Network layer Protocols
4.	To understand the types of protocols in Transport layer.
5.	To study advanced application layer protocols.

Course Outcomes:
Upon completion of the course, students shall have ability to:

C403.1	Infer the fundamentals of data communications, topologies, layered models, devices, and functions physical layer.	[U]
C403.2	Discover the data link layer functionalities, the flow control, error control mechanisms and LAN standards	[AP]
C403.3	Illustrate the logical addressing schemes, routing protocols and their applications.	[AP]
C403.4	Examine the elements of transport protocols, process-to-process delivery models, congestion control principles and QoS.	[AN]
C403.5	Discover the services of application layer protocols, network attacks, firewalls and emerging networking technologies	[AP]

Course Contents:

MODULE I Data Communication and Physical Layer　　　　　　　　**15 Hours**
Components of data communication - Data Representation – Data flow – Analog and Digital Signals - Categories of Networks – Network Topology - Protocols and Standards - Layers in OSI Model -   TCP / IP protocol suite – Addressing - Performance Metrics. Transmission media – Transmission Impairment. Encoding: NRZ – NRZI –Manchester - 4B/5B. Network Hardware: Repeaters - Hubs – Bridges – Switches - Routers and Gateways. Packet switching vs. circuit switching

MODULE II Data Link and Network Layer　　　　　　　　**15 Hours**
Data Link Layer: Block Coding - Cyclic Codes – Checksum. Stop-and-Wait ARQ - Go-Back-N ARQ - Selective Repeat ARQ. Ethernet – IEEE 802.11 – Bluetooth. Network Layer: IP semantics and syntax - IPv4: Addresses, Datagram. IPv6: Addresses - Advantages, Packet Format – Subnetting. Routing: Distance Vector Routing – Link State Routing. ARP – RARP – DHCP - ICMP. Internet – Voice and video over IP. Computer Networks and the Internet.

MODULE III Transport and Application Layer　　　　　　　　**15 Hours**
Transport Layer: Elements of transport protocols - Process to Process delivery- UDP - TCP - Congestion - Congestion control in TCP. QoS. Marking, Shaping, Policing. Application Layer: Domain Name System – Electronic Mail – FTP – WWW - HTTP - SNMP - DDoS Attacks and Application layer Attacks - Firewalls. Case Study: Software Defined Networking for IoT, Network Troubleshooting with Wireshark.

	Total Hours:	**45**

Lab Component

S. No.	Lab Exercises	
1	Demonstrate the working of network tools such as Ping, TCPDump, Traceroute, Netstat.	

2	Build simple LANs, perform basic configurations for switches using simulator
3	Implement IPv4 and IPv6 addressing schemes and test it with comments
4	Build Connected LANs different subnets with router and Test performance using simulator
5	Performance analysis of TCP and UDP protocol using simulator
6	Performance analysis of routing protocols using simulator
7	Analyze the network traffic using Wireshark tool/Packet tracer tool.
8	Write a program on a datagram socket for the client/server to display the messages on the client side typed at the server-side
9	Simulate a wireless network using cisco packet tracer.
10	Implement email client server in packet tracer

23AD403	**MANAGING CLOUD AND CONTAINERIZATION**	**1/0/4/3**
Nature of Course	F (Theory Programming)	
Pre requisites	Data Base Management Systems	

Course Objectives:

1	To understand the evolution of AWS from the existing technologies.
2	To have knowledge on AWS security and various scaling methods.
3	To team the necessary skills for design, develop and deploy services in creatingwith the help of docker.
4	To implement automated system update and DevOps lifecycle
5	To understand virtualization and provide the perfect security for the entire infrastructure.

Course Outcomes:

Upon completion of the course, students shall have ability to:

C403.1	Demonstrate the basic global infrastructure of the AWS Cloud.	[AP]
C403.2	Identify an appropriate solution using AWS Cloud services for various use cases.	[U]
C403.3	Interpret how the components of Docker containers support compute container implementations.	[AP]
C403.4	Examine common Infrastructure Servers, Availability and Scalability.	[A]
C403.5	Learn why automation, culture, and metrics are essential to a successful DevOps project.	[U]
C403.6	Analyze various cloud models and apply them to solve problems.	[A]

Course Contents:

MODULE I MANAGING CLOUD USING AWS   **5 Hours**

Introduction, Future of AWS, Services - AWS EC2, AWS S3 - Cloud storage, Types, Benefits, AWS IAM - AWS Security, Working of IAM, Components AWS CloudFront Working, Benefits. Introduction, Snapshots vs AMI, Different scaling plans. Introduction, Benefits, Algorithms used for load balancing. **Case study:** E-commerce Website Infrastructure on AWS.

MODULE II CONTAINERIZATION USING DOCKERS   **5 Hours**

Docker, Containers, Usage of containers, Terminology, Docker Run Static sites, Docker Images, Docker File, Docker on AWS, Docker Network, Docker Compose, Development Workflow, AWS EC Services. **Case study:** Microservices Architecture for a Social Media Application using Docker and AWS.

MODULE III DEVOPS   **5 Hours**

Introduction, Test Driven Development, Continuous Integration, Code coverage, Best Practices, Virtual Machines vs Containers, Rolling Deployments, Continuous Deployment, Auto Scaling. **Case Study:** Open Stack, Cloud based ML Solutions in Healthcare. **Case study:** Cloud-Based Machine Learning Solutions in Healthcare.

	Total Hours:	**15**

List of Experiments:	
1	Study of Hosted Hypervisor and Bare Metal Hypervisor.
2	Install a Virtualbox / VMware Workstation with different flavours of linux or windows S
3	Implementation of Virtual Machine(S) and create a Virtual Data center.
4	Configuration of Virtual Internetworking Components.

5	Configure and test Docker bridge networking to enable communication between multiple containers on a single Linux host.
6	Install a docker engine and docker client on windows.
7	Creation and removal of container, container images.
8	Simulate a cloud scenario using CloudSim and run a scheduling algorithm that is not present in CloudSim.
9	Find a procedure to transfer the files from one virtual machine to another virtual machine Using VMWare.
10	Install Google App Engine. Create a hello world app and other simple web applications using python / java.
	Total Hours : 30

23IT402	WEB FRAMEWORKS USING REST API	0/0/4/2
Nature of Course:	L (Programming)	
Pre requisites:	Java Programming	

Course Objectives:

1	To impart the knowledge of REST API and HTTP methods used in Spring Boot Framework.
2	To implement LIKE queries using JPA and handle CRUD operations with JPQL.
3	To develop the various relational mapping with JPA Repository.
4	To deploy Spring Rest controller API.

Course Outcomes:

Upon completion of the course, students shall have ability to

C402.1	Create simple applications with REST API and handle HTTP methods.	[AP]
C402.2	Create a simple Spring Application and inject the literal values by setter injection methods.	[AP]
C402.3	Apply LIKE queries using JPA to Various applications.	[AP]
C402.4	Build application using Spring Boot with JPA repository.	[A]
C402.5	Analyze and create applications with Spring Rest Controller API to perform CRUD operations.	[A]

Laboratory Experiments:

1. Display the information about the current weather in a certain location using RESTful API use a weather forecast provider such as openweathermap.org.
2. Create your own app that embeds the information about flights, hotels and rental cars using Skyscanner API.
3. Create a simple Spring Application and inject the literal values by setter injection. So, create a simple class Employee having three attributes Id, Name, and Designation. Create setter methods for these attributes and a simple method to print the details of the student.
4. Create a simple payroll service that manages the employees of a company. Store employee objects in a database, and access them (via something called JPA).
5. Create a simple payroll service that manages the employees of a company. Perform the following LIKE queries using query methods with the keywords Containing, Contains, IsContaining, StartsWith and EndsWith.
6. Create a simple payroll service that manages the employees of a company. Perform the following LIKE queries using query methods with the keywords NotContains, NotContaining and NotLike.
7. Create a Spring Boot application with Student entity and Student JPA repository. Use Spring Rest Controller API to perform CRUD operations on Student data.
8. Build a simple Rest API application called Donors. This application manages blood donors information and allows its users to Add a new donor, update existing donor information, view existing donors and delete a donor information from the application.

	Total Hours: 60

23ME305	DESIGN THINKING & IDEA LAB	0/0/2/1
Nature of Course	Practical	
Prerequisites	Nil	

Course Objectives:		
1	To Accelerate development of indigenous products to promote "Make in India" campaign	
2	To encourage aspiring Engineers and Researchers to actualize their ideas under one roof.	
3	To Impart multidisciplinary education and research among all stakeholders	
4	To promote experiential learning and entrepreneur skills	

Course Outcomes:

Upon completion of the course, students shall have ability to

C305.1	Describe all the skills associated with the tools and inventory associated with the IDEA Lab.	[R]
C305.2	Associate useful mechanical and electronic fabrication processes.	[U]
C305.3	Apply necessary skills to build useful and standalone system/ project with enclosures.	[Ap]
C305.4	Develop Innovative products which are useful for a student in preparing for an engineering career.	[C]
C305.5	Devise necessary skills to create print and electronic documentation for the system/project.	[E]

Course Contents:

An Insight to Learning : Understanding the Learning Process, Kolb's Learning Styles, Assessing and Interpreting **Remembering Memory :** Understanding the Memory process, Problems in retention, Memory enhancement techniques **Emotions: Experience & Expression** Understanding Emotions: Experience & Expression, Assessing Empathy, Application with Peers **Basics of Design Thinking :**Definition of Design Thinking, Need for Design Thinking, Objective of Design Thinking, Concepts & Brainstorming, Stages of Design Thinking Process (explain with examples) – Empathize, Define, Ideate, Prototype, Test

Being Ingenious & Fixing Problem : Understanding Creative thinking process, Understanding Problem Solving, Testing Creative Problem Solving **Process of Product Design :** Process of Engineering Product Design, Design Thinking Approach, Stages of Product Design, Examples of best product designs and functions, Assignment – Engineering Product Design **Prototyping & Testing :** Rapid Prototype Development process, Testing, **Sample Example**, Test Group Marketing **Celebrating the Difference :** Understanding Individual differences & Uniqueness, Group Discussion and Activities to encourage the understanding, acceptance and appreciation of Individual differences

Design Thinking & Customer Centricity : Practical Examples of Customer Challenges, Use of Design Thinking to Enhance Customer Experience, Parameters of Product experience, Alignment of Customer Expectations with Product Design **Feedback, Re-Design & Re-Create :** Feedback loop, Focus on User Experience, Address "ergonomic challenges, User focused design, rapid prototyping & testing, final product, Final Presentation – **"Solving Practical Engineering Problem through Innovative Product Design & Creative Solution"**

	Total Practical Hours:	**30**

SEMESTER – V

23IT501	CRYPTOGRAPHY AND NETWORK SECURITY	3/1/0/4
Nature of Course:	G (Theory Analytical)	
Pre requisites:	Networking and Communication / Computer Networks	

Course Objectives:

1	To outline the security goals of cryptography
2	To recognize various modern cryptographic techniques and their applications
3	To illustrate public key encryption and hash functions
4	To impart understanding on digital signatures and authentication applications

Course Outcomes:

Upon completion of the course, students shall have ability to

C501.1	Interpret the OSI security architecture and classical encryption techniques.	[AP]
C501.2	Apply the Symmetric and Asymmetric Cryptographic algorithms in real-time examples	[AP]
C501.3	Examine the applications of Cryptographic Hash Functions and Message Authentication Codes	[AP]
C501.4	Develop a model for Digital signature system and authentication system	[AP]
C501.5	Apply techniques to enhance the security in different applications and networks	[AP]

INTRODUCTION   **20**

Concepts of Cyber security– CIA Triad – OSI Security Architecture (attacks, services, mechanisms)- Cryptography - Network Security – Classical Encryption techniques - Symmetric ciphers - Substitution Techniques - Transposition Techniques- Data Encryption Standard – DES example - The Strength of DES - Block Cipher Design Principles -Advanced Encryption Standard, AES Structure-AES Transformation Functions- AES Key Expansion – AES Example- Multiple Encryption and Triple DES

PUBLIC-KEY ENCRYPTION AND HASH FUNCTIONS   **20**

Fermat's and Euler's Theorem - Testing of primality -The Chinese remainder theorem - Public Key Cryptography: RSA- The RSA Algorithm- Diffie-Hellman (ElGamal) - Cryptographic Hash Functions - Applications of Cryptographic Hash Functions -Two Simple Hash Functions - Secure Hash Algorithm (SHA)- SHA 3 - Message Authentication Codes – Requirements – Functions - MACs Based on Hash Functions: HMAC.

NETWORK SECURITY APPLICATIONS   **20**

Digital Signatures: Introduction -ElGamal/Schnorr Digital Signature Scheme
Authentication Applications: Remote User-Authentication Principles - Kerberos - Transport-Level Security: Web Security Considerations - Transport Layer Security – HTTPS - Secure Shell (SSH)- Wireless Network Security: Wireless Security - Mobile Device Security- Network Endpoint Security: Firewalls - Intrusion Detection Systems - Malicious Software - Distributed Denial of Service Attacks
Case Study: Hardening CISCO Devices based on Cryptography and Security Protocols.

23CS501	MOBILE AND EDGE COMPUTING	3/0/0/3

Nature of the Course: D (Theory application)

Pre-requisite(s): Computer Networks

Course Objectives:

1	To provide the students with an understanding of the cellular concept frequency reuse, handoff strategies.
2	To infer the concept of adhoc networks and Wireless Application Protocol in design of wireless networks.
3	To explore the design considerations, scheduling algorithms, task synchronization, communication mechanisms, memory management
4	To gain solid understanding of edge computing and its role in the emerging field of cyber-physical systems.

Course Outcomes:

Upon completion of the course, students shall have ability to

CO1	Summarize the fundamentals of wireless communication and determine the suitable medium access control techniques	U
CO2	Elaborate the concepts and protocol architectures of GSM and satellite systems	AN
CO3	Develop a Adhoc network model using MANET and WAP	AP
CO4	Design edge computing solutions, including architectures, models, and platforms	AP
CO5	Develop knowledge of resource management techniques in edge computing, including task scheduling algorithms, resource allocation algorithms, and load balancing algorithms.	AP

INTRODUCTION TO MOBILE COMPUTING	15

Wireless transmission –Frequencies for radio transmission –Signals –Antennas –Signal Propagation –Multiplexing –Spread spectrum –cellular systems-MAC-Motivation –SDMA –FDMA –TDMA –CDMA, GSM: Mobile services -System architecture -Radio interface -Protocols -Localization and calling –Handover

MOBILE NETWORK AND TRANSPORT LAYER	15

MANET: Characteristics, Classifications, Routing-proactive and reactive. WAP-Architecture, Mobile IP: Goals, assumptions and requirements – Entities and terminologies – IP packet delivery – Agent discovery – Registration – Tunneling and Encapsulation – Dynamic Host Configuration Protocol-Mobile ad-hoc Networks –Improvement on TCP for mobile and wireless network

EDGE COMPUTING	15

Overview of edge computing and its significance in distributed systems. Edge computing architectures, models, and platforms. Comparison of edge computing with cloud computing and fog computing. Resource management in edge computing and its challenges. Resource management techniques for edge computing, including task scheduling algorithms, resource allocation algorithms, and load balancing algorithms.

	TOTAL PERIODS	45

Text Books:

23ITC01	INTERNET OF THINGS	2/0/2/3
Nature of Course	F (Theory Programming)	
Prerequisites	-	

Course Objectives:

1	To understand the concepts of the Internet of Things (IoT) and its design methodologies.
2	To summarize the architecture of the Internet of Things (IoT).
3	To familiarise with the design constraints and challenges of applications.
4	To design basic solutions using embedded platforms for IoT.
5	To assess suitable cloud solutions for IoT systems.

Course Outcomes

Upon completion of the course, students shall have ability to

CO1	Understand the core principles and architecture of IoT systems to enable the development of IoT-based solutions.	[U]
CO2	Interpret design constraints and challenges in developing IoT systems.	[AN]
CO3	Develop cost-effective IoT solutions and interface with embedded platforms like Arduino, Raspberry Pi, or similar boards.	[AP]
CO4	Analyze cloud platforms for deploying, managing, and ensuring the security of IoT solutions.	[AN]
CO5	Apply data analytics to IoT data using Hadoop and MapReduce, demonstrating effective IoT design and implementation.	[AP]

INTRODUCTION TO INTERNET OF THINGS AND IOT DESIGN METHODOLOGIES   **15**

Characteristics of IoT, Physical Design of IoT, IoT Protocols, IoT Reference Architecture, Logical Design of IoT, IoT Levels & Deployment Templates, Domain Specific IoT, IoT Vs M2M Vs IoE, IoT Design Methodologies.

SYSTEM HARDWARE FOR IOT   **5**

Sensors and Actuators – Hardware Kits: Arduino, Node MCU, Raspberry Pi. **Arduino UNO:** Physical Design – Interfaces – Arduino IDE – Arduino Programming with examples: Digital IO – Analog IO – Serial Communication – Condition and Looping statements. **Raspberry Pi**: Physical Design – Interfaces – Pi programming using Python with examples – Python Packages for IoT.

CLOUD AND DATA ANALYTICS FOR IOT   **10**

Cloud: Types of Cloud - IoT with Cloud challenges - Selection of cloud for IoT applications - Fog and Edge computing for IoT - Cloud security aspects for IoT applications. **Data Analytics for IoT:** Overview of Hadoop ecosystem – MapReduce architecture –
MapReduce Job Execution – MapReduce Schedulers.
Case study: Internet of Medical Things (IoMT)

TOTAL (THEORY): 30 PERIODS

List of Experiment
1. Study and Configuration of Arduino kit / Node MCU / Raspberry PI.

2. Basic Programming using Arduino / Raspberry PI:
     a. LED and Switch Interface
     b. Analog & Digital Sensor Interface
     c. Serial Communication
     d. Local display of sensor data using LCD
     e. Display of Sensor values in Mobile handset using Bluetooth

3. Basic Programming using NodeMCU.
     a. Remote control of Electrical appliances using Mobile handset and Wi-Fi
     b. Local Web server using NodeMCU and displaying Sensor values.

4. Design and development of a System using LM35 temperature sensor.
5. Design and development of a System using MQ5 sensor.
6. Design and development of a System using Soil Moisture sensor.
7. Design and development of a System using PIR sensor.
8. Design and development of a System using Heart beat sensor.
TOTAL (Lab) PERIODS: 30
TOTAL PERIODS: 60

23CS502	SOFTWARE TESTING	1/0/4/3
Nature of Course	F (Theory Programming)	
Pre requisites	-	

Course Objectives:		
1	To provide students with an understanding of Core Testing concept.	
2	To learn the functional and non-functional testing.	
3	To understand the different types of User Acceptance testing and end-to-end testing.	
4	To get familiarize with the best practices of Testing.	

Course Outcomes		
Upon completion of the course, students shall have ability to		
C502.1	Plan and apply the appropriate level of testing within the context of a software development application to the satisfaction of its beneficiaries.	[AP]
C502.2	Analyze specific and measurable test cases to ensure coverage and traceability to requirements	[A]
C502.3	Understand the problem of reporting techniques, metrics, and testing status reports and communicate testing results to colleagues, managers, and end users.	[U]
C502.4	Apply testing models, processes and practices appropriate for the software development lifecycle model of a project	[AP]
C502.5	Apply principles and practices of test-driven development to improve testing quality and reduce delivery times	[AP]
C502.6	Inspect the various testing processes towards the continuous delivery of a software product.	[A]

INTRODUCTION TO AUTOMATION TESTING WITH SELENIUM   **5**

What is Software Testing, Why Software Testing, Benefits of Software Testing, Software Test Levels, Unit Testing, Integration Testing, System Testing, Acceptance Testing, Software Test Types, Functional testing, Non-functional testing, Change Related Testing. Test Scenario Design - Functional and non-functional test scenarios, identify and write business critical scenarios. Test Case Design - pre-requisites, test steps and expected results for test cases, Positive and negative testcases for each scenario, Test case prioritization, Test case optimization technique. RTM, DSR. Classes and Objects, Inheritance, and Polymorphism, Exception Handling, Collections, and, Collections (List), JDBC Connectivity, Creating CRUD OPERATION JDBC Connectivity

WORKING WITH SELENIUM   **5**

Selenium webdriver - Maven Configuration, WebDriver Commands, Navigation Command, Selenium locators - Selenium Locators Basics (id, name),Xpath and css locators, Selenium WebElement - Handling of Form Elements, Synchronization Methods, Selenium Exceptions, Keyboard and mouse handling, Alert handling, Iframe Handling in Selenium, Java Script Execution, Handling WebTable and calendar. Introduction to TestNG - TestNg Introduction, Advantage of testNg , testNG Annotations, Test data preparation, Generation of TestNG Reports, Implicit wait and Explicit wait.

TESTING FRAMEWORK   **5**

Testing Frameworks - Data driven testing using Apache POI, POM. Extent Reports - HTML Report

Generation using Extent Reports, Attaching Screenshot in HTML Report.
Log4j - configuring log4j Property files, Log4j - parameters for Properties file, Log levels and logging using log4j, Hybrid framework implementation., Creating the POM with a Hybrid framework folder structure, Implementing the Hybrid framework in POM.

	TOTAL (Theory) PERIODS	15

Lab Component:

1	Develop a program to automate the login process for a specified webpage using Selenium.
2	Write an automation script using Selenium to handle form elements on a given website.
3	Create an automation script with Selenium to interact with specific web elements on a designated webpage.
4	Implement automation scripts using TestNG, prioritizing different test cases for efficient testing on a given website.
5	Develop automation scripts with TestNG, incorporating seven levels of logging for detailed analysis while testing a specified website.
6	Execute application tests using designed test cases and generate an HTML report for a comprehensive overview.
7	Design and implement a hybrid framework for a ticket booking system, along with associated test cases.
8	Develop a hybrid framework and associated test cases for a hotel room booking system.
9	Design and develop a hybrid framework and relevant test cases for a hospital appointment application.
10	Implement a hybrid framework and associated test cases for an e-commerce application.
11	Develop a hybrid framework and design test cases for comprehensive testing of an insurance website.

	TOTAL (Theory) PERIODS	60

23CS503	**APPLICATION DEVELOPMENT**	**0/0/6/3**
Nature of Course	M (Practical Application)	
Prerequisites	-	

Course Objectives:

1	To discuss the essence of front-end development skills
2	To impart the knowledge of React components used in Spring boot development platforms
3	Ability to understand and use Setup Cloud API
4	To deploy and test the React App used in Spring Boot
5	To learn the Spring Cloud concepts using Docker

Course Outcomes

Upon completion of the course, students shall have ability to

CO1	Identify the basic concepts and design issues of React.	[U]
CO2	Understand the principles of process and Spring boot.	[U]
CO3	Illustrate the approaches in scheduling and Spring Cloud to apply in real world problems.	[AP]
CO4	Apply concepts of Micro services Communication to the issues that occur in Real time applications.	[AP]
CO5	Identify issues related to Docker, API Gateway.	[AP]
CO6	Examine common React, Availability and Scalability.	[A]

REACT INTRODUCTION

Components, Routes, State, Props, hooks, Higher Order Functions, Axios and Services, Ant Design. Redux: Core Concept, Data Flow, Store, Actions, Pure function, Reducers, Devtools, Middleware, Webpack, Redux Integration. Spring boot: Annotations, Beans, Configuration, HTTP Methods, Crud, Postman Overview. Spring Security: Authentication, Authorization, Security Implementation. Configure Security, Authentication Manager, HTTP Security, Circular Reference Error. JWT Implementation: JWT Overview, JWT Libraries, Helper Methods, Token Generation and Validation, Implementing JWT Authorization, Filter. OAUTH Implementation: Introduction, Sample flow, Authorization code grant type flow, Implicit grant flow, Password Grant Type flow, Client, Credential Grand type flow, Refresh token Grand type flow, Validating token, Oauth2 integration with Spring Security. Building Micro services: Monolith Architecture and Challenges of Monolith Architecture, What is Micro services & How It Solves the Challenges of Monolith Architecture, Micro services Architecture Benefits and Best Practices, Understanding Spring Cloud and It's Important Modules, Micro service Applications and It's Port Mapping.

MICROSERVISES COMMUNICATION OVERVIEW

Micro services Communication using Rest Template, Micro services Communication using Web Client, Micro services Communication using Spring Cloud Open Feign - Understanding service Registry – Spring Cloud Netflix Eureka Server Implementation, Update on Using Spring Boot 3 Version, Register Micro service as Eureka Client, Update on using Spring Boot 3 Version, Register Micro service as Eureka Client, Running Multiple Instances of Micro service, Load Balancing with Eureka, Open Feign and Spring Cloud Load Balancer API gateway using Spring Cloud gateway: Understanding API Gateway - Create and Set up API Gateway Micro service, Update on Using Spring Boot 3 Version, Register API-Gateway as Eureka Client to Eureka Server, Configuring API Gateway Routes and Test using Postman Client, Using Spring Cloud Gateway to Automatically

Create Rout.

CENTRALIZED CONFIGURATIONS USING SPRING CLOUD CONFIG SERVER

How to Use Spring Cloud Config Server, Create and Setup Spring Cloud Config Server Project in IntelliJ IDEA, Update on Using Spring Boot 3 Version, Register Config-Server as Eureka Client, Set up Git Location for Config Server, Refactor Department-Service to use Config Server, Refactor Employee-Service to use Config Server, Refresh Use case - No Restart Required After Config Changes, REACT Frontend Micro service: Create React App using Create React App Tool, Adding Bootstrap in React Using NPM, Write HTTP Client Code to Connect React App with API-Gateway (REST API Call), Create a React Component and Integrate with API Gateway Microservice, RabbitMQ Core Concepts: RabbitMQ Architecture, Install and Setup RabbitMQ using Docker, Explore RabbitMQ using RabbitMQ Management UI, Create and Setup Spring Boot 3 Project in IntelliJ, Connection Between Spring Boot and RabbitMQ, Configure RabbitMQ in Spring Boot Application, Create RabbitMQ Producer, Create REST API to Send Message, Create RabbitMQ Consumer, Configure RabbitMQ for JSON Message Communication, Create RabbitMQ Producer to Produce JSON Message, Create REST API to Send JSON Object, Create RabbitMQ Consumer to Consume JSON Message, Dockering Spriing boot App : Install Docker Desktop, General Docker Workflow, Create Spring Boot Project and Build Simple REST API, Create Docker file to Build Docker Image, Build Docker Image from Dockerfile, Run Docker Image in a Docker Container, Push Docker Image to Docker Hub, Pulll Docker Image from DockerHub.

COURSE GUIDELINES:

1. Students choose a project topic from a list of approved options or propose their own idea from the area specified in the content and Faculty Coordinator/guide approval required for student-proposed projects

2. Number of students in the project team should be maximum of 4 and Every student shall have a project guide.

3. The entire semester shall be utilized by the students to do their project work by receiving the directions from the project guide.

4. Teams should submit a project proposal, including objectives, scope, timeline, and resources and Faculty Coordinator/guide reviews and approves the proposal.

5. Students should choose projects in line with the Departmental Mission, Vision, and Program Outcomes.

6. Teams should work on their projects, following the approved plan and Regular meetings with faculty advisors for progress updates and guidance.

7. Students should attend periodic reviews to present the progress of the project to faculty and peers' team and Evaluation is based on project outcomes, presentation quality, and teamwork.

8. Teams submit a final project report, including results, conclusions, and recommendations as specified in the guidelines issued by the COE.

9. Students should not be involved in unethical behavior, such as plagiarism, copyright violations, etc while working on projects and when submitting project reports.

10. Every student team will be required to prepare and submit two (2) copies plus (no. of students) copies of the Project report of typical length 30 – 60 pages (excluding Appendices).

11. A final external project viva-voce examination will be conducted to evaluate the student's Individual and team performance based on project outcomes, presentations, reports, and teamwork by an Internal and External Examiners.

SEMESTER – VI

23CSC03	Quantum Computing	3/0/0/3
Nature of the Course: D (Theory Application)		
Pre-requisite(s): -		

Course Objectives:

1	To introduce the core concepts of classical and quantum information and computation.
2	To familiarize students with the fundamental principles of quantum mechanics applied in quantum computing.
3	To explore quantum states, qubit representations, and essential quantum gates.
4	To understand the design and implementation of quantum circuits and operations.
5	To provide introductory knowledge of quantum algorithms and their applications in solving computational problems

Course Outcomes:
Upon completion of the course, students shall have ability to

CO1	Understand the fundamentals of quantum mechanics and represent quantum states	[U]
CO2	Apply quantum postulates to describe and manipulate single and multi-qubit systems.	[AP]
CO3	Construct quantum circuits using quantum gates.	[AP]
CO4	Analyze entanglement and quantum communication protocols, such as superdense coding and teleportation.	[AN]
CO5	Apply basic quantum algorithms, including Deutschs' and Simon's algorithms, to solve computational problems	[AP]
CO6	Apply Quantum Fourier Transform (QFT) in period-finding and explore its role in Shor's factoring algorithm.	[AP]

INTRODUCTION TO QUANTUM MECHANICS 15

History of quantum computation and quantum Information- The Circuit Model of Computation – Review of Complex numbers- Vector spaces- -Linear Algebra and Dirac Notation: Dual vectors - Operators-Inner product -outer product- Quantum postulates-Quantum Measurement-Quantum Bits: single Qubits& multiple qubits Diarc and matrix representation- tensor products - Bloch sphere: Representation of a different basis

QANTUM GATES AND QUANTUM CIRCUITS 15

Classical reversible gates and circuits- Single qubit gates and its operation: Pauli gates, Hadamard gate, Rotational gates – superpositions- Multi qubits gates and its operation: CNOT, CCNOT, Swap and Controlled U Gates. Entanglement- Bell state circuits- Quantum Series and Parallel circuits- super dense coding- Quantum Teleportation

QUANTUM ALGORITHMS 15

Introduction to quantum algorithms- Phase kick back- oracle function- Deutsch's Algorithm - Deutsch-Jozsa Algorithm – Simon's Algorithm – Quantum Fourier transform- period findings using QFT-Grover's search algorithm-Shor's factoring algorithm - Case study: Quantum Cryptanalysis of RSA and Symmetric Encryption Using Shor's and Grover's Algorithms

	TOTAL PERIODS	**45**

Text Books:

1	Lala, P. K. "Quantum Computing: A Beginner's Introduction", McGraw-Hill, 2020.

2	Nielsen, A., Chuang, I. L. "Quantum Computation and Quantum Information", 10th edition, Cambridge University Press, 2010.

23CSC04	PRINCIPLES OF COMPILER DESIGN	3/0/2/4
Nature of Course	H (Theory Technology)	
Prerequisites	-	

Course Objectives:

1	To teach students with the fundamental principles of language translation and compiler design.
2	To train students to apply theoretical concepts in the development of a lexical analyzer and parser.
3	To introduce student wih the various code generation techniques to translate high-level language constructs into efficient machine code.
4	To enable students to explore code optimization strategies and their impact on performance and runtime environments.
5	To equip students with hands-on experience in constructing a functional compiler using LEX and YACC tools.

Course Outcomes:

Upon completion of the course, students shall have ability to:

C202.1	Develop a program to scan source code and identify tokens such as keywords, identifiers, literals, and symbols.	[AP]
C202.2	Implement parsing techniques such as LL(1) and LR parsing to generate parse trees.	[AP]
C202.3	Construct annotated parse trees for language constructs and Implement symbol tables and activation records for scope/access control..	[AP]
C202.4	Design a frontend (analysis phase) and backend (synthesis phase) components of a compiler.	[AP]
C202.5	Compare optimization strategies using empirical profiling and select a method to enhance program efficiency.	[AN]

LEXICAL AND SYNTAX ANALYSIS 15

Phases of a compiler – Lexical Analysis: Role of Lexical Analyzer – Input Buffering – Specification of Tokens – Recognition of Tokens. Finite Automata – Regular expression to Automata – Minimization of DFA.Syntax Analysis: Role of the parser – Context-Free Grammars – Top-Down parsing: Recursive Descent Parsing – Predictive Parsing. Bottom-up parsing: Shift Reduce Parsing – LR Parsers – Error Handling and Recovery in Syntax Analyzer– LEX and YACC tools.

SEMANTIC ANALYSIS AND INTERMEDIATE CODE GENERATION 15

Introduction to Semantic Analysis – Type Checking. Intermediate Code Generation: Intermediate Languages– Declarations – Assignment Statements – Boolean Expressions – Case Statements – Back patching – Procedure Calls.Run Time Environments: Source Language Issues – Storage Organization – Storage Allocation strategies.

CODE GENERATION AND CODE OPTIMIZATION 15

Issues in the design of code generator – The Target Machine - Basic Blocks and Flow Graphs – A simple Code generator. Code Optimization: Principal Sources of Optimization – DAG representation of Basic Blocks – Peephole Optimization– Optimization of Basic Blocks – Introduction to Global Data Flow Analysis.

	TOTAL PERIODS:	**45**

Laboratory Component:
List of Experiment

1. Implementation of lexical analyzer using C and LEX TOOL.
2. Implementation of a calculator that takes an expression (with digits, + and *), computes and print its value, using YACC.
3. Implementation of a parser using LEX and YACC.
4. Implementation of symbol table
5. Implementation of Predictive parsing.
6. Implementation of Shift Reduce Parsing Algorithm.
7. Implementation of LR parsing.
8. Implementation of front end of a compiler that generates the three-address code for a simple language with One data type integer, arithmetic operators, relational operators, variable declaration statement, one conditional construct, one iterative construct and assignment statement.
9. Implementation of back end of the compiler which takes the three-address code as input and produces assembly language instructions that can be assembled and run using an 8086 assembler. The target assembly instructions can be simple move, add, sub, and jump.
10. Implementation of the code optimizer phase of a compiler that eliminates dead code and common sub-expressions

23CSC02	MACHINE LEARNING TECHNIQUES	2/0/2/3
Nature of Course	H (Theory Technology)	
Prerequisites	-	

Course Objectives:

1	To understand the concepts and mathematical foundations of machine learning and types of problems tackled by machine learning
2	To explore the different supervised learning techniques including ensemble methods
3	To learn different aspects of unsupervised learning
4	To learn the role of probabilistic methods for machine learning
5	To understand the basic concepts of neural networks and deep learning

Course Outcomes:

Upon completion of the course, students shall have ability to:

C202.1	Apply mathematical concepts like linear algebra, probability, and vector calculus to solve machine learning problems.	[AP]
C202.2	Evaluate different machine learning problems, including supervised and unsupervised learning, along with their applications and challenges.	[AP]
C202.3	Design supervised learning models and analyze their performance using techniques like cross-validation and ensemble methods.	[AN]
C202.4	Construct probabilistic models, including Naïve Bayes and Hidden Markov Models, for sequence modeling and classification tasks.	[AP]
C202.5	Assess deep learning architectures like CNNs and RNNs and compare them to traditional machine learning techniques	[AN]

INTRODUCTION AND MATHEMATICAL FOUNDATIONS	**10**

What is Machine Learning? Need –History – Definitions – Applications - Advantages, Disadvantages & Challenges -Types of Machine Learning Problems – Mathematical Foundations - Linear Algebra & Analytical Geometry -Probability and Statistics- Bayesian Conditional Probability -Vector Calculus & Optimization - Decision Theory - Information theory

SUPERVISED AND UNSUPERVISED LEARNING	**10**

Introduction-Discriminative and Generative Models -Linear Regression - Least Squares -Under-fitting / Overfitting -Cross-Validation – Lasso Regression- Classification - Logistic Regression- Gradient Linear Models -Support Vector Machines –Kernel Methods -Instance based Methods - K-Nearest Neighbours - Tree based Methods –Decision Trees –ID3 – CART - Ensemble Methods – Random Forest - Evaluation of Classification Algorithms- Introduction - Clustering Algorithms -K – Means – Hierarchical Clustering - Cluster Validity - Dimensionality Reduction –Principal Component Analysis – Recommendation Systems - EM algorithm.

PROBABILISTIC METHODS, NEURAL NETWORKS AND DEEP LEARNING	**10**

Introduction -Naïve Bayes Algorithm -Maximum Likelihood -Maximum Apriori -Bayesian Belief Networks -Probabilistic Modelling of Problems -Inference in Bayesian Belief Networks – Probability Density Estimation - Sequence Models – Markov Models – Hidden Markov Models- Neural Networks – Biological Motivation- Perceptron – Multi-layer Perceptron – Feed Forward Network – Back Propagation-Activation and Loss Functions- Limitations of Machine Learning – Deep Learning– Convolution Neural Networks – Recurrent Neural Networks.

	TOTAL PERIODS:	**30**

List of Experiment
1. Implementation of Regression Models – Linear, Polynomial, Ridge & Lasso Regression on real-world data (House Price Prediction)
2. Decision Tree and Ensemble Learning – Implement Decision Tree, Random Forest, and XGBoost for classification tasks (Iris/Titanic dataset)
3. Support Vector Machines (SVM) and K-Nearest Neighbors (KNN) – Train and evaluate classifiers on Handwritten Digit Recognition (MNIST)
4. Artificial Neural Networks (ANN) – Build a feedforward neural network for classification using Backpropagation (MNIST dataset)
5. Convolutional Neural Networks (CNN) – Train a CNN model for image classification using CIFAR-10/Fashion-MNIST dataset
6. Unsupervised Learning – Implement K-Means, Hierarchical Clustering, and DBSCAN for customer segmentation
7. Dimensionality Reduction & Anomaly Detection – Apply PCA & t-SNE for feature reduction, Autoencoders for fraud detection
8. Model Deployment & Explainable AI – Deploy a trained ML model using Flask/FastAPI and analyze model predictions using SHAP/LIME

23ADC01	ARTIFICIAL INTELLIGENCE AND ITS APPLICATIONS	2/0/2/3

Nature of Course	F (Theory Programming)
Prerequisites	-

Course Objectives:

1	To explore AI's history, definitions, and ethical dimension of AI and differentiate it from Machine Learning and Deep Learning.
2	To study search algorithms, logic-based reasoning, and knowledge representation methods for problem-solving in AI.
3	To gain insights into knowledge representation, logic-based reasoning and expert systems.
4	To implement AI algorithms in domains such as Natural Language Processing (NLP), Computer Vision, and Decision-Making systems.
5	To investigate bias, fairness, accountability, and ethical considerations in designing and implementing AI technologies.

Course Outcomes:

Upon completion of the course, students shall have ability to:

CO1	Assess various Artificial Intelligence (AI) techniques and identify their fundamental concepts.	[U]
CO2	Apply problem-solving techniques such as search algorithms and game theory in AI systems.	[AP]
CO3	Implement knowledge representation and reasoning techniques for intelligent decision-making.	[AP]
CO4	Demonstrate Machine Learning algorithms and AI frameworks to solve real-world problems	[AP]
CO5	Design AI-based applications for NLP, Computer Vision, and Robotics. Evaluate the ethical considerations and social impacts of AI in various domains	[AP]

FOUNDATIONS OF ARTIFICIAL INTELLIGENCE   **10**

Definition and History of AI - AI vs Machine Learning vs Deep Learning - Applications of AI in Healthcare, Finance, and Robotics - AI Ethics and Challenges - Turing Test and AI Approaches (Symbolic AI vs Sub-symbolic AI). PROBLEM SOLVING in AI **-** Problem Formulation - Uninformed Search (BFS, DFS) - Informed Search (A*, Greedy Search) - Constraint Satisfaction Problems (CSPs) - Adversarial Search and Game Theory (Minimax Algorithm, Alpha-Beta Pruning)

KNOWLEDGE, REASONING AND LEARNING   **10**

Logic in AI: Propositional and First-Order Logic - Knowledge Representation: Semantic Networks, Frames, Ontologies - Inference Mechanisms: Forward Chaining, Backward Chaining - Introduction to Expert Systems - Fundamentals of Language -Probabilistic Language Processing -NLP Basics - Reinforcement Learning and AI Agents

AI IN ACTION – PERCEPTION, COMMUNICATION & APPLICATIONS   **10**

Information Retrieval & Extraction – Perception: Image Formation, Object Recognition – AI in Computer Vision (Image Recognition) – AI in Edge Computing and IoT- Case Study - AI Applications in Smart Cities, Healthcare, and Business

	TOTAL (Theory) PERIODS:	30

List of Experiment	
1.	Implement a simple AI-based Python script
2.	Exploring AI applications in real-world case studies.
3.	Implementing BFS and DFS in Python.
4.	Implement A* and Greedy Best-First Search to find the shortest path in a grid.
5.	Implement an AI agent to play Tic-Tac-Toe using the Minimax algorithm.
6.	Implement a basic propositional logic reasoning system.
7.	Build a simple knowledge base using First-Order Logic.
8.	Create a semantic network to represent relationships between objects.
9.	Design a basic expert system for medical diagnosis
10.	Perform tokenization, stemming, and stop-word removal on sample text.
11.	Implement a speech-to-text system using Python's speech recognition library.
12.	Implementing AI for a real-world problem (e.g., predicting student performance).

	TOTAL (Lab) PERIODS: 30
	TOTAL PERIODS: 60

Text Books:

23CS603	Capstone Project	0/0/6/3

Nature of Course	M (Practical Application)
Pre-Requisites	Programming Languages

Course Objectives:

1	To identify a problem area and showcasing a strong understanding of the selected domain.
2	To explore the latest advancements within their selected field of study.
3	To understand and adhere to ethical standards and professional practices in software development.

Course Outcomes:

Upon completion of the course, students shall have ability to

C603.1	Identify a problem and carry out a thorough study on the chosen problem	[AP]
C603.2	Analyze ongoing developments in the chosen domain and demonstrate technical knowledge pertaining to the same.	[A]
C603.3	Apply suitable tools, techniques, Algorithms, frameworks to solve the practical problems.	[AP]
C603.4	Develop a solution for the chosen problem and validate the results.	[C]

Course Guidelines:

Introduction: Identify domain, Framing Problem Statement, Dataset Collection, Analyze the Techniques, Organize the work flow. **Experiments:** Develop software life cycle model, Implement, and provide solution for the chosen problem statement, Validate the result, and provide the documentation for findings.

1. The entire semester shall be utilized by the students to do their Mini project work by receiving the directions from the project guide.
2. Every student shall have a project guide who is the member of the faculty of the institution for the in-house project or an industry mentor from the industry as project guide for an industry/internship project.
3. Identification of project guide has to be completed by the end of previous semester of the project work to be carried out.
4. The duration may be used for library reading, laboratory work, literature survey, computer analysis or field work as assigned by the guide and also to present periodical seminars about the progress made in the project.
5. Number of students in the project team should be maximum of 4.
6. Students can select project topics from the thrust areas.
7. Projects can be Research Based, Application Based, or Multidisciplinary.
8. Students can choose projects in line with the Departmental Mission, Vision and Program Outcomes.
9. Students can identify the project area / title, obtain the consent of faculty to guide them.
10. Students can make use of college subscribed E-resources like IEEE, ScienceDirect and Elsevier to choose base papers and thereby do literature surveys.
11. After project guide allocation, the student team must meet the respective project guide and update about the status of project periodically.
12. While working on the project, every student team must keep a project diary and record all

relevant information. The diary must be verified and signed by the project guide which will be the periodic progress report and submitted during the project review to the project coordinator.

13. Students should not be involved in unethical behaviour, such as plagiarism, copyright violations, etc while working on projects and when submitting project reports.

14. The progress of the project will be evaluated on a continuous basis by conducting periodic internal reviews. The review committee may be constituted by the Head of the Department.

15. A final external project viva-voce examination will be conducted to evaluate the student project work based on oral presentation and the project report by an Internal and External Examiner.

16. Every student team will be required to prepare and submit two (2) copies plus (no. of students) copies of the Project report of typical length 30 – 60 pages (excluding Appendices).

17. The final report shall be in typewritten form as specified in the guidelines issued by the COE.

18. As outcome of the project, students are motivated to publish papers in Scopus Indexed Journals or present the project work in International Conferences.

PROFESSONAL ELECTIVES

Stream I - ML ENGINEERING

23AD902	EXPLORATORY DATA ANALYSIS USING PYTHON	2/0/2/3

Nature of Course	F (Theory Programming)
Prerequisites	-

Course Objectives:

1	To utilize NumPy and Pandas for data manipulation and structuring.
2	To implement querying and transforming data using Data Frame operations.
3	To familiarize learners with descriptive and exploratory visualizations using Python libraries.
4	To teach statistical concepts like central tendency, dispersion, and correlation in the context of EDA.
5	To enable learners to apply best practices of univariate, bivariate, and multivariate analysis using Python and GenAI tools.

Course Outcomes:

Upon completion of the course, students shall have ability to:

C902.1	Apply NumPy and Pandas to organize and manipulate structured data for analysis.	[U]
C902.2	Apply Query and transform Data Frames using filters, aggregations, and CRUD operations.	[AP]
C902.3	Create descriptive and exploratory visualizations using Matplotlib and Python libraries.	[AP]
C902.4	Apply descriptive statistics and explore central tendency, dispersion, and correlation.	[AP]
C902.5	Develop a comprehensive EDA project that demonstrates multivariate analysis, integrates SQL data sources, and uses GenAI tools for insights.	[AP]

DATA STRUCTURING WITH PYTHON LIBRARIES 10

Array Structures - 1D/2D NumPy Arrays, Indexing, Slicing, Broadcasting. Data Structures - Series, DataFrames, Data Types, Null Handling. Data Manipulation - Sort, Drop, Apply, Map, Merge, Join, groupby, concat. Data Types and Conversion – astype(), to_numeric(). Basic Data Cleaning – dropna(), fillna(), replace().

QUERY TRANSFORMATION DATA AND DESCRIPTIVE ANALYSIS 10

Data Filtering - Conditional Filters, Logical Operators, Query Method. Aggregation - Mean, Sum, Count, Min, Max, Custom Aggregations. CRUD Operations - Insert, Update, Replace, Delete rows/columns. SQL Integration – Sqlite3, Connectors, Executing Queries from Python.
Descriptive Analysis - Mean, Median, Mode, Range, Standard Deviation, Variance. Correlation Analysis - Pearson Coefficient, Covariance Matrix. Visualization: Matplotlib Charts, Seaborn Charts, Histograms, Boxplots, Scatterplots, Pairplots.

EDA BEST PRACTICES AND MULTIVARIATE ANALYSIS 10

EDA Techniques - Univariate, Bivariate, Multivariate Analysis. GenAI Tools - AI-generated Summary, Code Assistance, Automated Charts. Project and Summative Assessment - Perform a complete exploratory data analysis using NumPy, Pandas, and Matplotlib. Integrate SQL datasets and use GenAI tools for generating summaries, visuals, and insights.

List of Experiments

1. Create and manipulate 1D and 2D NumPy arrays for basic numeric operations.
2. Construct Pandas Series and Data Frames from lists, dictionaries, and CSV files.

3. Apply filtering and aggregation techniques on Data Frames using groupby and pivot table.
4. Perform insert, update, and delete operations on Data Frames to simulate CRUD logic.
5. Connect Python with a SQLite database and retrieve data into a Data Frame.
6. Calculate mean, median, mode, standard deviation, and correlation on sample datasets.
7. Create visualizations like bar charts, histograms, scatter plots, and box plots using Matplotlib.
8. Perform univariate and bivariate analysis on a dataset using appropriate visuals and stats.
9. Demonstrate multivariate analysis using pair plots or heatmaps on complex datasets.
10. Complete a mini project that uses GenAI tools to generate exploratory insights and visual summaries.

Total Theory	**30 periods**
Total Lab	**30 periods**
Total	**60 periods**

Text Books:

1	"Python for Data Analysis: Data Wrangling with Pandas, NumPy, and IPython" by Wes McKinney, Third Edition, O'Reilly Media, 2022.
2	"Practical Statistics for Data Scientists: 50+ Essential Concepts Using R and Python" by Peter Bruce, Andrew Bruce, and Peter Gedeck, Second Edition, O'Reilly Media, 2020.

23AD905	STATISTICAL METHODS AND BASIC MACHINE LEARNING MODELS	2/0/2/3
Nature of Course	F (Theory Programming)	
Prerequisites	-	

Course Objectives:

1	To develop a foundational understanding of probability theory and sampling methods essential for statistical inference.
2	To apply and interpret hypothesis testing techniques to validate assumptions using real-world datasets.
3	To perform data preparation and preprocessing for effective use in machine learning applications.
4	To explore and analyze regression and classification models for identifying patterns and making predictions.
5	To gain practical experience in implementing clustering algorithms to discover hidden structures in data.

Course Outcomes:

Upon completion of the course, students shall have ability to:

C905.1	Understand and apply probability concepts and sampling techniques for statistical inference.	[AN]
C905.2	Analyse data distributions and perform hypothesis testing using Z-test, T-test, and Chi-Square test	[AN]
C905.3	Prepare and transform data effectively for building machine learning models.	[AP]
C905.4	Apply linear regression techniques to analyse relationships between variables	[C]
C905.5	Implement classification models like logistic regression and K-Nearest Neighbors for predictive analytics and perform clustering using K-Means through a course-end project simulating real-world practices.	[AP]

PROBABILITY, SAMPLING, AND STATISTICAL INFERENCE   **10**

Probability and Prediction- Basic probability- Joint and conditional probability- Real-world probability applications- Sampling and Normal Distributions- Sampling techniques- Sampling distribution- Properties of the normal distribution- Central Limit Theorem- Statistical Inference and Hypothesis Testing(Parametric) - Formulating hypotheses, Z-test and T-test for means, p-value interpretation, confidence intervals. Hypothesis Testing(Nonparametric) - Chi-Square goodness-of-fit test, test for independence in contingency tables.

DATA PREPARATION AND SUPERVISED LEARNING MODELS   **10**

Data Preparation for Machine Learning- Handling missing values- Encoding categorical variables- Data normalization and scaling-Train-test split-Regression Models-Simple linear regression: line of best fit, correlation vs causation, residual analysis -Multiple linear regression: multicollinearity, variable selection, coefficient interpretation, model assumptions- Classification Models- Logistic regression: binary classification, sigmoid function, threshold tuning- Confusion matrix, ROC-AUC.

UNSUPERVISED LEARNING AND MODEL EVALUATION   **10**

K-Nearest Neighbor (KNN) - Distance metrics, choosing k, model training and prediction, performance evaluation. K-Means Clustering - Centroid initialization, distance calculation, elbow method, cluster interpretation and visualization. Model Evaluation -Accuracy, precision, recall, F1-score, cross-validation- Project / Summative Assessment- Implementation of regression,

classification, and clustering models- Use of real-world datasets- Model analysis and reporting.

LIST OF LAB EXPERIMENTS
1. Probability Estimation: Simulate and compute simple, joint, and conditional probabilities using Python.
2. Sampling and Visualization: Apply simple random and stratified sampling on datasets and visualize distributions.
3. Normal Distribution Analysis: Plot and interpret normal distribution with Python and identify z-scores.
4. Hypothesis Testing - Z and T Test: Perform one-sample and two-sample z-test and t-test on numerical data.
5. Chi-Square Test: Conduct Chi-square goodness of fit and independence tests for categorical variables.
6. Data Cleaning and Scaling: Perform handling of missing values, outlier detection, and standardization.
7. Simple Linear Regression: Implement and evaluate a linear regression model using one independent variable.
8. Multiple Linear Regression: Build a model using multiple features and interpret coefficients and R^2.
9. Classification using Logistic Regression and KNN: Train and evaluate logistic regression and KNN models using classification metrics.
10. K-Means Clustering Project: Apply clustering on a real dataset, use elbow method to select k, and interpret results.

Total Theory	**30 periods**
Total Lab	**30 periods**
Total	**60 periods**

Text Books:

1	"Statistics for Data Science and Business Analysis" by Bhushan Patil, BPB Publications, 2020.
2	"Introduction to Machine Learning with Python: A Guide for Data Scientists" by Andreas C. Müller and Sarah Guido, O'Reilly Media, 2016.

23IT901	ADVANCED MACHINE LEARNING TECHNIQUES	2/0/2/3

Nature of Course	D (Theory Application)
Pre requisites	-

Course Objectives:

1.	To equip learners with the knowledge of advanced supervised learning techniques for accurate classification tasks.
2.	To develop the ability to select optimal models using cross-validation and robust performance metrics.
3.	To introduce ensemble learning methods for improved generalization and predictive performance.
4.	To provide hands-on experience in unsupervised learning using hierarchical and density-based clustering methods.
5.	To enable learners to perform dimensionality reduction and explore smart tools like GenAI for automating ML workflows.

Course Outcomes

Upon completion of the course, students shall have ability to

C901.1	Illustrate advanced supervised learning techniques like Naive Bayes, SVM, and Decision Trees for data classification tasks.	[U]
C901.2	Apply unsupervised learning techniques using Hierarchical Clustering and DBSCAN to discover patterns in unlabelled data.	[AP]
C901.3	Identify ensemble learning techniques such as Random Forest, Boosting, and Stacking for improved predictive accuracy.	[AP]
C901.4	Examine dimensionality reduction techniques like PCA and LDA to enhance model performance and interpretability.	[AN]
C901.5	Develop automation of machine learning workflows using Generative AI and smart ML tools for streamlined development.	[AP]

SUPERVISED AND UNSUPERVISED LEARNING TECHNIQUES   10 Hours

Naive Bayes Classification - Probabilistic modelling, prior and likelihood, Gaussian and Multinomial Naive Bayes, real-world applications. Support Vector Machines (SVM) - Hyperplane and margins, kernel tricks, soft vs hard margin, model tuning. Decision Trees for Classification - Tree construction, entropy, Gini index, overfitting and pruning.
Hierarchical Clustering - Dendrograms, agglomerative vs divisive, linkage criteria, cluster interpretation. DBSCAN Clustering - Density-based clustering, core points, epsilon-neighbourhood, handling noise/outliers.

MODEL EVALUATION AND ENSEMBLE LEARNING   10 Hours

Model Validation and Selection - K-Fold, hold-out, stratified K-Fold, LOO cross-validations, model performance comparison. Random Forest & Ensemble Learning - Bagging, feature importance, OOB error, Random Forest classifier. Boosting and Stacking Models - AdaBoost basics, model stacking architecture.

DIMENSIONALITY REDUCTION TECHNIQUES, ML WORKFLOW AUTOMATION AND GENAI TOOLS   10 Hours

Dimensionality Reduction Techniques - PCA for variance preservation, LDA for class separation. ML Workflow Automation - GenAI-powered model recommendation tools, Auto ML pipelines, smart

feature engineering.		
	Total Hours (Theory)	**30**

Laboratory Component:

List of Experiments
1. Naive Bayes Classifier: Apply Gaussian/Multinomial Naive Bayes for text or numeric classification.
2. SVM Implementation: Train and test an SVM model with different kernels (linear, RBF).
3. Decision Tree Classifier: Build a tree-based classifier and visualize decision rules.
4. Hierarchical Clustering: Use dendrograms to visualize clusters and interpret structure.
5. DBSCAN Clustering: Implement density-based clustering and tune epsilon and minPts.
6. Cross-Validation: Perform k-fold cross-validation to compare multiple models.
7. Random Forest Model: Train and evaluate a random forest classifier on a structured dataset.
8. Boosting Techniques: Apply AdaBoost or XGBoost to improve model performance.
9. PCA and LDA: Apply PCA and LDA to reduce dimensions and plot transformed data.
10. AutoML Tools/GenAI Integration: Use GenAI toolkits (e.g., Google Vertex AI, AutoML, or GenAI notebooks) for automated model selection and optimization.

Total Hours (Lab): 30

Total Hours: 60

Text Books:	
1.	Christopher M. Bishop, "Pattern Recognition and Machine Learning", Springer, 2006
2.	Aurélien Géron, 2. "Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow", Third Edition, O'Reilly Media, 2022

23IT902	**NATURAL LANGUAGE PROCESSING**	2/0/2/3

Nature of Course	D (Theory Application)
Pre requisites	-

Course Objectives:

1.	To introduce learners to statistical methods for analysing and interpreting time series data.
2.	To equip students to build and evaluate time series forecasting models using classical methods like AR, MA, ARIMA, SARIMA, and SARIMAX.
3.	To enable learners to integrate Generative AI tools to enhance forecasting accuracy and automate predictions.
4.	To provide knowledge of Natural Language Processing (NLP) techniques to clean, process, and analyze unstructured text data.
5.	To train learners to implement text vectorization, rule-based matching, and various text classification models including fastText.

Course Outcomes

Upon completion of the course, students shall have ability to

C902.1	Interpret statistical characteristics of time series data for effective modeling and forecasting.	[U]
C902.2	Build classical time series models such as AR, MA, ARMA, ARIMA, SARIMA, and SARIMAX.	[AP]
C902.3	Apply preprocessing and cleaning of unstructured textual data using NLP techniques	[AP]
C902.4	Examine rule-based matching, vectorization, and classification for text-based applications.	[AN]
C902.5	Analyse the impact of text classification models including binary, multi-class, and multi-label using fastText and other tools.	[AN]

TIME SERIES FUNDAMENTALS & CLASSICAL FORECASTING MODELS   10 Hours
Time Series Statistics and Exploration - Time-dependent features, trend, seasonality, autocorrelation, stationarity, ACF and PACF. AR and MA Models - Autoregressive and Moving Average models, lag selection, parameter tuning. ARMA and ARIMA Models - Combining AR and MA, differencing for stationarity, model diagnostics, error metrics. Seasonal Models (SARIMA & SARIMAX) - Seasonal components, exogenous variables, parameter selection, forecasting.

UNDERSTAND NLP FUNDAMENTALS AND TEXT PREPROCESSING   10 Hours
Text Processing Fundamentals - Tokenization, stop word removal, stemming, lemmatization, part-of-speech tagging. Text Cleaning and Annotation -Removing noise, entity recognition, labelling strategies. Rule-Based NLP - Pattern matching with spaCy, custom rules, phrase matching, entity ruler.

TEXT CLASSIFICATION MODELS AND USE OF GENAI FOR NLP   10 Hours
Text Vectorization Techniques - Bag-of-Words, TF-IDF, word embeddings, feature selection for modeling. Text Classification – Basics: Binary, multi-class, and multi-label approaches, confusion matrix, evaluation metrics. Advanced Classification with fastText - Text preprocessing, training classifiers, model tuning. GenAI for NLP and Forecasting - Apply GenAI to automate text preprocessing and enhance the extraction of insights from unstructured data.

	Total Hours	**30**

Laboratory Component:

List of Experiments
1.   Time Series Analysis: Plot and interpret components like trend, seasonality, and residuals.
2.   Stationarity Testing: Apply ADF test and visualize rolling statistics.
3.   AR/MA Modeling: Build and evaluate Autoregressive and Moving Average models.
4.   ARIMA/SARIMA Modeling: Apply ARIMA and SARIMA models with proper order selection.
5.   SARIMAX Implementation: Incorporate exogenous variables into SARIMA models.
6.   GenAI for Forecasting: Use Generative AI tools to automate and improve time series predictions.
7.   Text Cleaning and Tokenization: Preprocess raw textual data with annotation and normalization.
8.   Rule-Based Matching: Implement phrase and pattern matching using rule-based NLP techniques.
9.   Vectorization Techniques: Convert text to numerical format using CountVectorizer or TF-IDF.
10.   Text Classification: Build and evaluate binary, multi-class, and multi-label classifiers using fastText, use GenAI for NLP.
Total Hours: 30

Text Books:	
1.	Galit Shmueli, Kenneth C. Lichtendahl Jr, "Practical Time Series Forecasting with R: A Hands-On Guide", 2nd Edition, 2016
2.	Daniel Jurafsky, James H. Martin, "Speech and Language Processing", International Edition, 2008.
References:	
1.	Wes McKinney, "Python for Data Analysis", 2nd Edition, O'Reilly Media, 2017
2.	Steven Bird, Ewan Klein, Edward Loper, "Natural Language Processing with Python", O'Reilly Media, 2009.
3.	Online GenAI documentation (OpenAI, Google Vertex AI) for workflow automation

23IT903	COMPUTER VISION	1/0/4/3
Nature of Course	F (Theory Programming)	
Pre requisites		

Course Objectives:	
1.	To introduce learners to the foundational principles of deep learning and its application to real-world predictive problems.
2.	To build proficiency in developing deep learning architectures using TensorFlow or PyTorch.
3.	To enable learners to apply LSTM and BERT models for textual analysis such as recommendation systems and sentiment classification.
4.	To teach core computer vision techniques including image processing, classification, detection, and segmentation using CNNs.
5.	To encourage the use of Generative AI tools for critique, interpretation, and explainability in deep learning models.

Course Outcomes

Upon completion of the course, students shall have ability to

C903.1	Outline core concepts and architectures of deep learning for predictive modeling using TensorFlow or PyTorch.	[U]
C903.2	Apply LSTM and BERT models for building recommendation engines and performing sentiment analysis on text data.	[AP]
C903.3	Develop computer vision techniques including image processing, classification, and segmentation.	[AP]
C903.4	Utilize Convolutional Neural Networks (CNNs) to classify images and detect patterns in visual data.	[AP]
C903.5	Make use of Generative AI tools to improve model critique, interpretation, and explainability in computer vision tasks.	[AP]

DEEP LEARNING FUNDAMENTALS AND TEXT MODELS   **5 Hours**

Deep Learning Foundations - Neurons, activation functions, forward and backward propagation. Core Building Blocks: Dense layers, dropout, batch normalization, loss functions, optimizers. Predictive Modeling with DL Model definition, training deep networks, evaluation techniques.
Text-Based DL Models - Sentiment analysis using BERT, tokenizer, transformer architecture, fine-tuning. Sequential Models – LSTM - Recurrent layers, building a recommendation system, sequence prediction.

IMAGE PROCESSING & CNNs   **5 Hours**

Image Processing Fundamentals - OpenCV operations, grayscale conversion, edge detection, image transformation. Image Classification with CNN - Filters, feature maps, pooling layers, CNN architecture, model training.

TRANSFER LEARNING & DETECTION   **5 Hours**

Transfer Learning for Images - Pretrained models, feature extraction, fine-tuning. Object Detection Techniques, Bounding boxes, real-time detection basics. Semantic Segmentation - Pixel-wise classification, U-Net architecture, real-time applications. Generative AI Integration - Utilize Generative AI to streamline neural network design and hyperparameter tuning, accelerating the development of deep learning models. DL Tools and Frameworks - TensorFlow/PyTorch, Keras usage; debugging, model saving.

	Total Hours	**15**

Laboratory Component:	
List of Experiments	
1.	Build a basic neural network using TensorFlow or PyTorch to predict numeric output.
2.	Perform sentiment classification using pre-trained BERT on a Twitter dataset.
3.	Build a recommendation engine using LSTM with sequential user-item data.
4.	Load and preprocess images using OpenCV and apply edge detection filters.
5.	Construct and train a CNN from scratch on a dataset like CIFAR-10 or Fashion-MNIST.
6.	Implement transfer learning using a pretrained model like ResNet or VGG16 for image classification.
7.	Detect objects in an image using bounding boxes and a YOLO or SSD approach.
8.	Perform semantic segmentation using U-Net and visualize segmentation maps.
9.	Use Grad-CAM or similar techniques to interpret CNN predictions visually.
10.	Build a GenAI-powered notebook that critiques model performance and explains misclassifications.
11.	Compare image classification accuracy using CNNs vs Transfer Learning techniques.
12.	Present a course-end Project using a full pipeline from problem statement to deployment-ready model.
	Total Hours: 60

23AD906	GENAI ADVANCED PROMPT ENGINEERING & LLMS	1/0/4/3
Nature of Course	M (Practical Application)	
Prerequisites	Basic knowledge of Python programming and fundamentals of prompt engineering.	

Course Objectives:

1	To apply advanced prompt engineering techniques to craft effective prompts and optimize outputs from generative AI models.
2	To programmatically interact with large language models (LLMs) using Java libraries and APIs such as OpenAI and Hugging Face for AI-driven applications.
3	To design and implement API-driven workflows for tasks like content generation, summarization, and text analysis using GenAI services.
4	To address ethical considerations in generative AI, covering areas like bias mitigation, privacy protection, regulatory compliance, and fairness in AI-generated content.
5	To integrate generative AI functionalities into Java-based applications through foundational techniques, enabling the development of practical, AI-enhanced solutions.

Course Outcomes:

Upon completion of the course, students shall have ability to:

C906.1	Analyze advanced prompt engineering techniques to optimize GenAI outputs.	[AN]
C906.2	Implement programmatic interactions with LLMs using Java libraries and APIs (e.g., OpenAI, Hugging Face).	[AP]
C906.3	Design API-driven workflows for specific AI tasks such as content generation, summarization, and text analysis.	[AP]
C906.4	Analyze ethical practices in GenAI, including bias mitigation, privacy safeguards, adherence to regulatory frameworks, and ensuring fairness.	[AN]
C906.5	Apply foundational skills to integrate GenAI into practical applications, preparing for more advanced AI application-building courses.	[AP]

PROMPT ENGINEERING AND LLM INTEGRATION EXPLORING GENAI CAPABILITIES   5

Introduction to Prompt Engineering: Basics of Prompt Engineering, Prompt Structure, Optimization Techniques, Complex Prompts, Common Pitfalls, Troubleshooting. Interacting with LLMs Programmatically: Java Libraries, API Keys, Request Handling, Response Processing, Key Functions, Error Handling, Rate Limits. Exploring GenAI Capabilities: Text Generation, Summarization, Sentiment Analysis, Text Classification, Language Translation, Use Cases, Output Quality.

API WORKFLOWS AND GENAI APPLICATIONS ETHICS, FAIRNESS, AND RESPONSIBLE AI   5

API-Driven Workflows: API Workflows, Workflow Design, Automation Scripts, Workflow Efficiency, Model Integration, Security Considerations. Case Studies and Real-World Applications: GenAI Solutions, Customer Service, Education, Marketing, Domain-Specific Challenges, Effectiveness Evaluation. Ethics and Responsible AI: Biases in AI, Bias Mitigation, Privacy Safeguards, Regulatory Compliance, Fairness, Ethical Frameworks, Accountability Measures.

CAPSTONE PROJECT AND ASSESSMENT   5

Project and Summative Assessment: Project Planning and Design, Solution Development, Testing and Debugging, Review and Refactoring, Project Documentation and Presentation, Summative Course-end Assessment.

TOTAL THEORY : 15 PERIODS

Lab Experiments

1. Design an optimized few-shot prompt that generates creative product descriptions while minimizing hallucinations and ensuring factual accuracy.
2. Develop a Java script that programmatically interacts with an LLM API to generate contextual customer support responses.
3. Create and evaluate different variations of a chain-of-thought prompt for summarizing long-form research papers, ensuring conciseness without losing key insights. Compare the performance with a direct summarization prompt.
4. Implement an interactive chatbot using OpenAI API that refines user-generated prompts. Use the ReAct prompting method to enable reasoning and error correction before responding to the user.
5. Build an API-driven workflow in Java that automates blog content generation and stores the output in a database.
6. Develop an automation pipeline that takes raw user feedback, processes it using sentiment analysis, and categorizes responses for actionable insights. Use chain-of-thought reasoning to improve the classification of nuanced responses.
7. Integrate multiple AI models (e.g., OpenAI + Hugging Face) in a workflow to generate content followed by toxicity detection.
8. Implement a Java-based few-shot language translation tool using an LLM API and evaluate its performance across different dialects.
9. Develop an AI-driven resume screening tool that extracts and classifies key information from job applications.

TOTAL LAB	**60 PERIODS**
TOTAL	**75 PERIODS**

Text Books:

1	"You Look Like a Thing and I Love You" by Janelle Shane (for ethical perspectives).
2	OpenAI, Anthropic, or Cohere documentation for prompt engineering and API usage.
3	"Hands-On GenAI with Python" (online resources / platforms like GitHub & Medium tutorials).

Reference Books:

1	OpenAI Cookbook — https://github.com/openai/openai-cookbook
2	Hugging Face API and Inference Documentation.
3	Ethical AI resources from Google, IBM, and Partnership on AI.
4	Flask and Fast API documentation for real-world web integration.

STREAM II - DATA ANALYSIS WITH ML ESSENTIALS

23AD901	DATA STORYTELLING AND VISUALIZATION	2/0/2/3
Nature of Course	M (Practical Application)	
Prerequisites	-	

Course Objectives:

1	To introduce learners to the fundamentals of data types, Excel functions, and spreadsheet operations.
2	To train learners in data cleaning, transformation, and preparation techniques using Excel tools.
3	To analyze data summarization using PivotTables and apply basic statistical concepts.
4	To understand in creating effective data visualizations to represent patterns, trends, and outliers.
5	To express the ability to craft compelling data narratives using dashboards and visual summaries.

Course Outcomes:

Upon completion of the course, students shall have ability to:

C901.1	Identify data categories and apply essential Excel functions to manipulate data efficiently	[U]
C901.2	Apply cleaning and transformation techniques to prepare datasets for analysis.	[AP]
C901.3	Generate summaries and insights using PivotTables and basic statistical techniques.	[AP]
C901.4	Evaluate meaningful visualizations for descriptive data analysis.	[AP]
C901.5	Design a real-world data storytelling project using dashboards and visual narratives based on industry-oriented practices.	[AP]

EXCEL DATA HANDLING AND FUNCTIONS   10

Data Types and Functions – Data categories, structured vs. unstructured, XLOOKUP(), IF(), SUMIF(), SUMIFS, COUNTIF(), COUNTIFS, AVERAGEIF(), Logical Operators. Data Import and Cleanup – Import from text, remove blanks, trim, find and replace, remove duplicates.

ANALYSIS WITH PIVOTTABLES AND VISUAL TECHNIQUES   10

PivotTables and Charts – Grouping, filtering, calculated fields, PivotCharts, Central Tendency Analysis – Mean, median, mode. Outlier Detection – Visual spotting, IQR, z-score basics - Bar and Column Charts – Categorical comparisons, stacked vs. clustered. Pie and Donut Charts – Composition representation. Histograms and Scatterplots – Distribution analysis, pattern recognition. Trend Lines and Custom Formatting – Forecasting, dynamic visuals.

DATA STORYTELLING, CORRELATION AND ASSESSMENTS   10

Correlation and Spread – Variance, standard deviation, correlation coefficient. Storytelling with Data – Visual hierarchy, narrative building. Dashboard Design – Layout planning, dashboards, slicers, interactivity, interpretation - Apply storytelling techniques to a real-world dataset using Excel to design an interactive dashboard and narrative presentation.

TOTAL THEORY: 30 PERIODS

List of Experiments

1. Classify different data types and apply functions like XLOOKUP, COUNTIF, and IF to perform logical operations for a given business scenario.
2. Import messy data from CSV/TEXT and clean it using trimming, find & replace, and removal of duplicates.
3. Create a PivotTable to summarize sales data by category, region, and time.
4. Generate a PivotChart to compare product performance across quarters.
5. Plot bar and pie charts using cleaned data to depict category-wise sales contribution.
6. Use histogram and scatter plot to analyze data spread and identify correlation.
7. Apply statistical formulas to calculate mean, median, mode, and detect outliers.
8. Design a multi-section Excel dashboard using slicers, conditional formatting, and charts.
9. Narrate a short data story integrating visuals and insights derived from an Excel analysis.
10. Apply data cleaning, pre-processing, visualization and storytelling techniques to a real-world dataset using Excel to design an interactive dashboard.

	TOTAL LAB	**30 PERIODS**
	TOTAL	**60 PERIODS**

Text Books:		
1	"Data Visualization with Excel Dashboards and Reports" — Dick Kusleika.
2	"Storytelling with Data: A Data Visualization Guide for Business Professionals" — Cole Nussbaumer Knaflic.

Reference Books:		
1	Microsoft Excel Online Documentation.
2	Blogs and Tutorials on Excel PivotTables, Charts, and Dashboards.
3	Data storytelling case studies and online courses (LinkedIn Learning, Coursera).

23AD903	PROBLEM SOLVING WITH ANALYTICAL & DESIGN THINKING	2/0/2/3
Nature of Course	F (Theory Programming)	
Prerequisites	Nil	

Course Objectives:

1	To identify and deconstruct real-world problems through root cause analysis and user-centric research.
2	To generate innovative ideas using structured ideation techniques and frame actionable problem statements.
3	To organize, prioritize, and visualize ideas through the creation of rapid prototypes and user flow mockups.
4	To explore solutions with users and refine designs through iterative feedback and continuous improvement.
5	To design and present real-world solutions and plan further improvements through collaborative decision-making.

Course Outcomes:

Upon completion of the course, students shall have ability to:

C903.1	Identify root causes of real-world problems and build user empathy through research tools and techniques.	[AN]
C903.2	Generate multiple creative solutions and translate user needs into actionable problem statements.	[AN]
C903.3	Organize and prioritise ideas using mapping tools and create low-fidelity prototypes.	[AN]
C903.4	Conduct usability testing and refine designs based on structured user feedback and observation.	[AN]
C903.5	Apply analytical and design thinking practices in an end-to-end industry-oriented problem-solving project.	[AP]

PROBLEM DISCOVERY AND RESEARCH **10**

Problem Identification & Understanding – Spot surface-level vs deeper issues – Apply 5 Whys and Fishbone tools – Break down complex challenges – Frame a clear problem statement. Understanding the User's World – Create Empathy Maps – Draft User Journey Maps – Identify pain points and behavior patterns – Use journey maps to define the real problem. Defining the Problem Statement – Synthesise key user insights – Frame a Point of View (POV) – Write focused "How Might We" questions – Align problem with user/business needs.

IDEATION, PROTOTYPING AND VISUALISATION **10**

Generating Potential Solutions – Run Crazy 8s sketch activity – Use SCAMPER technique Build on team ideas – Avoid early filtering or judging. Prioritising & Organising Ideas – Cluster ideas using Affinity Mapping – Build early process flows – Use Impact–Effort matrix – Select one idea to pursue. Translate ideas into quick draft – Sketch step-by-step user flows – Draw simple screen layouts – Build quick paper-based mockups – Walk others through the concept.

TESTING, REFINEMENT AND FINAL PROJECT EXECUTION **10**

Testing with Users – Conduct usability tests – Use Think-Aloud Protocol – Observe and take silent notes – Identify confusion or friction points. Refine designs using user feedback – Identify what to improve from feedback – Prioritise using Impact–Effort mapping – Document decisions in a changelog – Refine prototypes. **Final Project Execution** – Project and Summative Assessment involving real-world problem definition, user research, ideation, prototyping, testing, and final presentation.

TOTAL THEORY: 30 PERIODS

List of Experiments

1. Root Cause Analysis: Use 5 Whys and Fishbone diagram to identify the core of a given problem.
2. Empathy Mapping: Create empathy maps and journey maps based on user interviews or personas.
3. Problem Framing: Write Point of View (POV) statements and corresponding "How Might We" questions.
4. Idea Generation: Conduct a Crazy 8s activity to generate 8 creative solutions in 8 minutes.
5. SCAMPER Exercise: Apply SCAMPER technique to improve an existing product or service.
6. Idea Prioritisation: Use Affinity Mapping and Impact–Effort Matrix to select a feasible solution.
7. Prototyping: Build a low-fidelity paper prototype and prepare a walk-through of the concept.
8. User Testing: Conduct Think-Aloud usability testing with 2–3 users and document observations.
9. Iteration Log: Maintain a changelog to record design decisions and refinements based on feedback.
10. Mini Project: Execute a mini end-to-end design sprint (Empathize → Define → Ideate → Prototype → Test) on a campus or community problem.

	TOTAL LAB	**30 PERIODS**
	TOTAL	**60 PERIODS**

Text Books:

1	Tim Brown, Change by Design: How Design Thinking Transforms Organizations and Inspires Innovation, Harper Business.
2	Jeanne Liedtka, Design Thinking for the Greater Good: Innovation in the Social Sector, Columbia Business School Publishing.

Reference Books:

23AD904	POWER BI	2/0/2/3
Nature of Course	M (Practical Application)	
Prerequisites	-	

Course Objectives:

1	To identify the complete workflow of extracting, cleaning, and transforming data using Power Query.
2	To gain knowledge in preparing structured datasets and designing efficient data models for scalable analytics.
3	To understand the use of DAX expressions for aggregations, measures, and implementing business logic.
4	To be familiar with the process of designing interactive dashboards and applying effective data storytelling techniques.
5	To analyse AI-powered analytics features and the secure publishing and management of Power BI reports for collaboration.

Course Outcomes:

Upon completion of the course, students shall have ability to:

C904.1	Extract, clean, and transform raw datasets using Power Query and ETL features in Power BI.	[AN]
C904.2	Structure data and implement robust data models for performance and scalability.	[AN]
C904.3	Use DAX to build dynamic metrics, perform business calculations, and derive insights.	[AP]
C904.4	Design compelling dashboards with interactive visuals for effective data storytelling.	[C]
C904.5	Apply advanced DAX and AI analytics to generate predictive insights and deliver a course-end project simulating real business reporting.	[AP]

DATA PREPARATION AND TRANSFORMATION 10

Data Extraction and Transformation - Power Query Editor- ETL techniques - connecting to data sources - cleansing and shaping data. Data Preparation and Structuring - Handling missing data - data types - appending and merging queries - data formatting best practices. Data Modeling and Optimization - Creating Relationships - star and snowflakes schema design - calculated columns – role playing dimensions.

MODELING AND DAX CALCULATIONS 10

Model Optimization - Relationship management - model size reduction - use of aggregations - performance tuning. Basic DAX Calculations – Syntax - calculated columns vs measures – aggregations- conditional – logical - time intelligence functions. Advanced DAX - Context transition, CALCULATE -FILTER, scenario-based analysis, KPIs.

REPORTING, VISUALIZATION AND PROJECT EXECUTION 10

Data Visualization and Storytelling – Chart selection - visual formatting – narrative driven dashboards – drill through - bookmarks. Interactive Reports – Slicers – filters – tooltips – buttons - custom visuals - cross-filtering. AI-Powered Analytics - Q&A visuals - Smart Narrative - Decomposition Tree - Key Influencers. Project and Summative Assessment including DAX model building - interactive dashboard creation - AI insights - and secure report sharing.

TOTAL THEORY: 30 PERIODS

LIST OF LAB EXPERIMENTS

1. Data Cleaning in Power Query: Load a messy CSV and perform basic cleaning such as removing nulls, renaming columns, and filtering rows.
2. ETL Workflow: Connect multiple data sources (CSV, Excel), perform merge and append operations in Power Query.
3. Model Creation: Create fact and dimension tables from the dataset and establish relationships for a sales dashboard.
4. Calculated Columns and Measures: Use DAX to create calculated columns (e.g., Profit = Sales - Cost) and dynamic measures (e.g., Year-over-Year Growth).
5. Time Intelligence: Create Month-to-Date and Year-to-Date measures using DAX time intelligence functions.
6. Dashboard Design: Develop a sales performance dashboard using line charts, KPI cards, slicers, and bar charts.
7. Drill-through and Bookmarks: Add page navigation and drill-through capabilities to a dashboard with customized tooltips.
8. AI Insights Integration: Use decomposition tree and key influencers visuals for AI-assisted insights.
9. Secure Report Publishing: Publish a report to Power BI Service, set access controls, and schedule data refresh.
10. Mini Capstone Project: Execute a complete reporting cycle including data cleaning, modelling, DAX, visualization, and secure publishing for a retail business use case.

	TOTAL LAB	**30 PERIODS**
	TOTAL	**60 PERIODS**

STREAM III - CLOUD IT ADMINISTRATION

23CS901	**IMPLEMENTING AND ADMINISTERING ENTERPRISE NETWORKS**	**2/0/2/3**

Nature of Course	D (Theory Application)
Prerequisites	-

Course Objectives:

1	To introduce the fundamentals of network design using OSI and TCP/IP models for various networking scenarios.
2	To develop logical networking skills for small to large-scale networks including LAN, MAN, and WAN environments.
3	To train learners to configure routers and switches using Cisco's Internetworking Operating System (IOS).
4	To equip students with skills in network traffic monitoring, analysis, and troubleshooting using industry-grade tools.
5	To familiarize learners with the use of GenAI tools in detecting network anomalies and strengthening network security.

Course Outcomes:

Upon completion of the course, students shall have ability to:

C901.1	Analyse communication protocols using OSI and TCP/IP models and apply them to design efficient networks.	AN
C901.2	Design and implement logical networks for LAN, MAN, and WAN using simulation and configuration tools.	AP
C901.3	Configure routers and switches using Cisco IOS to establish and secure reliable network connectivity.	AP
C901.4	Troubleshoot and optimize network performance using techniques like subnetting, partitioning, and IP planning.	AN
C901.5	Build an end-to-end network project integrating GenAI-based anomaly detection with tools like Wireshark and SNMP, adhering to industry practices.	AP

NETWORK FOUNDATIONS AND LOGICAL NETWORK DESIGN   **10**

OSI and TCP/IP models, data encapsulation and de-encapsulation, Ethernet standards, types of cables and connectors, network interface devices, switching basics, collision and broadcast domains, LAN, MAN, WAN architectures, IP addressing and subnetting, VLSM and CIDR, network partitioning, logical topology planning, VLAN creation and configuration, trunking and inter-VLAN routing.

ROUTING AND SWITCHING   **10**

Router and switch boot process, Cisco IOS command-line interface, static routing, RIP and OSPF configuration, routing table management, switch configuration, MAC address tables, port security settings,

NETWORK ANALYSIS & ANOMALY DETECTION   **10**

Traffic sniffing using Wireshark, protocol and packet analysis, identifying latency and packet loss, SNMP-based monitoring with Zabbix, event correlation, GenAI-based anomaly detection, alert generation and reporting. End-to-end network design and simulation, router and switch configuration, traffic monitoring using Wireshark, integration of GenAI tools for anomaly detection, documentation and reporting of findings.

                                                     TOTAL THEORY: 30 PERIODS

LIST OF LAB EXPERIMENTS

1. Simulate OSI layer communication using Packet Tracer and analyze encapsulation and de-encapsulation at each layer.
2. Design a LAN topology in GNS3 and assign static IPs to configure connectivity among nodes.
3. Perform subnetting and configure appropriate addressing schemes for segmented networks.
4. Create and configure VLANs and enable inter-VLAN routing in a switch-based topology.
5. Configure and verify static routing and RIP protocol on multiple routers.
6. Use Wireshark to capture live packets, filter protocols like ICMP, HTTP, DNS, and analyze headers.
7. Diagnose network issues using tools like ping, traceroute, and show commands in Cisco IOS.
8. Monitor network performance using Zabbix with SNMP configurations to track CPU, memory, and interface traffic.
9. Detect and classify network anomalies using GenAI prompts applied to Wireshark data logs.
10. Complete an integrated project to design, configure, monitor, and report on a secure and efficient network using simulation and GenAI tools.

23CS902	LINUX SYSTEM ADMINISTRATION	20/2/3
Nature of Course	D (Theory Application)	

Pre-requisite(s): -

Course Objectives:

1	To introduce learners to Linux system architecture, essential commands, and shell environment.
2	To equip students with skills to install Linux distributions, manage partitions, and configure file systems.
3	To enable management of users, groups, permissions, services, and disk operations.
4	To teach automation of administrative tasks using Bash scripting and GenAI tools.
5	To train learners to configure network services, implement security hardening, and centralized monitoring in a Linux environment.

Course Outcomes:

Upon completion of the course, students shall have ability to

C902.1	Install and configure Linux systems with manual disk partitioning and filesystem setup.	AP
C902.2	Manage users, groups, files, permissions, and services for secure system operations.	AN
C902.3	Troubleshoot Linux services and processes to maintain availability and performance.	AN
C902.4	Automate administrative tasks using Bash scripting and integrate GenAI tools effectively.	AN
C902.5	Complete a capstone project applying Linux administration concepts and industry practices in a simulated environment.	AN

LINUX INSTALLATION AND USER MANAGEMENT 10

Linux installation using ISO files, manual disk partitioning, Linux boot process, file system structure and types, working with mount and unmount commands, terminal usage and basic Linux commands, package management in Debian and RedHat systems, User and group management, setting file and directory permissions using chmod and chown, managing access control lists (ACL), disk partitioning using fdisk and parted, managing Linux processes and services, service status monitoring using systemctl and journalctl.

AUTOMATION AND SHELL SCRIPTING 10

Writing and debugging Bash scripts, automating routine tasks with cron and at, managing process priorities using nice and renice, multitasking in shell, system update and upgrade operations, using GenAI tools to generate Linux administrative scripts,

NETWORKING AND MONITORING SERVICES 10

Configuring network interfaces and services, using nmtui and Network Manager, implementing DHCP and DNS services, enabling remote access with SSH and RDP, centralized logging with rsyslog and syslog-ng, log management using logrotate, SNMP-based monitoring using

Zabbix.Capstone project integrating Linux installation, configuration, service management, scripting, and monitoring tasks, demonstrating real-world system administration and automation practices using VirtualBox, GenAI, and remote tools.	
TOTAL PERIODS:	**30**

Lab Component:	
1	Install Ubuntu or CentOS with manual partitioning using VirtualBox.
2	Create, modify, and delete users and groups, and enforce password aging policies.
3	Configure and test file and directory permissions using chmod, chown, and ACL.
4	Partition disks and create file systems using fdisk, mkfs, and mount them manually.
5	Monitor and restart services using systemctl and diagnose logs using journalctl.
6	Write a Bash script to automate the creation of users and configuration of a firewall.
7	Schedule automated backup tasks using cron and implement basic recovery with rsync.
8	Configure static IPs, test DHCP and DNS settings, and access systems remotely via SSH.
9	Implement centralized logging using rsyslog and rotate logs with logrotate.
10	Generate and validate Linux admin scripts using GenAI for real-time task automation.

23CS903	INFORMATION SECURITY SYSTEMS	2/0/2/3
Nature of Course	D (Theory Application)	
Prerequisites	-	

Course Objectives:

1	To introduce learners to the foundational principles and core objectives of information security, including the CIA triad, asset protection, and risk assessment methodologies.
2	To train students to implement secure authentication and enforce access control mechanisms in enterprise systems.
3	To equip learners with knowledge and tools to build secure network perimeters using firewalls, IDS/IPS systems, and encrypted communication protocols.
4	To enable students to understand and apply cryptographic techniques for secure data exchange and identity verification.
5	To leverage GenAI tools to enhance threat detection, malware analysis, and develop real-world security responses.

Course Outcomes:

Upon completion of the course, students shall have ability to:

C903.1	Explain the CIA triad, conduct risk assessments, and align security implementations with industry standards.	U
C903.2	Design and enforce authentication policies using passwords, hashing techniques, and multi-factor authentication.	AP
C903.3	Configure and manage network security defences such as firewalls, IDS/IPS, and VPNs to prevent external threats.	AN
C903.4	Apply symmetric and asymmetric cryptography, generate keys, and secure data using encryption, digital signatures, and PKI.	AP
C903.5	Use GenAI and open-source tools to analyse and mitigate malware threats and implement security controls in practical scenarios.	AP

FUNDAMENTALS OF INFORMATION SECURITY 10

CIA triad concepts, assets and vulnerabilities, threats and attacks, security goals and objectives, risk analysis methods, information security frameworks and compliance standards (ISO 27001, NIST), security governance and security policiesm,Password policy enforcement, hashing and salting, multi-factor authentication methods, access control models (MAC, DAC, RBAC), implementation of IAM (Identity and Access Management), directory services, SSO integration.

NETWORK PERIMETER PROTECTION 10

Firewall types and configuration (stateful, stateless), VPN setup and tunneling protocols, IDS/IPS concepts and implementation (Snort, Suricata), secure network protocol usage (SSH, HTTPS, SFTP), transport layer security, port scanning and hardening,

CRYPTOGRAPHY AND DATA SECURITY 10

Symmetric and asymmetric encryption techniques (AES, RSA), hashing algorithms (SHA, MD5), Kerberos, LDAP, digital signature generation and verification, public key infrastructure (PKI), usage of OpenSSL for encryption and signing, certificate generation and validation.

Capstone project on secure system design including cryptographic implementation, firewall and VPN setup, malware traffic detection using GenAI-based tools. Summative evaluation through documentation, testing, and practical defense strategy presentation.

TOTAL THEORY: 30 PERIODS

LIST OF LAB EXPERIMENTS

1. Analyse and document security gaps in a given system using the CIA triad model.
2. Implement password hashing using SHA256 and validate salted hash results.
3. Set up multi-factor authentication using tools like Google Authenticator or DUO.
4. Simulate RBAC (Role-Based Access Control) in a Linux or web application environment.
5. Configure iptables or pfSense to create firewall rules and log denied packets.
6. Capture and analyse potentially malicious traffic using Wireshark filters.
7. Encrypt and decrypt sensitive files using OpenSSL command-line utilities.
8. Create and use public/private key pairs for signing and verification tasks.
9. Use a GenAI-based tool to simulate malware detection and analyse log patterns.
10. Final integrated project to demonstrate understanding of access control, cryptographic security, and perimeter defence mechanisms.

23CS904	LOW-CODE NO-CODE APPLICATION BUILDING	2/0/2/3
Nature of Course	D (Theory Application)	

Pre-requisite(s): -

Course Objectives:

1	To grasp foundational concepts such as programming logic techniques, databases, user interface elements, and basic application logic to create robust LCNC solutions.
2	To get familiar with LCNC tools, HTML5/CSS3, ChatGPT, and discover their applications in streamlining development.
3	To create form-based applications with customized user interfaces for data collection and analysis.
4	To build workflow-driven applications that optimize business processes using automation triggers and logic.
5	To design and customize reports within LCNC applications to effectively visualize and communicate data insights.

Course Outcomes:

Upon completion of the course, students shall have ability to

C904.1	Explain LCNC development principles, identify use cases, and select suitable tools and techniques.	AN
C904.2	Design user interfaces and develop applications using drag-and-drop components and responsive layout techniques.	AP
C904.3	Develop dynamic form-based applications with validation, conditional logic, and data collection.	AN
C904.4	Integrate APIs and configure workflow automation using triggers and business logic.	AN
C904.5	Visualize application data using built-in reporting tools and finalize a comprehensive project solution.	AN

FOUNDATIONS OF LCNC AND UI DESIGN   **10**

Low-code no-code principles, citizen development and its role in business, benefits and limitations of LCNC, programming logic concepts, working with databases and user interface elements, overview of LCNC platforms, basic HTML5 and CSS3 for customization, ChatGPT for assistance in development, API integration basics, fundamentals of user-centered design, creating responsive interfaces, visual hierarchy and usability principles,

WORKFLOW AUTOMATION AND DATA VISUALIZATION   **10**

Form design using LCNC platforms, dynamic fields and conditional logic, multi-step forms and layout optimization, input validation and error handling, designing application logic, process automation through workflows, creating and managing custom triggers, integrating external services into workflows, debugging and optimizing automated processes. Designing and embedding interactive dashboards, choosing effective visualization types, working with real-time data sources, report creation and layout customization, grouping and filtering data, using built-in connectors for cloud services, configuring custom APIs for data fetch and sync, troubleshooting integration issues, testing system interoperability and performance,

ROLE-BASED ACCESS AND SECURITY PRACTICES   **10**

User authentication techniques, configuring user roles and access permissions, implementing secure data handling and validation, best practices in managing application sessions and

credentials, audit logging and activity tracking, protecting APIs and third-party integrations, enforcing secure deployment guidelines across LCNC applications.

Final capstone project integrating UI design, form development, workflow automation, API integration, and reporting, project planning and scope definition, iterative development and testing, debugging and error resolution, final deployment and presentation, course-end summative assessment and individual reflection.

	TOTAL (THEORY) PERIODS:	30

Lab Component:

1	Create a simple LCNC-based application to collect user data using form components.
2	Design a responsive user interface layout with text fields, dropdowns, and buttons.
3	Implement form validation rules and configure multi-step navigation between form sections.
4	Automate a workflow that sends notifications based on form submissions using triggers.
5	Create dynamic dashboards with charts to visualize collected data in real-time.
6	Integrate a third-party API into your application and display external data in a table.
7	Build and export a custom report with filtered and grouped data insights.
8	Use a GenAI tool like ChatGPT to generate field logic and UI text recommendations.
9	Configure user roles, permissions, and access control for multi-level users.
10	Develop a capstone LCNC project integrating forms, workflows, API calls, and reporting features.

	TOTAL (PRACTICAL)) PERIODS	30

23CS905	VIRTUALIZATION, CLOUD COMPUTING & SYSOPS	1/0/4/3

Nature of the Course: F (Theory Programming)

Pre-requisite(s): -

Course Objectives:

1	To understand core principles of IT virtualization, containerization, and cloud computing.
2	To learn to implement and manage virtualized infrastructure and storage systems.
3	To use Docker containers for efficient application deployment.
4	To explore AWS cloud services and architectures for scalable and resilient deployments.
5	To integrate GenAI tools for enhancing security and cloud operations.
6	To design and implement fault-tolerant cloud solutions with real-time use cases.

Course Outcomes:

Upon completion of the course, students shall have ability to

C905.1	Understand the foundational concepts of virtualization, containerization, and cloud deployment models.	U
C905.2	Implement and manage virtual machines, storage, and networking using hypervisors and cloud-based tools.	AP
C905.3	Explore containerization using Docker and distinguish it from traditional virtualization approaches.	AN
C905.4	Design secure and resilient cloud architectures using GenAI tools and AWS services.	AP
C905.5	Gain proficiency in AWS SysOps tasks including resource provisioning, automation, and infrastructure monitoring.	AP

VIRTUALIZATION AND CLOUD FOUNDATIONS   **5**

Capital expenditure vs operational expenditure in IT, cloud deployment patterns and service models (IaaS, PaaS, SaaS), just-in-time provisioning concepts, hypervisor types and architecture, creating and managing virtual machines using VirtualBox, introduction to virtual storage and networking, types of virtual networks and configurations.

CONTAINERIZATION AND INFRASTRUCTURE MANAGEMENT   **5**

Containerization fundamentals, how Docker differs from hypervisors, building Docker images with Dockerfile, running and managing Docker containers, creating and managing Docker networks, use cases for containerized workloads, integrating containers in cloud environments.

Utilizing GenAI tools for security analysis and compliance, introduction to AWS cloud infrastructure, regions and availability zones, AWS identity and access management (IAM), managing user accounts and billing with AWS Organizations, designing and implementing secure Virtual Private Clouds (VPC), configuring access control and network segmentation, introduction to CloudTrail for auditing.

SYSOPS ON AWS AND SCALABLE DEPLOYMENTS   **5**

Provisioning applications on AWS using EC2, managing block storage with EBS, hosting static data using S3, working with RDS for relational databases, configuring auto-scaling and load balancing, monitoring services with AWS tools, deploying fault-tolerant architectures using AWS services, hands-on experience with real-time deployment and infrastructure automation.

Final project focused on designing, implementing, and deploying a secure and scalable cloud-native application, infrastructure planning using VirtualBox and AWS, integration of Docker containers, applying GenAI tools for security evaluation, monitoring and optimization, project documentation, presentation, and summative evaluation.

	TOTAL (THEORY) PERIODS:	15

Lab Component:

1	Install and configure VirtualBox to create and manage multiple virtual machines.
2	Design and deploy a virtual network using host-only and bridged network adapters in VirtualBox.
3	Set up and test Docker containers by creating a Dockerfile and launching multi-container applications.
4	Create custom Docker networks and connect multiple containers for inter-container communication.
5	Provision and configure an EC2 instance on AWS and access it using SSH.
6	Create and attach Elastic Block Store (EBS) volumes to EC2 instances and perform mount operations.
7	Design and deploy a Virtual Private Cloud (VPC) with public and private subnets using AWS.
8	Use AWS IAM to create users, groups, and policies, and test access control scenarios.
9	Enable and analyze CloudTrail logs for auditing AWS account activities.
10	Plan and execute a project to deploy a secure, fault-tolerant web application using EC2, S3, RDS, and Docker containers.

	TOTAL (PRACTICAL)) PERIODS	60
	TOTAL PERIODS	75

TEXT BOOKS:

1	Tom Clark , "Designing and Implementing Linux Virtualization", Packt Publishing,

23CS906	CONTINUOUS MONITORING AND OBSERVABILITY	1/0/4/3
Nature of Course	F (Theory Programming)	

Pre-requisite(s): -

Course Objectives:

1	To understand the need for configuration management and infrastructure as code in cloud environments.
2	To learn to automate server configurations using Ansible and manage resources through AWS CloudFormation.
3	To apply observability principles to monitor AWS infrastructure using CloudWatch metrics, events, and alarms.
4	To configure monitoring dashboards and set up alerting mechanisms for proactive cloud operations.
5	To analyse AWS logs to troubleshoot, detect issues, and implement response strategies using GenAI tools.

Course Outcomes:

Upon completion of the course, students shall have ability to

C906.1	Understand the fundamentals of Configuration Management and Infrastructure as Code using Ansible and AWS CloudFormation.	U
C906.2	Apply Ansible to automate configuration tasks and manage cloud inventory using playbooks, variables, and modules.	AP
C906.3	Develop proficiency in designing and deploying AWS infrastructure using CloudFormation templates and stacks.	AN
C906.4	Monitor AWS infrastructure by setting up CloudWatch dashboards, custom metrics, events, and alarms.	AN
C906.5	Analyse AWS logs to detect patterns, optimize performance, and ensure system health.	AN

CONFIGURATION MANAGEMENT WITH ANSIBLE	**5**

Introduction to Configuration Management, Introduction to Ansible, Defining Inventory Files, Ansible Playbooks, Group and Host Variables, Ansible Modules and Galaxy,

INFRASTRUCTURE AUTOMATION AND MONITORING AWS INFRASTRUCTURE	**5**

AWS CloudFormation Overview, Writing YAML Templates, Defining Resources, Stack Management, Template Validation, Updating and Deleting Stacks, Linting Best Practices. Introduction to Observability, AWS CloudWatch Metrics, Creating Dashboards, Monitoring EC2, EBS, RDS, ELB, Creating Custom Metrics, Common Graphs and Visualizations.

CLOUDWATCH EVENTS, LOGS, AND ALERTS	**5**

CloudWatch Events and Triggers, setting up Alarms, Using AWS Logs for Troubleshooting, Log Insights, Automating Alert Responses, Using GenAI for Alert Analysis

Real-world implementation of monitoring solution using Ansible and CloudFormation, with complete observability via CloudWatch. Includes alert configuration and log analysis using GenAI.

	TOTAL (THEORY) PERIODS:	**15**

Lab Component:

1	Install and configure Ansible on a Linux system and define a basic inventory file.
2	Write and execute an Ansible playbook to configure Apache web server on EC2 instances.

3	Use Ansible variables and handlers to customize service deployment and restart services on change.
4	Create a CloudFormation template to deploy an EC2 instance and attach an EBS volume.
5	Validate and deploy a CloudFormation stack and update it to reflect infrastructure changes.
6	Set up CloudWatch to monitor EC2 instance metrics and create a custom dashboard.
7	Configure CloudWatch to collect and display metrics for EBS, RDS, and ELB services.
8	Create a CloudWatch alarm to notify when CPU utilization exceeds a defined threshold.
9	Analyse AWS CloudTrail logs to track API activities and detect unauthorized changes.
10	Simulate and respond to an infrastructure alert using automation and observability best practices.

	TOTAL (PRACTICAL)) PERIODS	**60**
	TOTAL PERIODS	**75**

TEXT BOOKS:

1	Jeff Geerling, "Ansible for DevOps: Server and Configuration Management for Humans", 1st Edition, Midwestern Mac, 2015.

STREAM IV - CYBER SECURITY

23CY901	CLOUD COMPUTING AND CONTAINERIZED VIRTUAL INFRASTRUCTURE	2/0/2/3

Nature of Course	D (Theory Application)

Pre-requisite(s): -

Course Objectives:

1	To understand the fundamental concepts of cloud computing, virtualization, and containerization.
2	To learn to deploy and manage virtual machines using hypervisor technologies.
3	To explore virtual networking and storage concepts in a cloud-based environment.
4	To implement containerization using Docker for lightweight and scalable workload management.
5	To apply GenAI tools to enhance cloud infrastructure security and risk analysis

Course Outcomes:

Upon completion of the course, students shall have ability to

C901.1	Explain cloud computing models, virtualization techniques, and infrastructure provisioning.	U
C901.2	Deploy and manage virtual machines using tools like VirtualBox.	AP
C901.3	Configure and manage virtual storage and networking systems.	AP
C901.4	Build and manage containerized applications using Docker.	AP
C901.5	Secure containerized and virtualized environments using GenAI-powered tools.	AP

CLOUD COMPUTING AND VIRTUALIZATION CONCEPTS	**10**

Capital Expenditure vs. Operational Expenditure, Cloud Deployment Patterns, Service Models (IaaS, PaaS, SaaS), Just-in-Time Provisioning, Auto-scaling and Elasticity, Types of Hypervisors and their use cases

VIRTUAL MACHINE, STORAGE MANAGEMENT AND DOCKER CONTAINERIZATION	**10**

Creating Virtual Machines using Oracle VirtualBox, Snapshot and Cloning, Resource Allocation and Optimization, Virtual Storage Concepts (Local and Remote), Creating and Managing Virtual Disks in Linux. Types of Virtual Networking (NAT, Bridged, Host-Only), IP Configuration and Access, Containerization with Docker, Docker vs. Hypervisors, Creating Docker Images with Dockerfile, Running and Networking Docker Containers,

GENAI-DRIVEN CLOUD SECURITY	**10**

Security Risks in Virtualized Infrastructure, Cloud Security Principles, Role-Based Access Control, Introduction to GenAI Tools for Threat Detection, GenAI-based Cloud Security Automation and Best Practices. Plan and implement a secure virtual and containerized cloud infrastructure; include hypervisors, Docker, and GenAI security components. Activities include architecture design, deployment, testing, documentation, and presentation.

	TOTAL (THEORY) PERIODS:	**30**

Lab Component:

1	Set up a virtual machine in Oracle VirtualBox and install a Linux OS.
2	Simulate just-in-time provisioning and auto-scaling using cloud deployment tools.
3	Configure virtual networks (NAT and bridged) and verify VM-to-VM connectivity.

4	Attach and partition virtual storage in a Linux-based virtual machine.
5	Create a Dockerfile and build a custom container image.
6	Deploy multiple Docker containers and link them via Docker networks.
7	Set up port forwarding in Docker and expose containerized services.
8	Compare and analyze resource usage between VMs and Docker containers.
9	Use a GenAI tool to identify vulnerabilities in a containerized setup.
10	Design and present a project on secure cloud infrastructure using virtualization and containers

	TOTAL (PRACTICAL)) PERIODS	30
	TOTAL PERIODS	**60**

TEXT BOOKS:

1	Virtualization Essentials — Matthew Portnoy, Wiley, 2nd Edition.
2	Docker: Up & Running — Shipping Reliable Containers in Production — Karl Matthias, Sean P. Kane, O'Reilly Media, 3rd Edition

23CY902	PENETRATION TESTING	1/0/4/3
Nature of Course	F (Theory Programming)	

Prerequisite: -

Course Objectives:

1	To introduce students to ethical hacking principles, attack methodologies, and threat modeling.
2	To enable learners to identify and exploit operating system, network, and web application vulnerabilities.
3	To train students in using penetration testing tools and techniques to simulate real-world cyberattacks.
4	To empower learners to evaluate and bypass security controls like firewalls, IDS/IPS, and authentication mechanisms.
5	To enable learners to develop GenAI-based scripts for automated penetration testing and real-time vulnerability detection

Course Outcomes:

Upon completion of the course, students shall have ability to

C902.1	Understand core ethical hacking concepts, vulnerabilities, and enumeration techniques	U
C902.2	Perform targeted exploitation of operating systems, networks, applications, and web services.	AP
C902.3	Evaluate and optimize tools for penetration testing, privilege escalation, and post-exploitation.	AN
C902.4	Evaluate and enhance security control effectiveness using standard frameworks and GenAI tools.	AN
C902.5	Design and implement a comprehensive penetration testing project simulating real-world threat scenarios.	AP

FUNDAMENTALS OF EXPLOITATION   **5**

Vulnerability Types and Exploits, System Enumeration Techniques, Operating System Attacks, Malware Threats and Payloads, Privilege Escalation Methods,

WIRELESS EXPLOITS AND APPLICATION EXPLOITATION TECHNIQUES   **5**

Network Scanning and Mapping, Exploiting Network Vulnerabilities, Wireless Network Attacks, Bluetooth and Mobile Exploits, Sniffing, Spoofing, and Hijacking. Web Application Vulnerabilities, SQL Injection and XSS, API and Webhook Exploits, Web Shells and Backdoors, Bypassing Security Controls

AUTOMATION AND GAP ANALYSIS   **5**

GenAI for Target Enumeration, Automated Exploit Scripting, Honeypots and Detection Evasion, Security Controls Mapping, NIST, CIS Benchmark Evaluation.

Project and Summative Assessment – Learners will execute a full-scale penetration test project that includes reconnaissance, exploitation, automation using GenAI, and security control evaluation

                                                      TOTAL PERIODS: **15**

	Lab Component:
1	Perform enumeration and vulnerability scanning using Nmap and Nikto.
2	Exploit an operating system vulnerability using Metasploit on Kali Linux.
3	Bypass user authentication using password-cracking tools like Hydra or John the Ripper.
4	Exploit a web application vulnerability such as SQL Injection or Cross-Site Scripting (XSS).
5	Simulate privilege escalation in a Linux or Windows environment.
6	Capture and analyze network traffic using Wireshark for session hijacking.
7	Exploit a vulnerable wireless network using tools like Aircrack-ng.
8	Develop a basic GenAI-assisted Python script for automated reconnaissance and scanning.
9	Map enterprise security controls and analyze configuration gaps using OWASP and CIS benchmarks.
10	Conduct a full-cycle penetration testing simulation including reporting and recommendations.

	TOTAL (Lab) PERIODS	60
	TOTAL PERIODS	**75**

23CY903	SECURITY OPERATIONS OF INFORMATION SYSTEMS	1/0/4/3
Nature of Course	F (Theory Programming)	

Prerequisite: -

Course Objectives:

1	To introduce foundational principles of incident response and security operations in modern information systems.
2	To train students to detect, respond to, and recover from various cybersecurity threats using real-time monitoring tools.
3	To equip learners with forensic investigation methods for effective threat identification and evidence preservation.
4	To enable students to apply and assess cybersecurity controls using industry frameworks like NIST and MITRE ATT&CK.
5	To guide learners in generating and automating incident response playbooks using GenAI and other modern tools.

Course Outcomes:

Upon completion of the course, students shall have ability to

C903.1	Describe the core concepts of incident response, policies, and operational security procedures	U
C903.2	Apply containment, eradication, and recovery strategies to manage cybersecurity incidents.	AP
C903.3	Investigate and analyze digital threats using forensic techniques and open-source tools.	AN
C903.4	Evaluate and improve GenAI-driven incident response playbooks based on threat scenarios.	AN
C903.5	Develop and present a functional SOC dashboard or case study applying threat detection and mitigation frameworks.	AP

FOUNDATIONS OF INCIDENT RESPONSE **5**

Incident types and lifecycle, Policy creation and compliance, Roles and responsibilities in IR, Stakeholder communication plan

CONTAINMENT RECOVERY TACTICS AND FORENSICS INVESTIGATION SECURITY CONTROLS **5**

, Initial response procedures, Containment strategies, Eradication methods, Recovery and post-incident activities. Log collection and preservation, Host and network forensics, Chain of custody, Timeline analysis and documentation.

GENAI INTEGRATION **5**

Threat intelligence mapping, SIEM dashboards and alerts, Security control implementation, Playbook generation using GenAI.

Develop and present an end-to-end SOC use-case scenario integrating SIEM, forensic investigation, and automated GenAI-based playbook.

	TOTAL PERIODS:	15

Lab Component:

1	Configure and deploy Wazuh SIEM and perform basic log ingestion.
2	Create an incident response policy document tailored to a small enterprise.

3	Simulate a containment and eradication scenario using Linux or Windows systems.
4	Collect and preserve forensic evidence from a compromised virtual machine.
5	Use Wazuh to generate alerts for brute-force attacks and unauthorized access.
6	Integrate MITRE ATT&CK mappings into a SIEM dashboard for threat tracking.
7	Develop a basic time-series chart from logs using Wazuh or ELK stack.
8	Generate a GenAI-assisted incident response playbook for ransomware.
9	Conduct a network traffic investigation and produce a report.
10	Design a custom SOC dashboard displaying security control effectiveness

	TOTAL (Lab) PERIODS	**60**
	TOTAL PERIODS	**75**

TEXT BOOKS:

1	Incident Response & Computer Forensics — Jason Luttgens, Matthew Pepe, Kevin Mandia; McGraw-Hill Education; 3rd Edition.

4	MITRE ATT&CK® for Enterprise: Design and Implementation Guide — MITRE Corporation; Open Source White Papers & Official ATT&CK Documentation.
5	Practical Threat Intelligence and Data-Driven Threat Hunting — Valentina Costa-Gazcon; Packt Publishing; Latest Edition.
6	Wazuh Documentation and ELK Stack Official Guides — Official Open Source Resources; Latest.

STREAM V - FULL STACK SOFTWARE DEVELOPMENT

23CS911	MANAGING AND QUERYING DATABASE (RDBMS) MySQL / POSTGRE SQL	2/0/2/3

Nature of Course	D (Theory Application)
Prerequisites	-

Course Objectives:

1	To introduce students to the structure and functioning of relational databases and the role of RDBMS.
2	To enable students to design normalized database schemas using Entity-Relationship (ER) diagrams and apply integrity constraints.
3	To teach students how to perform SQL operations to retrieve, manipulate, and manage data effectively using DDL, DML, and DQL commands.
4	To equip learners with the ability to ensure data consistency through transactions, triggers, stored procedures, and automation.
5	To familiarize learners with semi-structured data and explore the fundamentals of NoSQL for handling flexible data models.

Course Outcomes:

Upon completion of the course, students shall have ability to:

C911.1	Explain the role of RDBMS in organizing, securing, and ensuring data integrity.	U
C911.2	Design relational databases using ER diagrams and normalization to ensure minimal redundancy and high consistency.	AP
C911.3	Construct and execute SQL queries using various clauses, joins, and subqueries to manage and retrieve data.	AP
C911.4	Implement stored procedures, triggers, and transactions to automate and maintain consistency in data operations.	AN
C911.5	Build a practical database application integrating real-world scenarios and applying SQL automation and NoSQL for scalable solutions.	AP

QUERYING WITH SQL BASICS 10

SELECT Queries - MySQL Setup, SELECT, WHERE, AND/OR, comparison operators, String Functions, Date Functions. Joins - Inner Join, Outer Join, Left Join, Right Join, Primary Key, Foreign Key. Data Summarization - Aggregation Functions, Group By Clause, Having Clause, Order By Clause. Subqueries - Scalar Query, Tabular Query, Correlated/Non-Correlated Subqueries.

DATA MANIPULATION, SCHEMA DESIGN AND CONSISTENCY MANAGEMENT 10

DML Queries: Insert Query, Update Query, Delete Query, Index. Data Integrity – Primary Key, Foreign Key, UNIQUE, NOT NULL, CHECK. Database Design - Entities, Attributes, Entity Relationships, Normalization (1NF, 2NF, 3NF). DDL Commands - Create Command, Alter Command, Constraints (NOT NULL, UNIQUE, CHECK), Grant – Revoke Permissions. Database Consistency: ACID properties, Locking Mechanisms, Temporary Tables, Views. ACID Properties – Atomicity, Consistency, Isolation, Durability

AUTOMATING AND EXTENDING DATABASES 10

Automate Database Operations - Create Procedure, Create Trigger, Schedule Operations, Repetitive Task Automation. JSON and NoSQL - JavaScript Object Notation – JSON, JSON Datatype, JSON_OBJECT(), JSON_EXTRACT(), NoSQL Databases, XDevAPI, XDevAPI CRUD Methods.Design and implement a fully functional database system including schema design, query

operations, procedures, and automation aligned with a real-world industry scenario.

TOTAL THEORY: 30 PERIODS

LIST OF LAB EXPERIMENTS

1. Write SQL queries using SELECT, WHERE, ORDER BY, and GROUP BY on sample employee or sales database.
2. Perform INNER JOIN, LEFT JOIN, and SELF JOIN operations to combine multiple related tables.
3. Construct scalar and correlated subqueries to filter and retrieve nested data.
4. Insert, update, and delete data from tables using DML commands while maintaining integrity constraints.
5. Create ER diagrams using sample case studies and convert them into normalized schemas.
6. Define tables with PRIMARY KEY, FOREIGN KEY, and apply constraints using DDL.
7. Demonstrate ACID properties with transactions using COMMIT and ROLLBACK.
8. Write a stored procedure to calculate and return derived information (e.g., monthly sales report).
9. Create a trigger to log changes in a table when new rows are inserted or updated.
10. Parse and manipulate semi-structured data using JSON functions in MySQL and demonstrate a basic NoSQL structure.

TOTAL LAB	**30 PERIODS**
TOTAL	**60 PERIODS**

Text Books:	
1	Abraham Silberschatz, Henry F. Korth, and S. Sudarshan, "Database System Concepts", Seventh Edition, McGraw-Hill Education, 2020.

23CS912	JAVA / PYTHON: OBJECT-ORIENTED PROGRAMMING	2/0/2/3
Nature of Course	D (Theory Application)	

Pre-requisite(s): -

Course Objectives:

1	To introduce students to the basics of Java programming, covering core concepts such as variables, data types, operators, control structures, loops, and arrays.
2	To equip students with problem-solving skills by teaching them how to create and use functions, manipulate strings, and apply recursion.
3	To train students to implement sorting and searching algorithms, and understand access modifiers for efficient data handling and application security
4	To develop students' understanding of object-oriented programming (OOP) concepts, including classes, objects, inheritance, and polymorphism, to write structured, reusable, and maintainable code.
5	To teach students to design scalable and robust Java applications using advanced OOP principles such as abstract classes, interfaces, and encapsulation for real-world problem-solving.

Course Outcomes:

Upon completion of the course, students shall have ability to

C912.1	Learn the basics of Java programming, including variables, data types, loops, arrays, and decision-making structures.	U
C912.2	Develop problem-solving skills by creating functions, manipulating strings, and applying recursion to solve complex problems.	AP
C912.3	Dive into sorting, searching algorithms, and access modifiers to handle large datasets efficiently and secure your data.	AP
C912.4	Gain a solid understanding of OOP concepts like classes, objects, inheritance, and polymorphism to write clean, reusable, and maintainable code.	AN
C912.5	Design Robust Applications: Learn to design scalable Java applications using abstract classes, interfaces, and other advanced OOP principles for real-world problem-solving.	AP

JAVA FUNDAMENTALS AND MODULAR PROGRAMMING	**10**

Introduction to Java: Program Structure, println() Method, Variables, Datatypes, Operators, Scanner class. Control Structures: Relational Operators, Logical Operators, Ternary Operator, if Statement, if…else Statement, if…else if Statement, switch case, for Loop, while Loop, do…while Loop. Arrays: 1-Dimensional Arrays, 2-Dimensional Arrays, Array Operations, Debug Errors.

Modular Programming: Function Definition, Arguments, Parameters, Return Value, Exception Handling, try…catch Block, finally, throw and throws. Strings: String, String Buffer, String Builder, String Operations. Sorting Searching: Sorting, Bubble Sort, Searching, Linear Search, Recursion

OBJECT-ORIENTED PROGRAMMING ESSENTIALS	**10**

Introduction to Object Oriented Programming: Class, Object, Constructor, Default Constructor, Parameterized Constructor, this Keyword, Access Specifiers – private, public, protected, static, final.

INHERITANCE, POLYMORPHISM, AND INTERFACES	**10**

Inheritance and Polymorphism: Inheritance Types, super Keyword, Polymorphism, Overloading, Overriding, Static Binding, Dynamic Binding. Abstract Classes and Interfaces: Abstract Class, Abstract Methods, Interface.

Project and Summative Assessment: Project Planning and Design, Solution Development, Testing and Debugging, Review and Refactoring, Project Documentation and Presentation, Summative Course-end Assessment.

	TOTAL PERIODS:	30

Lab Component:

1	Implement a grading system that takes a student's marks and prints their grade based on a predefined scale.
2	Write a Java program to print the Fibonacci series up to n terms using a loop. Also do the same with the help of recursive function.
3	Write a program that checks if a given string is a palindrome.
4	Implement a program that reverses a string using StringBuilder or StringBuffer.
5	Implement a recursive function to calculate the greatest common divisor (GCD).
6	Write a program that takes two numbers as input and handles division by zero using try-catch-finally.
7	Create a custom exception called InvalidAgeException that gets thrown if a user enters an age below 18 for registration.
8	Create an "Employee Management System" using an abstract class for common attributes and behaviours, extended by specific employee types through inheritance. Use access modifiers for encapsulation, an interface for additional functionality like tax calculation, and demonstrate method overriding in subclasses.
9	Develop a Banking System with a base class for bank accounts, using static variables for shared attributes. Extend it to modify withdrawal behaviour via method overriding, enforce a minimum balance, and use the final keyword to restrict modifications while ensuring encapsulation.

23IT911	WEB DEVELOPMENT AND UI/UX ESSENTIALS	2/0/2/3
Nature of Course	D (Theory Application)	
Pre requisites	Nil	

Course Objectives:

1.	To teach students how to build responsive websites that automatically adapt to various screen sizes and devices, ensuring a consistent and optimal user experience.
2.	To equip students with the ability to use the Bootstrap framework to rapidly develop responsive, mobile-friendly layouts with a consistent and professional look.
3.	To enable students to add interactivity to web pages using modern JavaScript (ES6), incorporating features that make web applications dynamic and engaging.
4.	To familiarize students with using generative AI tools like ChatGPT to assist in generating, optimizing, and troubleshooting for increased productivity.
5.	To train students in applying modern web development practices, including testing, debugging, and refining web pages to deliver seamless functionality and user experience.

Course Outcomes

Upon completion of the course, students shall have ability to

C911.1	Build websites that automatically adjust to different screen sizes, ensuring optimal user experience across all devices.	[AP]
C911.2	Choose the latest HTML and CSS standards to structure and style web pages, creating rich, accessible, and visually appealing designs.	[AP]
C911.3	Make use of the power of the Bootstrap framework to accelerate the development of responsive and consistent layouts.	[AP]
C911.4	Model interactive features to your pages using modern JavaScript (ES6), making your web applications engaging and dynamic.	[AP]
C911.5	Utilize ChatGPT to assist in generating HTML/CSS code and JavaScript functionality, speeding up the development process and improving productivity.	[AP]

WEBPAGE STRUCTURE, STYLING, AND RESPONSIVE DESIGN   10 Hours

Webpage: HTML Document Anatomy, Markup Language, Tags, Paired Tags, Unpaired Tags, HTML5 Elements – Heading, Paragraph, Image, Anchor, List, Live Server Deployment, Emmet Toolkit. Semantic Design: Semantic Elements, Header, Nav, Article, Footer, Section, Table, ARIA Labels. Styling: Cascading Style Sheets, CSS Selectors, CSS Properties, Page Layouts, CSS Box Model, Block Element, Inline Element, Position Properties, Z-Index, Flexbox Model. Responsive Webpage Design: Responsive Design Patterns, CSS Flexbox, CSS Grid, CSS Media Query, Bootstrap Framework, Bootstrap Grid System, Bootstrap Components, Bootstrap Utilities

JAVASCRIPT BASICS, CONTROL STRUCTURES, UNIT TESTING, ARRAYS, OBJECTS, AND API INTEGRATION   10 Hours

Introduction to JavaScript: Variables, Constants, Declarations, Hoisting, Primitive Datatypes, Literals, Template Literals, Operators, typeof operator. Control Structures: Conditional Constructs, if statement, if…else statement, if…else if statement, Nested if, switch case, Loop Constructs, for loop, while loop, do…while loop. Modular Programming: Function Definition, Function Call, Arguments, Parameters, Return Values, Variable Scope, Default Parameters, In-built Functions. Unit Testing: Unit Testing, Mocha, Chai, describe() Function, it() Function, Mocha Hooks.

Arrays and Objects: Data modelling, Object, Property, Methods, Array Structure, Array Length, Indexing, for…of Loop, Array Destructuring, Spread Operator, Array Methods, Arrow Function. JSON and REST APIs: JavaScript Object Notation – JSON, Conversions, Client-Server Architecture, Representational State Transfer – REST, HTTP, Request, Response, HTTP Methods, Status Codes

DOM MANIPULATION AND ASYNCHRONOUS PROGRAMMING   10 Hours
DOM: Document Object Model - Elements, Properties and Methods, Events, Form Validation. JavaScript Promise Object: Synchronous, Asynchronous, Callbacks, Promise Object, Axios API.

	TOTAL PERIODS	**30**

Laboratory Component:

List of Experiments

1. Create a webpage using HTML5 semantic elements to showcase two historical landmarks of your country, including a header, main content section with images, and a footer.
2. Style a navigation bar using CSS properties and selectors to include a brand logo, menu items, and a call-to-action button.
3. Implement a responsive webpage with a fixed header and footer while allowing the main content to scroll, demonstrating the use of CSS position properties and the Z-index.
4. Create a simple calculator which log the results along with their data types using the type of operator.
5. Create a function that takes a number as input and returns its factorial.
6. Write a function that checks if a given number is prime or not.
7. Create a shopping cart system where users can add, remove, and view cart items dynamically using DOM manipulation.
8. Implement form validation for a login form, ensuring the username is at least 5 characters long. Validate a password field to require at least one uppercase letter, one number, and a minimum of 8 characters. Display error messages dynamically if form validation fails, preventing submission.
9. Create a JavaScript program that fetches weather data asynchronously using the Axios API and displays temperature and conditions.
10. Create a JS program to fetch posts from https://jsonplaceholder.typicode.com/posts and display the title and body of the first 5 posts. Handle failed responses gracefully.

23IT912	BUILD SINGLE-PAGE APPLICATIONS USING REACT	2/0/2/3
Nature of Course	D (Theory Application)	
Pre requisites	Nil	

Course Objectives:

1.	To introduce students to the fundamentals of React, covering key concepts like components, JSX syntax, the virtual DOM, and declarative rendering to build dynamic single-page applications (SPAs).
2.	To teach students how to manage component state using React Hooks and retrieve data from remote servers to create interactive and dynamic application behaviour.
3.	To equip students with the skills to write and run unit tests using Jest and React Testing Library to ensure the functionality and reliability of React applications.
4.	To train students in styling React components using modern CSS techniques and Material Design principles to develop clean, responsive, and user-friendly interfaces
5.	To enable students to handle user input through forms, build flexible and validated forms using react-hook-form, and implement seamless navigation across multiple views using React Router.

Course Outcomes

Upon completion of the course, students shall have ability to

C912.1	Outline React fundamentals, including components, JSX, the virtual DOM, and declarative rendering techniques to build dynamic SPAs.	[U]
C912.2	Model component state using React Hooks and fetch data from remote servers for dynamic application behaviour.	[AP]
C912.3	Apply unit testing with Jest and React Testing Library to ensure application reliability.	[AP]
C912.4	Model React components using modern CSS techniques and Material Design for responsive, user-friendly interfaces.	[AP]
C912.5	Build user interactions with forms, create flexible forms using react-hook-form, and implement navigation with React Router for multi-page apps.	[AP]

REACT FUNDAMENTALS AND SPA STRUCTURE 10

React Fundamentals: Components, JSX, Virtual DOM, Declarative Rendering. Static Single Page Applications (SPA): SPA vs MPA (Multi-Page Application), Structure, Design, and Layout. Rendering components: Conditional rendering, lists and keys, props

STATE MANAGEMENT AND DATA FETCHING 10

State Management: useState, Component State, Event Handling, lift state up. Data Fetching: Remote Data Retrieval, useEffect.

STYLING, FORM HANDLING IN REACT, ADVANCED FORMS AND ROUTING 10

Styling Components: CSS Modules, CSS in JS, Material Design. Form Handling: Controlled Components, Forms in React.

Extensible Forms: react-hook-form, Form Validation, Handling Dynamic Inputs. Routing: React Router, View Navigation.	
TOTAL PERIODS	**30**

Laboratory Component:
List of Experiments

1. Create a React component that displays a personalized welcome message using JSX and updates dynamically based on user input.
2. Implement a navigation bar component with static links and explain the advantage of using reusable components in SPAs.
3. Create a button component that accepts a label as a prop and displays an alert with a custom message when clicked.
4. Write a simple unit test using Jest and React Testing Library to check if a button click updates the displayed count.
5. Lift state up by creating a parent component that tracks a selected item and updates child components when the selection changes.
6. Implement a to-do list using controlled components, where users can add, edit, and delete tasks using form inputs.
7. Create a form using react-hook-form that validates user input, ensuring the email and password fields meet specific criteria.
8. Use useRef to manage focus on an input field when a button is clicked in a form component.
9. Build a React Router setup with at least three pages (Home, About, Contact) and navigation links between them.
10. Fetch product details from an API and display them in a styled card layout using Material UI components.
11. Design a responsive navigation bar using Material UI components and ensure it adapts to different screen sizes.
12. Implement a login form using Material UI, applying proper form validation and displaying error messages when input criteria are not met.

23IT913	BUILD BACK-END APPLICATION USING SPRING BOOT / FAST API	1/0/4/3

Nature of Course	F (Theory Programming)
Pre requisites	-

Course Objectives:

1.	To train students to write unit and integration tests for Java applications using JUnit 5 and Mockito, ensuring code reliability and correctness.
2.	To equip students with the skills to manage and manipulate data effectively using Java Collections such as Lists, Sets, and Maps with generics for type-safe data handling.
3.	To teach students to build scalable and modular Java applications using Spring Boot, applying Inversion of Control (IoC) and core annotations.
4.	To enable students to implement data persistence in Java applications using Hibernate and JPA within Spring Boot projects for efficient database operations.
5.	To guide students in developing RESTful APIs with Spring Boot, performing CRUD operations, validating input, and handling exceptions to build backend services.

Course Outcomes

Upon completion of the course, students shall have ability to

C913.1	Apply unit and integration tests for Java applications using JUnit 5 and Mockito.	[AP]
C913.2	Model data using Java Collections like Lists, Sets, and Maps with generics	[AN]
C913.3	Build Java apps using Spring Boot using IoC and annotations with data persistence using Hibernate and JPA.	[AP]
C913.4	Develop RESTful APIs with Spring Boot, handling CRUD operations, validations, and exceptions	[AP]
C913.5	Apply MongoDB as a NoSQL data storage	[AN]

JUNIT TESTING AND JAVA COLLECTIONS   **5**

JUnit Testing with Maven: Introduction to JUnit 5, adding JUnit to Maven projects, lifecycle annotations, assertion methods, parameterized tests. Java Collections: Working with Lists, Sets, and Maps using generics; ArrayList operations, iterating with Iterators, sorting, searching, and performing CRUD operations on collections. Unit Testing Collections: Writing JUnit tests for verifying collection operations.

SPRING BOOT BASICS, REST API DEVELOPMENT, HIBERNATE, JPA, AND MONGODB INTEGRATION   **5**

Spring & Spring Boot Basics: Introduction to Spring Framework, benefits of Spring Boot, project setup with Spring Initializr, Inversion of Control (IoC), Dependency Injection, and core annotations. Building RESTful APIs: REST architecture, creating endpoints with @RestController, entity mapping, and integrating Spring Data JPA repositories. Hibernate & JPA: Introduction to Hibernate, differences with JPA, configuration in Spring Boot, entity lifecycle management, Session, Session Factory, and Entity Manager usage. CRUD Operations in REST APIs: Implementing Create, Read, Update, Delete operations, HTTP status codes, API naming conventions, and testing APIs using Postman. MongoDB Integration: Configuring Spring Boot with MongoDB, defining documents with @Document,

performing CRUD operations using Mongo Repository, and executing basic queries.

| **EXCEPTION HANDLING AND APPLICATION TESTING** | **5** |

Exception Handling & Input Validation: Using @Controller Advice and @Exception Handler for global error management, validating inputs with annotations like @Valid and @NotNull, creating custom exceptions, and structured error responses. Unit & Integration Testing with JUnit & Mockito: Writing unit tests for services and repositories, mocking dependencies using Mockito, and performing integration tests with @SpringBootTest.

| | **Total Hours** | **15** |

Laboratory Component: List of Experiments

1. Write unit tests using JUnit 5 to verify method's correctness, using assertions and lifecycle annotations.

2. Create a HashSet of employee IDs and a TreeSet of department names. Add, remove, and check for the presence of elements. Also, create a HashMap<String, String> mapping employee IDs to names.

3. Create a Student entity with fields id, name, and course. Configure Hibernate in your Spring Boot project and use JpaRepository to persist and retrieve student records in an H2 in-memory database.

4. Develop a REST API for managing Product records with Create, Read, Update, and Delete operations using @RestController and JpaRepository. Test your API using Postman and check the response codes.

5. Add validation to the Product entity so that the name cannot be blank and the price must be positive. Handle invalid input using @ControllerAdvice and return custom error messages for exceptions.

6. Create a Customer document class with fields id, name, and city. Configure MongoDB with Spring Boot and use MongoRepository to perform CRUD operations. Write query methods to find customers by city.

7. Write unit tests for the service layer of your Product API using Mockito to mock repository dependencies. Also, create an integration test using @SpringBootTest to test your API's end-to-end behavior.

OPEN ELECTIVE

23CS001	Programming with Data Structures	2/0/2/3
Nature of Course	J (Programming)	
Prerequisites		

Course Objectives:

1	Introduce fundamental data structures and algorithmic techniques essential for solving computational problems efficiently.
2	Apply data structure concepts to design and analyze algorithms for real-world applications.
3	Teach students how to evaluate the efficiency of different data structures and algorithms using Asymptotic notations.
4	Gain insights into linear and non-linear data structures like stacks, queues, trees, and graphs.
5	Apply Sorting and searching techniques in Real world applications.

Course Outcomes:

Upon completion of the course, students shall have ability to:

C001.1	Analyze fundamental data structures such as arrays and linked lists	[AN]
C001.2	Utilize stacks and queues to develop solutions for real-world computational challenges.	[AP]
C001.3	Examine binary trees, binary search trees (BST), traversal methods, and searching algorithms, while assessing their efficiency using complexity analysis.	[AP]
C001.4	Evaluate the effectiveness of various graph algorithms and hashing techniques in solving computational problems.	[AN]
C001.5	Design efficient solutions using sorting and searching techniques to optimize problem-solving in real-world applications.	[AP]

MODULE I - INTRODUCTION TO LINEAR DATA STRUCTURES 12

Data Structures Introduction & Linked Lists - Understanding Data Structures and their importance, Comparison: Arrays vs Linked Lists, Types of Linked Lists: Singly Linked List: Creation, Insertion, Deletion, and Traversal, Doubly Linked List: Creation, Insertion, Deletion, and Traversal, Circular Linked List: Creation and Applications, Stack Implementations: Stack Model and Concept, Array and Linked List Implementations of Stacks. Applications of Stacks-Infix, Prefix, and Postfix Expressions: Conversion and Evaluation, Balancing Parentheses using Stacks. Queue Implementations - Array and Linked List Implementations of Queues, Priority Queue and Applications

MODULE II – NONLINEAR DATA STRUCTURES 8

Trees: Creation, Traversal, and Searching - Binary Tree: Structure, Creation, Insertion, and Deletion, Binary Search Tree (BST): Concept and Operations, Tree Traversals: Inorder, Preorder, Postorder and Level Order Traversals. Graph Implementations - Weighted and Directed Graphs, Adjacency Matrix and Adjacency List Implementations. Graph Traversal Techniques: Breadth-First

Search (BFS) and Depth-First Search (DFS)

MODULE III - HASH FUNCTIONS, SORTING AND SEARCHING TECHNIQUES   10

Hashing and Techniques: Direct Address Table, Hash Functions, Collision Resolution Techniques: Linear Probing, Quadratic Probing, Double Hashing. Sorting Algorithms - Basic Sorting Techniques: Bubble Sort, Insertion Sort, Selection Sort: Implementation and Time Complexity Analysis. Advanced Sorting Techniques: Merge Sort and Quick Sort: Implementation and Time Complexity Analysis. Searching Algorithms - Linear Search and Binary Search, Applications, Time Complexity Analysis of Searching.

TOTAL HOURS (Theory): 30

List of Lab Experiments:

1. Implement Singly Linked List operations (Creation, Insertion, Deletion & Traversal)
2. Implement Doubly Linked List operations (Creation, Insertion, Deletion & Traversal)
3. Implement Circular Linked List operations and explore its applications
4. Implement Stack operations using Array and Linked List
5. Evaluate Infix, Prefix, and Postfix Expressions using Stacks
6. Implement Queue operations using Array and Linked List
7. Implement Binary Tree operations (Creation, Insertion, Deletion) and Tree Traversals
8. Implement Breadth-First Search (BFS) and Depth-First Search (DFS) on Graphs
9. Implement Hashing with Collision Resolution Techniques (Linear and Quadratic Probing)
10. Implement Sorting Algorithms and evaluate their time complexities.
11. Implement Searching Techniques (Linear Search & Binary Search) evaluate their time complexities.

23CS002	NETWORKS AND SECURITY	2/0/2/3
Nature of Course	D (Theory Application)	
Pre requisites	-	

Course Objectives:

1	To analyze the differences between IPv4 and IPv6 protocols in various networking scenarios.
2	To evaluate the effectiveness of VLAN configurations in optimizing network performance.
3	To design secure WLANs using 802.1X authentication and AAA protocols to enhance network security.
4	To critically assess the role of SD-WAN in modern network architectures, focusing on scalability and flexibility.
5	To develop strategies for implementing network redundancy using Spanning Tree Protocol and VRRP for high availability.

Course Outcomes

Upon completion of the course, students shall have ability to

C002.1	To describe the fundamentals of networking protocols such as TCP/IP, OSI model, and encapsulation.	[U]
C002.2	To explain the configuration and management of networking devices, including switches and routers.	[U]
C002.3	To apply VLAN configurations and IP addressing to create efficient network segmentation.	[AP]
C002.4	To analyze the performance of various routing protocols like OSPF and static routing in different network setups.	[AN]
C002.5	To compare the benefits and limitations of different types of physical media in LAN and WAN environments.	[AN]

FOUNDATIONS OF NETWORKING AND PROTOCOLS   **10**

Introduction to Networking- LAN, WAN and components- OSI model & encapsulation- Different types of physical media Compare unicast, multicast, and broadcast, TCP/IP stack, IPv4 & IPv6- Different types of networking devices. Switching Fundamentals Connecting and accessing switch - Initial switch setup-Configuring VLANs, tagging, and IP addressing- Usage of LLDP and ICMP for network discovery and diagnosis-Configure link aggregation. Basic IP Setup: Inter-VLAN routing IPv4 & IPv6- DHCP relay-Static IP routing and configuration, single area OSPF- Basics of VoIP and its Advantages-Types of VoIP.

NETWORK SWITCHING TECHNOLOGIES   **10**

Network Redundancy: Spanning Tree- VRRP and VSX - VSF configuration - Auto VSF - VSF MAD. Device Profiling: Use of device profiling - LLDP and MAC profiling - Establishing connections between APs and HPE- Setting up AP's. WLAN Fundamentals: Fundamentals of 802.11, RF frequencies and channels- RF Patterns and coverage including SNR - Roaming standards and QOS requirements - RF design - Configuring WLANs. SD-WAN Fundamentals of SD-WAN - Future of SD-WAN - SD-WAN edge devices - SD-WAN gateway controllers - Configuring SD-WANs - Benefits of SD-WAN - Understanding WLC.

IMPLEMENTING SECURE WLANS   **10**

AAA Security Frameworks - 802.1X authentication - Configuring secure WLANs - Roles and

Access rules - Guest Access: setting up captive portal authentication- Configuration of guest WLANs- WLAN Security: WLAN security certificates- Cloud authentication. Network Security: Security devices (Firewalls, Routers and Wireless API's)-Principles of Network Security-Types of Security-Pillars of Network Security-Types of Network security Protections.

	TOTAL PERIODS (Theory)	**30**

S. No	**List of Experiments**
1.	Configuring and accessing a Switch in Packet Tracer
2.	Configure and analyze IPv4 and IPv6 addressing schemes and subnetting
3.	Design and simulate VLAN configuration with inter-VLAN routing and static IP routing
4.	Simulate DHCP relay and basic VoIP setup
5.	Configure STP (Spanning Tree Protocol) and analyze redundancy in network switches
6.	Setup and test VRRP (Virtual Router Redundancy Protocol)
7.	Implement secure WLAN setup using 802.1X authentication with RADIUS
8.	Create and analyze WLANs with guest access via captive portals
9.	Analyze OSPF routing protocol performance through simulation
10.	Emulate SD-WAN-like behavior using static routes and redundancy simulation

	TOTAL PERIODS (Lab)	**30**

23CS002	Analysis of Algorithms	2/0/2/3
Nature of Course	J (Programming)	
Prerequisites	-	

Course Objectives:

1	To introduce algorithm fundamentals and techniques for analyzing time and space complexity.
2	To develop problem-solving skills using major algorithmic paradigms such as Brute Force, Divide & Conquer, Dynamic Programming, Greedy, Backtracking, and Branch & Bound.
3	To enable students to design optimal and efficient algorithms for real-world computing and engineering problems.
4	To provide practical understanding of recursive algorithms and the implementation of classical problems like sorting, searching, and graph optimization.
5	To build ability to evaluate computational limitations through complexity classes and performance bounds.

Course Outcomes:

Upon completion of the course, students shall have ability to:

C002.1	Analyze and compare algorithm efficiency using time and space complexity	[AN]
C002.2	Apply Brute Force and Divide & Conquer techniques to solve fundamental computational problems.	[AP]
C002.3	Develop optimized solutions using Dynamic Programming for problems with overlapping subproblems	[AP]
C002.4	Design algorithmic solutions using Greedy, Backtracking & Branch & Bound.	[AP]
C002.5	Model real-world computational problems into a form amenable to brute-force solution, implement them	[AN]

TIME COMPLEXITY ANALYSIS & BRUTE FORCE   **10**

Notion of an Algorithm, Fundamentals of the Analysis of Algorithmic Efficiency. Time Complexity Analysis: Mathematical analysis of recursive and non-recursive algorithms, Sieve of Sundaram. Recursion: Concept of recursion, base cases, and recursive problem-solving strategies. Introduction to Brute Force – String Matching

DIVIDE AND CONQUER & DYNAMIC PROGRAMMING   **10**

Divide and Conquer Methodology – Binary Search – Merge sort – Quick sort – Heap Sort - Multiplication of Large Integers. Dynamic programming – Principle of optimality - Optimal Binary Search Trees – Knapsack Problem and Memory functions.

GREEDY TECHNIQUE, BACKTRACKING & BRANCH & BOUND   **10**

Greedy Technique – Container loading problem - Prim's algorithm and Kruskal's Algorithm – 0/1 Knapsack problem - Huffman Trees. Backtracking — n-Queen problem — Hamiltonian Circuit Problem — Subset Sum Problem. Branch and Bound —Knapsack Problem — Travelling Salesman Problem

TOTAL HOURS (Theory): 30

List of Lab Experiments:

1.   Implement Sieve of Sundaram to generate prime numbers and evaluate its efficiency

2.   Implement recursive algorithms with proper base cases (Factorial / Fibonacci / Tower of Hanoi) and compare with iterative versions.

3.   Implement Divide & Conquer searching and sorting algorithms Binary Search

4.   Implement Divide & Conquer searching and sorting algorithms Merge Sort

5.	Implement Divide & Conquer searching and sorting algorithms Quick Sort
6.	Implement Travelling Salesman Problem
7.	Implement 0/1 Knapsack Problem
8.	Implement Prims & kruskals Algorithm.
9.	Implement n queen Problem.
