

SRI KRISHNA COLLEGE OF ENGINEERING AND TECHNOLOGY

An Autonomous Institution | Approved by AICTE | Affiliated to Anna University | Accredited by NAAC with A++ Grade
Kuniamuthur, Coimbatore – 641008

Phone : (0422)-2678001 (7 Lines) | Email : info@skcet.ac.in | Website : www.skcet.ac.in

Curriculum & Syllabi

Regulation 2022

2022-2026 Batch

**DEPARTMENT OF COMPUTER SCIENCE AND
ENGINEERING (CYBER SECURITY)**

SRI KRISHNA COLLEGE OF ENGINEERING AND TECHNOLOGY

An Autonomous Institution | Approved by AICTE | Affiliated to Anna University | Accredited by NAAC with A++ Grade

Kuniamuthur, Coimbatore – 641008

Phone : (0422)-2678001 (7 Lines) | Email : info@skcet.ac.in | Website : www.skcet.ac.in

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING(CYBER SECURITY)

(Batch 2022-2026)

VISION OF THE INSTITUTION

- To Produce Globally Competitive Engineers with High Ethical Values and Social Responsibilities.

MISSION OF THE INSTITUTION

- To impart the highest quality state-of-the-art technical education by providing impetus to innovation, research, and development and empowering students with entrepreneurship skills.
- To instill ethical values, imbibe a sense of social responsibility, and strive for societal well-being.
- To identify the needs of society and offer sustainable solutions through outreach programs.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING(CYBER SECURITY)

VISION OF THE DEPARTMENT

- To be a globally renowned academic department for quality education and research in the field of Cyber security with ethical values and social commitment

MISSION OF THE DEPARTMENT

- To Impart comprehensive technical education to produce highly competent Cyber security professionals and Researchers
- Provide an academic environment with state-of-the-art technological infrastructure to provide scalable cyber security solutions
- Impart ethics, Social responsibility and necessary professional, leadership skills through student centric activities

I. PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)	
PEO 1	Get recognized as effective professionals for their applied skills, problem solving capabilities and professional skills in the field of cyber security
PEO 2	Enrich skills and adopt emerging cyber security needs to pursue life-long learning and serve the society with social concern and code of ethics

II. PROGRAMME OUTCOMES (POs)	
PO 1	Engineering Knowledge: Apply the knowledge of basic sciences and engineering fundamentals to solve engineering problems.
PO 2	Problem Analysis: Analyze the complex engineering problems and give solutions related to chemical & allied industries
PO 3	Design/ development of solutions: Identify the chemical engineering problems, design and formulate solutions to solve both industrial & social related problems.
PO 4	Conduct investigations of complex problems: Design & conduct experiments, analyze and interpret the resulting data to solve Chemical Engineering problems.
PO 5	Modern tool usage: Apply appropriate techniques, resources and modern engineering & IT tools for the design, modelling, simulation and analysis studies.
PO 6	The engineer and society: Assess societal, health, safety, legal and cultural issues and their consequent responsibilities relevant to professional engineering practice.
PO 7	Environment and sustainability: Understand the relationship between society, environment and work towards sustainable development.
PO 8	Ethics: Understand their professional and ethical responsibility and enhance their commitment towards best engineering practices.
PO 9	Individual and team work: Function effectively as a member or a leader in diverse teams, and be competent to carry out multidisciplinary tasks.
PO 10	Communication: Communicate effectively in both verbal & non-verbal and able to comprehend & write effective reports.
PO 11	Project management and finance: Understand the engineering and management principles to manage the multidisciplinary projects in whatsoever position they are employed.
PO 12	Life-long learning: Recognize the need of self-education and life-long learning process in order to keep abreast with the ongoing developments in the field of engineering

III. PROGRAMME SPECIFIC OUTCOMES (PSOs)

The Graduates of **B.E – COMPUTER SCIENCE AND ENGINEERING (CYBER SECURITY)** will be able to:

PSO 1	Attain the policies in information assurance and analyze the factors in an existing system and design implementations to comprehend and anticipate future challenges
PSO 2	Implement innovative cyber security solutions using standard tools, practices and technologies without compromising the privacy of individuals and entities
PSO 3	Use cyber security and cyber forensics software/tools. Design cyber-security strategies and assess cyber-security risk management policies to protect an organization's information and assets.

IV. V. MAPPING OF PEOs WITH POs

PEO	POs											
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12
1	3	3	3	3	2	2	–	1	2	1	1	2
2	3	3	3	3	3	2	–	–	2	–	–	2
	1- low, 2 - medium, 3 - high, '–' - no correlation											

VI. MAPPING OF PEOs WITH PSOs

	PSO 1	PSO 2	PSO 3
PEO 1	3	3	3
PEO 2	3	3	2

AUTONOMOUS CURRICULA AND SYLLABI

Regulations 2022

SEMESTER I							
<u>S.No</u>	Course Code	Course Title	L/T/P	Contact Hrs/Wk	Credits	Ext/Int	Cat.
Theory (Internal 40 Marks & External 60 Marks)							
1	22MA103	Linear Algebra and Calculus	3/1/0	4	4	60/40	BSC
2	22EE111	Basics of Electrical and Electronics Engineering	2/1/0	3	3	60/40	ESC
Theory with Practical's (Internal 50 Marks & External 50 Marks)							
3	22IT101	Application Development Practices	3/0/2	5	4	50/50	PCC
4	22CS101	Problem Solving using C++	3/0/2	5	4	50/50	PCC
5	22CH101	Engineering Chemistry	3/0/2	5	4	50/50	BSC
6	22EN101	Technical Communication Skills	2/0/2	4	3	50/50	HSMC
Practical's (Internal 60 Marks & External 40 Marks)							
7	22EE114	Basics of Electrical and Electronics Engineering Laboratory	0/0/2	2	1	40/60	ESC
Mandatory Course (Internal 100 Marks)							
8	22MC101	Mandatory Course I (Induction Programme)	Three weeks		0	0/100	MC
TOTAL			28		23	800	

SEMESTER II							
<u>S.No</u>	Course Code	Course Title	L/T/P	Contact Hrs/Wk	Credits	Ext/Int	Cat.
Theory (Internal 40 Marks & External 60 Marks)							
1	22GE201	Universal Human Values	3/0/0	3	3	60/40	HSMC

2	22MA203	Mathematical Foundations of Computer Science	3/1/0	4	4	60/40	BSC
3	22TA101	Heritage of Tamils	1/0/0	1	1	60/40	HSMC
Theory with Practical's (Internal 50 Marks & External 50 Marks)							
4	22CS201	Data Structures and Algorithms	3/0/2	5	4	50/50	PCC
5	22IT201	Database Management Systems	3/0/2	5	4	50/50	PCC
6	22AD201	Java Programming	3/0/2	5	4	50/50	ESC
7	22PH201	Physics	3/0/2	5	4	50/50	BSC
Mandatory Course (Internal 100 Marks)							
8	22MC102	Mandatory Course 2	2/0/0	2	0	0/100	MC
TOTAL				30	24	800	

SEMESTER III							
<u>S.No</u>	Course Code	Course Title	L/T/P	Contact Hrs/Wk	Credits	Ext/Int	Cat.
Theory (Internal 40 Marks & External 60 Marks)							
1	22CY301	Cyber Security Essentials	3/0/0	3	3	60/40	PCC
2	22MA302	Random variable and Statistics	3/1/0	4	4	60/40	BSC
3	22TA201	Tamils and Technology	1/0/0	1	1	60/40	HSMC
Theory with Practical's (Internal 50 Marks & External 50 Marks)							
4	22IT302	Web Technology	1/0/4	5	3	50/50	PCC
5	22CS301	Advanced Java Programming	1/0/4	5	3	50/50	PCC
6	22AD301	Design and analysis of algorithms	1/0/4	5	3	50/50	PCC
7	22CS403	Operating Systems	3/0/2	5	4	50/50	PCC
Mandatory Course (Internal 100 Marks)							
8	22MC1XX	Mandatory Course: 3	2/0/0	2	0	0/100	MC
TOTAL				30	21	800	

SEMESTER IV							
<u>S.No</u>	Course Code	Course Title	L/T/P	Contact Hrs/Wk	Credits	Ext/Int	Cat.
Theory (Internal 40 Marks & External 60 Marks)							
1	22CY401	Ethical Hacking	3/1/0	4	4	60/40	PCC
Theory with Practical's (Internal 50 Marks & External 50 Marks)							
2	22CY402	Access Control and Identity management	3/0/2	5	4	50/50	PCC
3	22CY403	Auditing IT Infrastructure for Compliance	3/0/2	5	4	50/50	PCC
4	22CS402	Web Frameworks	1/0/4	5	3	50/50	PCC
5	22AD401	Cloud Computing	1/0/4	5	3	50/50	PCC
6	22IT402	Software Testing	1/0/4	5	3	50/50	PCC
TOTAL				29	21	600	

SEMESTER V							
<u>S.No</u>	Course Code	Course Title	L/T/P	Contact Hrs/Wk	Credits	Ext/Int	Cat.
Theory (Internal 40 Marks & External 60 Marks)							
1	22CY501	Internet Security	3/0/0	3	3	60/40	PCC
2	22CY502	Cloud Security	3/0/0	3	3	60/40	PCC
3	22CY503	Python for Data Analysis	3/0/0	3	3	60/40	PCC
4	22OEXXX	Open Elective 1	3/0/0	3	3	60/40	OEC
5	22XXXXX	Professional Elective – I	3/0/0 (or) 0/0/6	3/6	3	60/40 (or) 40/60	PEC
6	22CYXXX	Professional Elective – II	3/0/0	3	3	60/40	PEC
Practical's (Internal 60 Marks & External 40 Marks)							
7	22CY504	Python for Data Analysis Laboratory	0/0/3	3	1.5	40/60	PCC

8	22CY505	Cloud Security Laboratory	0/0/3	3	1.5	40/60	PCC
Project Work (Internal 40 Marks & External 60 Marks)							
9	22CY506	Mini Project I	0/0/4	4	2	40/60	PW
TOTAL				28	23	900	

SEMESTER VI							
<u>S.No</u>	Course Code	Course Title	L/T/P	Contact Hrs/Wk	Credits	Ext/Int	Cat.
Theory (Internal 40 Marks & External 60 Marks)							
1	22CY602	Security Policies and its Applications	3/0/0	3	3	60/40	PCC
2	22CY603	Engineering Secure Software Systems	3/0/0	3	3	60/40	PCC
3	22XXXXX	Emerging Elective – I	3/0/0 (or)	3	3	60/40	EEC
4			2/0/2	4		50/50	EEC
5	22IT701	Computational Biology	3/0/0	3	3	60/40	ESC
Theory with Practical's (Internal 50 Marks & External 50 Marks)							
6	22CY601	Hacker Techniques Tools and Incident Handling	3/0/2	5	4	50/50	PCC
TOTAL				23	22	700	

SEMESTER VII							
<u>S.No</u>	Course Code	Course Title	L/T/P	Contact Hrs/Wk	Credits	Ext/Int	Cat.
Theory (Internal 40 Marks & External 60 Marks)							
1	22CY701	Enterprise Networking Security and Automation	3/0/0	3	3	60/40	PCC
2	22CYXXX	Professional Elective –V	3/0/0	3	3	60/40	PEC
3	22CYXXX	Professional	3/0/0	3	3	60/40	PEC

		Elective –VI					
4	22CYXXX	Open Elective – II	3/0/0	3	3	60/40	OEC
5	22CYXXX	Emerging Elective – II	3/0/0	3	3	60/40	EEC
Project Work (Internal 40 Marks & External 60 Marks)							
6	22CY702	Project Phase I	0/0/24	24	12	40/60	PW
Mandatory Course (Internal 100 Marks)							
6	22EES01	Employability Enhancement Skills	0/0/2	2	0/100	EES	
TOTAL				17	17	600	

SEMESTER VIII							
<u>S.No</u>	Course Code	Course Title	L/T/P	Contact Hrs/Wk	Credits	Ext/Int	Cat.
Theory (Internal 40 Marks & External 60 Marks)							
1	22CY801	Project Phase II	0/0/24	24	12	40/60	PW
TOTAL				24	12	100	

SCHEME OF CREDIT DISTRIBUTION – SUMMARY											
Sl. No.	Stream	Credits/Semester								C	%
		I	II	III	IV	V	VI	VII	VIII		
1	Humanities & Social Sciences Including Management (HSMC)	3	4	1						8	0.49
2	Basic Sciences (BSC)	8	8	4						20	0.12
3	Engineering Sciences (ESC)	4	4				3			11	0.06
4	Professional Core (PCC)	8	8	16	21	12	10	3		78	0.47
5	Professional Electives (PEC)					6	6	6		18	0.11
6	Open/Emerging/Industry (OEC)					3		3		6	0.03
7.	Emerging Elective Courses (EEC)						3	3		6	0.03
8.	Project Work (PROJ)					2		3	12	17	0.08
9.	Employability Enhancement Courses (EES)							2		2	0.01
10.	Mandatory Course (MC) / Spoken Hindi									Non credit	
Total		23	24	21	21	23	22	17	12	166	

STRUCTURE FOR UNDERGRADUATE ENGINEERING PROGRAM			
S. No.	Course Work - Subject Area	AICTE Suggested Credits	SKCET Credits (XXX)
1.	Humanities and Social Sciences (HS), including Management;	16	8
2.	Basic Sciences (BS) including Mathematics, Physics, Chemistry, Biology;	23	20
3.	Engineering Sciences (ES), including Materials, Workshop, Drawing, Basics of Electrical/Electronics/Mechanical/Computer Engineering, Instrumentation;	29	11
4.	Professional Subjects-Core (PC), relevant to the chosen specialization/branch; (May be split into Hard (no choice) and Soft (with choice), if required	59	78
5.	Professional Subjects – Electives (PE), relevant to the chosen specialization/ branch;	12	18
6.	Open Subjects- Electives (OE), from other technical and/or emerging subject areas;	9	6
7.	Emerging Elective Courses (EEC)	-	6
8	Project Work, Seminar and/or Internship in Industry or elsewhere.	15	17
9.	Employability Enhancement Courses (EES)	-	2
10.	Mandatory Courses (MC)	Non-credit	Non-credit
Total		163	166
<i>*Minor Variations is allowed as per need of the respective disciplines</i>			

HUMANITIES & SOCIAL SCIENCES INCLUDING MANAGEMENT (8 Credits)

SL. No.	Course Code	Course Title	L/T/P	Contact hrs./Wk.	C	Ext/ Int	Cat.
1.	22EN101	Technical Communication Skills	2/0/2	4	3	50/50	HSMC
2.	22GE201	Universal Human Values	3/0/0	3	3	60/40	HSMC
3.	22TA101	Heritage of Tamils	1/0/0	1	1	60/40	HSMC
4.	22TA201	Tamils and Technology	1/0/0	1	1	60/40	HSMC

BASIC SCIENCE COURSES (7 Credits)

SL. No.	Course Code	Course Title	L/T/P	Contact hrs./Wk.	C	Ext/ Int	Cat.
1.	22MA103	Linear Algebra and Calculus	3/1/0	4	4	60/40	BSC
2.	22CH101	Engineering Chemistry	3/0/2	5	4	50/50	BSC
3.	22MA203	Mathematical Foundations of Computer Science	3/1/0	4	4	60/40	BSC
4.	22PH201	Physics	3/0/2	5	4	50/50	BSC
5.	22MA302	Random variable and Statistics	3/1/0	4	4	60/40	BSC

ENGINEERING SCIENCE COURSES (11 Credits)

SL. No.	Course Code	Course Title	L/T/P	Contact hrs./Wk.	C	Ext/ Int	Cat.
1.	22EE111	Basics of Electrical and Electronics Engineering	2/1/0	3	3	60/40	ESC
2.	22AD201	Java Programming	3/0/2	5	4	50/50	ESC
3.	22EE114	Basics of Electrical and Electronics Engineering Laboratory	0/0/2	2	1	40/60	ESC
4.	22IT701	Computational Biology	3/0/0	3	3	60/40	ESC

PROFESSIONAL CORE COURSES (78 Credits)							
SL. No.	Course Code	Course Title	L/T/P	Contact hrs./Wk.	C	Ext/Int	Cat.
1.	22IT101	Application Development Practices	3/0/2	5	4	50/50	PCC
2.	22CS101	Problem Solving using C++	3/0/2	5	4	50/50	PCC
3.	22CS201	Data Structures and Algorithms	3/0/2	5	4	50/50	PCC
4.	22IT201	Database Management Systems	3/0/2	5	4	50/50	PCC
5.	22CS301	Advanced Java Programming	1/0/4	5	3	50/50	PCC
6.	22AD301	Design and analysis of algorithms	1/0/4	5	3	50/50	PCC
7.	22CS403	Operating Systems	3/0/2	5	4	50/50	PCC
8.	22CS402	Web Frameworks	1/0/4	5	3	50/50	PCC
9.	22AD401	Cloud Computing	1/0/4	5	3	50/50	PCC
10.	22IT402	Software Testing	1/0/4	5	3	50/50	PCC
11.	22CY402	Access Control and Identity management	3/0/2	5	4	50/50	PCC
12.	22CY403	Auditing IT Infrastructure for Compliance	3/0/2	5	4	50/50	PCC
13.	22CY401	Ethical Hacking	3/1/0	4	4	60/40	PCC
14.	22CY501	Internet Security	3/0/0	3	3	60/40	PCC
15.	22CY502	Cloud Security	3/0/0	3	3	60/40	PCC
16.	22CY503	Python for Data Analysis	3/0/0	3	3	60/40	PCC
17.	22CY504	Python for Data Analysis Laboratory	0/0/3	3	1.5	40/60	PCC
18.	22CY505	Cloud Security Laboratory	0/0/3	3	1.5	40/60	PCC
19.	22CY601	Hacker Techniques Tools and Incident Handling	3/0/2	5	4	50/50	PCC

20.	22CY602	Security Policies and its Application	3/0/0	3	3	60/40	PCC
21.	22CY603	Engineering Secure Software Systems	3/0/0	3	3	60/40	PCC
22.	22CY701	Enterprise Networking Security and Automation	3/0/0	3	3	60/40	PCC

PROFESSIONAL ELECTIVE COURSES (18 Credits)

S. No.	Course Code	Course Title	L/T/P	Contact hrs./Wk.	C	Ext/Int	Cat.
ELECTIVE STREAM I – CLOUD COMPUTING & DATA STORAGE TECHNOLOGIES							
1	22CD901	Data Virtualization	3/0/0	3	3	60/40	PEC
2	22IT901	Cloud Services and Integration	3/0/0	3	3	60/40	PEC
3	22CY901	Security and Privacy in Cloud	3/0/0	3	3	60/40	PEC
4	22AD902	Storage Technologies	3/0/0	3	3	60/40	PEC
5	22CS901	Software Defined Networks	3/0/0	3	3	60/40	PEC
6	22CB901	Stream Processing	3/0/0	3	3	60/40	PEC
7	22CD903	Multimedia and Animation	3/0/0	3	3	60/40	PEC
ELECTIVE STREAM II - APPLIED ARTIFICIAL INTELLIGENCE							
1	22IT911	Intelligent Multiagent and Expert Systems	3/0/0	3	3	60/40	PEC
2	22AD901	App Development	0/0/6	6	3	40/60	PEC
3	22CY911	ETL Tools	3/0/0	3	3	60/40	PEC
4	22CS911	Statistical Pattern Recognition	3/0/0	3	3	60/40	PEC
5	22CD911	Stochastic and Network Control	3/0/0	3	3	60/40	PEC
6	22AD911	Bayesian Data Analysis	3/0/0	3	3	60/40	PEC
7	22AD917	Virtual Reality and Augmented Reality	3/0/0	3	3	60/40	PEC

ELECTIVE STREAM III - INFORMATION SECURITY							
1	22IT921	Cyber Threats and Vulnerabilities	3/0/0	3	3	60/40	PEC
2	22IT923	Cyber Physical Systems	3/0/0	3	3	60/40	PEC
3	22IT924	Ethical Hacking and Auditing Frameworks	3/0/0	3	3	60/40	PEC
4	22CY921	Data Privacy and Security	3/0/0	3	3	60/40	PEC
5	22CY944	Cyber Crime and Forensics	3/0/0	3	3	60/40	PEC
6	22CY922	Digital and Mobile Forensics	3/0/0	3	3	60/40	PEC
ELECTIVE STREAM IV – DATA ANALYTICS							
1	22IT931	NLP in Analytics	3/0/0	3	3	60/40	PEC
2	22IT903	Deep Learning Techniques	3/0/0	3	3	60/40	PEC
3	22IT932	Cognitive Systems and Analytics	3/0/0	3	3	60/40	PEC
4	22CS931	Big Data Analytics	3/0/0	3	3	60/40	PEC
5	22CD931	Social Network Analysis	3/0/0	3	3	60/40	PEC
6	22CY931	Exploratory Data analytics	3/0/0	3	3	60/40	PEC
7	22CS902	Data Science with Python	3/0/0	3	3	60/40	PEC
8	22IT922	Data Mining	3/0/0	3	3	60/40	PEC
ELECTIVE STREAM V – IOT AND SMART CITIES							
1	22CS941	IOT Architecture and Framework	3/0/0	3	3	60/40	PEC
2	22CS942	Communication Protocols for IOT	3/0/0	3	3	60/40	PEC
3	22CS943	Cloud Services for IOT	3/0/0	3	3	60/40	PEC
4	22CS944	IoT for Healthcare	3/0/0	3	3	60/40	PEC
5	22CS945	Intelligent Transport Systems	3/0/0	3	3	60/40	PEC

6	22CS946	IOT for Smart Cities and Buildings	3/0/0	3	3	60/40	PEC
7	22CS947	Industrial IOT	3/0/0	3	3	60/40	PEC
8	22CS948	IOT for Smart Grids	3/0/0	3	3	60/40	PEC
9	22CS949	Big Data Analytics for IOT	3/0/0	3	3	60/40	PEC
ELECTIVE STREAM VI – MACHINE LEARNING							
1	22CS951	Computer Vision	3/0/0	3	3	60/40	PEC
2	22CS952	Feature Engineering	3/0/0	3	3	60/40	PEC
3	22CS953	Deep Neural Networks	3/0/0	3	3	60/40	PEC
4	22CS954	Optimization Techniques	3/0/0	3	3	60/40	PEC
5	22CS955	Advanced Learning Algorithm	3/0/0	3	3	60/40	PEC
6	22CS956	Scalable Machine Learning	3/0/0	3	3	60/40	PEC
7	22CS957	Mathematics for Machine Learning	3/0/0	3	3	60/40	PEC
8	22CS958	Generative Adversarial network	3/0/0	3	3	60/40	PEC
9	22CS959	Deep Learning Frameworks	3/0/0	3	3	60/40	PEC

OPEN/ EMERGING/ INDUSTRY (6 Credits)							
SL. No.	Course Code	Course Title	L/T/P	Contact hrs./Wk.	C	Ext/ Int	Cat.
Open Elective Course - I							
1.	22CY001	Cyber Security Fundamentals	3/0/0	3	3	60/40	OEC
2.	22CY002	Cryptography – Tools and Techniques	3/0/0	3	3	60/40	OEC
3.	22CY003	Cybersecurity Auditing and Assurance	3/0/0	3	3	60/40	OEC
Open Elective Course - II							

4.	22CY004	Web Security	3/0/0	3	3	60/40	OEC
5.	22CY005	Operating System Security	3/0/0	3	3	60/40	OEC
6.	22CY006	Security Governance, Risk, and compliance	3/0/0	3	3	60/40	OEC

EMERGING ELECTIVE COURSES							
Emerging Elective Course - I							
S No.	Course Code	Course Title	L/T/P	Contact hrs./Wk.	C	Ext/Int	Cat.
1	22CY007	Application Security	3/0/0	3	3	60/40	EEC
2	22CY008	Dependable Computing	3/0/0	3	3	60/40	EEC
3	22CY009	Security and Privacy of Cyber Physical Systems	3/0/0	3	3	60/40	EEC
4	22IT013	IT Infrastructure and Support	3/0/0	3	3	60/40	EEC
Emerging Elective Course - II							
4	22CY010	LDAP Directory Services	3/0/0	3	3	60/40	EEC
5	22CY011	Proactive Security Tools and Techniques	3/0/0	3	3	60/40	EEC
6	22CY012	Jenkins and Kubernetes	3/0/0	3	3	60/40	EEC

PROFESSIONAL ELECTIVE COURSES: VERTICALS					
Vertical I - CLOUD COMPUTING & DATA STORAGE TECHNOLOGIES	Vertical II - APPLIED AI	Vertical III - INFORMATION SECURITY	Vertical IV - DATA ANALYTICS	Vertical V – IOT AND SMART CITY	Vertical VI – MACHINE LEARNING
Data Virtualization	Intelligent Multiagent and Expert Systems	Cyber Threats and Vulnerabilities	NLP in Analytics	IOT Architecture and Framework	Computer Vision
Cloud Services and Integration	App Development	Cyber Physical Systems	Deep Learning Techniques	Communication Protocols for IOT	Feature Engineering
Security and Privacy in Cloud	ETL Tools	Ethical Hacking and Auditing Frameworks	Cognitive Systems and Analytics	Cloud Services for IOT	Deep Neural Networks
Storage Technologies	Statistical Pattern Recognition	Data Privacy and Security	Big Data Analytics	IoT for Healthcare	Optimization Techniques
Software Defined Networks	Stochastic and Network Control	Cyber Crime and Forensics	Social Network Analysis	Intelligent Transport Systems	Advanced Learning Algorithm
Stream Processing	Bayesian Data Analysis	Digital and Mobile Forensics	Exploratory Data analytics	IOT for Smart Cities and Buildings	Scalable Machine Learning
Multimedia and Animation	Virtual Reality and Augmented Reality		Data Science with Python	Industrial IOT	Mathematics for Machine Learning
			Data Mining	IOT for Smart Grids	Generative Adversarial network
				Big Data Analytics for IOT	Deep Learning Frameworks

VALUE ADDED COURSES (Based on student's interest)			
S. No	Course Code	Course Title	Sem
1.	22VA140	Kali Linux	3
2.	22VA141	Wireshark	5
3.	22VA130	Effective Communication Skills	2

MANDATORY COURSES (Non-Credits) (Courses conducted either by internal faculty or through MOOCs)							
SL. No.	Course Code	Course Title	L/T/P	Contact hrs./Wk.	C	Ext/Int	Cat.
1.	22MC101	Induction Programme		NO CREDITS			MC
2.	22MC102	Environmental Sciences		NO CREDITS			MC
3.	22MC103	Soft Skills		NO CREDITS			MC
4.	22MC104	Management Organizational Behaviour		NO CREDITS			MC
5.	22MC105	General Aptitude		NO CREDITS			MC
6.	22MC106	Life Skills and Ethics		NO CREDITS			MC
7.	22MC107	Stress Management		NO CREDITS			MC
8.	22MC108	Constitution of India		NO CREDITS			MC
9.	22MC109	Essence of Indian Traditional Knowledge		NO CREDITS			MC

L: Lecture **T:** Tutorial **P:** Practical **C:** Credit **O:** Outside Class hours **Cat.:** Category

HSMC : Humanities and Social Sciences including Management	OEC : Open and Emerging Elective Courses
BSC : Basic Science Courses	PRJ : Project Work
ESC : Engineering Science Courses	INT : Internship
PCC : Professional Core Courses	MC : Mandatory Course
PEC : Professional Elective Courses	

Definition of Credit:

L – Lecture	1 Hr. Lecture (L) per week	1 credit
T – Tutorial	1 Hr. Tutorial (T) per week	1 credit
P - Practical/Practice (Project and Industry based Courses)	1 Hr. Practical (P) per week	0.5 credit

SEMESTER – I

22MA103	LINEAR ALGEBRA AND CALCULUS		3/1/0/4
Nature of Course:	B (100% Analytical)		
Pre requisites:	Nil		
Course Objectives:			
1.	To define a subspace of a vector space and to discuss the existence of a basis of an abstract vector space.		
2.	To determine a basis and the dimension of a finite-dimensional space.		
3.	To develop the skill to use matrix algebra techniques that are needed by engineers for practical applications.		
4.	To familiarize with functions of several variables applicable in many branches of engineering.		
5.	To develop logical thinking and analytical skills in evaluating multiple integrals.		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C103.1	Understand the basic concepts of vector space, subspace, basis matrices, differentiation and integration.		[U]
C103.2	Determine the relation between matrices and linear transformations, differentiate and integration of two variables		[R]
C103.3	Apply the concepts of vector space and its properties to solve engineering problems.		[AP]
C103.4	Expressing matrices in diagonal form and also using numerical techniques to find its eigenvalues, eigenvectors and inverse.		[AP]
C103.5	Apply the knowledge of ordinary and partial derivatives to solve the engineering problems. Also determine the area and volume by applying the techniques of double and triple integrals.		[AP]
Course Contents:			
MODULE I LINEAR ALGEBRA 20 System of Linear Equations - Vector spaces – Subspaces – Linear independence – Basis – Dimensions – Inner products – Orthogonality – Gram Schmidt Process – QR decomposition – Gauss-Elimination method – Gauss-Jordan method – Iterative methods of Gauss-Jacobi and Gauss-Seidel (concepts and problems only)			
MODULE II MATRICES 20 Definition – Types of matrices – Characteristic equation – Eigenvalues and eigenvectors of a real matrices and their properties (excluding proof) – Cayley-Hamilton theorem (statement only) – Verification and application to find inverse and powers of real matrices –Orthogonal transformation of a real symmetric matrix to diagonal form – Reduction of quadratic form to canonical form by Orthogonal transformation – Inversion by Gauss-Jordan method – Eigenvalue of a matrix by Power method and Jacobi method			
MODULE III CALCULUS 20 Concepts of limits and continuity – Functions of several variables – Total derivatives – Differentiation of implicit functions – Jacobians - maxima and minima of functions of two variables – Definite integrals: Evaluation of definite integrals using Bernoulli's formula – Multiple Integrals: Double integration in Cartesian coordinates –Change of order of Integration – Area as double integral – Triple integration in Cartesian coordinates – Volume as triple integral.			
TOTAL PERIODS 60

22EE111	BASICS OF ELECTRICAL AND ELECTRONICS ENGINEERING		2/1/0/3
Nature of Course:	G (Theory analytical)		
Pre requisites:	Nil		
Course Objectives:			
1.	To impart the students with a basic understanding of Electrical circuits.		
2.	To learn the working principle of transformers.		
3.	To understand the Electrical Machines working principles and to have a knowledge on selection of machine for specific types of applications.		
4.	To equip the students with an ability to understand basics of electronics devices.		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C111.1	Analyze the concepts in AC circuit and DC circuits.		[A]
C111.2	Examine the working principle of single phase transformer.		[A]
C111.3	Realize the fundamental concepts of magnetic circuits		[U]
C111.4	Understand the working principle of DC and AC machines.		[AP]
C111.5	Interpret the basic devices in Electronics.		[U]
Course Contents:			
MODULE I DC CIRCUITS AND AC CIRCUITS 15 DC Circuits - Electrical circuit elements (R, L and C) - Voltage and Current Sources - Kirchoff's current and voltage law - analysis of simple circuits with dc excitation - Mesh and Nodal Analysis. AC Circuits - Representation of sinusoidal waveforms, Peak and RMS values, Phasor representation, Real power, Reactive power, Apparent power, Power factor. Analysis of single phase ac circuits consisting of R, L, C, RL and RC. Three phase balanced circuits - Voltage and Current relations in star and delta connections.			
MODULE II MAGNETIC CIRCUITS AND ELECTRICAL MACHINES 15 Magnetic Circuits - Definitions - MMF, Flux, Reluctance, Magnetic Field Intensity, Flux Density, Fringing, Self and Mutual Inductances, Static machines: BH characteristics, Construction and working principle of single phase and three phase transformers. Rotating machines: Generation of rotating magnetic fields, Construction and working principle of DC machines, Three-phase induction motor and Synchronous motor.			
MODULE III BASICS OF ELECTRONICS AND APPLICATIONS 15 Semiconductor - PN junction diode - Zener diode - Rectifier - Half wave, Full wave and Bridge rectifier - Bipolar Junction Transistor Introduction - Common base, Common emitter and Common collector configuration - Field Effect Transistor Introduction - Construction and characteristics of JFETs - MOSFET - Depletion type MOSFET, Enhancement type MOSFET, Transfer characteristics.			
TOTAL PERIODS 45			
Text Books:

22IT101	APPLICATION DEVELOPMENT PRACTICES		3/0/2/4
Nature of Course:	F (Theory programming)		
Pre requisites:	Nil		
Course Objectives:			
1.	To discuss the essence of agile development methods.		
2.	Ability to understand and apply Scrum framework.		
3.	To set up and create a GitHub repository.		
4.	To impart the knowledge of web application development platforms.		
5.	To create interactive websites using HTML, CSS.		
6.	To recognize the user experience design methodologies like Java script for responsive web design.		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C101.1	Identify the driving forces and adopt Agile approaches to software development practices.	[AP]	
C101.2	Demonstrate the values and practices of Scrum and how to setup the GitHub repository.	[U]	
C101.3	Find the working model and learn basic web concepts to develop Static and Dynamic web pages.	[R]	
C101.4	Utilize the Knowledge of HTML and CSS code to create personal and/or business websites following current professional and/or industry standards.	[AP]	
C101.5	Develop dynamic web page with validation and event handling mechanisms.	[AP]	
Course Contents:			
MODULE I15 History-Software Development Model, SDLC-Waterfall Model-Advantages- Disadvantages, Agile Software Development – Definition, Agile Development Model- Graphical Illustration-Uses-Agile Manifesto and Principles- Methods, Agile Values, Foundation-Characteristics of Agile Methods-Agile Methods and Practices, Agile Model- Advantages-Disadvantages-Difference between Agile and Waterfall Model, Agile – Myths and Reality, Agile Market Insight. SCRUM- Introduction, Roles, Responsibilities, Scrum Core Practices and Artifacts, User Story, Sprint, Release – Types of Meeting, Retrospective-Backlog, Burn-Down Chart, Velocity, Impediment Backlog- Splitting User Story into Task - Guidelines for Breaking Down - Examples of Scrum Task Board, Types of Poker- Process/Steps, Story Points -Definition, Estimate in Story Points, Extreme Programming(XP)- Introduction-Rules of Extreme Programming-Principles-Key Terms, Lean Software Development- Introduction- Principles, Kanban- Introduction to Git - Recording Changes-Viewing the Commit History-Undoing Things, Working with Remotes, Tagging, Git- Aliases Branching-Nutshell, Basic Branching and Merging, Branch Management, Remote Branches, Rebasing. GitHub – Introduction, set up, repository creation, GitHub Flow, Contribution to Projects, Communicating on GitHub. Linux Basic Commands - Linux Basic Commands, Permissions, Basic System Administration, Process Management, Archival. Linux Shell Script - Basics, Conditional statements, Loops, Command line arguments, Functions & file manipulations, Background processes, Scheduling processes -At, batch & Cron -Networking. MODULE II15 HTML Basics - HTML 5 - Semantic Elements - Physical/logical character effects- Document spacing. Tables - cell spanning, cell spacing, border. List - Numbered List, Bulleted List, Links - working of hyperlinks in web pages,list items, table contents - Image Handling – Frames. HTML Forms - HTML elements -Single line text field, Text area, Check box, Radio buttons, Password fields, Pull-down menus, File selector dialog box New Form Elements - Audio, video, article tags.			

MODULE III**15**

Cascading Style Sheets- Introduction - CSS Syntax, Types of CSS - Text Formatting, Text Effects, Fonts CSS Selectors - Type Selector, Universal Selector, ID Selector, Class selector Colors and Borders – Background, Multiple Background, Colors RGB and RGBA, HSL and HSLA, Borders, Rounded Corners, Applying Shadows in border, CSS3– Modernizer, HTML5 Shims, SASS, and Other CSS Preprocessors, CSS Grid Systems, CSS Frameworks. Bootstrap – Introduction, Basics, grid system, Basic Components, Page Header, Breadcrumb, Button Groups, Dropdown, Nav & Navbars JavaScript Essentials - Var, Let and Const keyword, Arrow functions, default arguments, Template Strings, String methods, Object de-structuring, Create, apply, prototype, bind method, Spread and Rest operator, Typescript Fundamentals, Types & type assertions, custom object types, function types, Typescript.OOPS - Classes, Interfaces, Constructor, Decorator & Spread Operator, Equality Operator. Asynchronous Programming in ES6, Promise Constructor, Promise with Chain, Promise Race.

TOTAL PERIODS(Theory) 45**LIST OF EXPERIMENTS:**

1. Draw basic UML diagrams (use case, Activity, class, interaction, State charts, Component and Deployment diagram)
2. Develop DFD model (level-0, level-1)
3. Design a web page using HTML basic tags.
4. Develop web site with suitable contents and links.
5. Design web pages using lists and tables.
6. Build a web client-side Login, Registration form and Dashboard with drop down menus.
7. Develop a HTML form and validation using HTML5 features.
8. Create a website using HTML: To embed an image map in a web page. To fix the hot spots. Show all the related information when the hot spots are clicked.
9. Apply style specification in HTML page using CSS.
10. Develop dynamic web application using HTML, CSS and JavaScript.

22CS101	PROBLEM SOLVING USING C++		3/0/2/4
Nature of Course:	C(Theory Concept), K (Problem Programming)		
Pre requisites:	Nil		
Course Objectives:			
1.	To learn the fundamental programming concepts and methodologies which are essential to build good C++ programs.		
2.	To gain knowledge on control structures and functions in C++		
3.	To provide the basic object-oriented programming concepts and apply them in problem solving.		
4.	To introduce file streams and operations for storing data permanently.		
5.	To know generic programming paradigm		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C101.1	Solve problems using operators and control Statements		[AP]
C101.2	Write C++ programs for processing strings and arrays .		[AP]
C101.3	Apply the concepts of pointers and functions in programs.		[AP]
C101.4	Develop C++ programs using various object-oriented concepts to solve real world problems.		[A]
C101.5	Implement the concepts on file streams and operations		[AP]
Course Contents:			
MODULE I C++ PROGRAMMING FUNDAMENTALS 15 Constant. Operators: Arithmetic Operators, Assignment Operators, Relational Operators, Logical Operators, Bitwise Operators, Other Operators, Operator Precedence. Control Statements: if, if...else and Nested if...else, switch case, break and continue, Loops - for loop, while loop, do while loop, goto. Arrays and Strings 1D array, 2D array, Strings, String functions. Function: Basics, call by value, call by reference & return by reference, Inline function, overloading Functions, inline Functions, Recursive Functions. Pointers: Pointer, Dynamic Memory Allocation.			
MODULE II OBJECT ORIENTED CONCEPTS 15 Classes and Objects, public, private, protected. Constructors and destructors: Overloaded Constructor, Copy Constructor, Shallow Copying Deep Copying. Overloading: this' Pointer, structs vs Classes, Friends of a class, Operator Overloading Inheritance, Overloading vs overriding, Polymorphism, Virtual Functions, Pure Virtual Functions and Abstract Classes.			
MODULE III FILES AND GENERIC PROGRAMMING 15 Abstract Classes as Interfaces, Exception, Files, Streams and I/O, STL, Generic Programming, Lambda Expression.			
TOTAL PERIODS(Theory) 45			
LIST OF EXPERIMENTS:			
1. Practice of C Programming using Branching and Iterative constructs. 2. Programs using arrays and strings 3. Programs using Functions 4. Programs using Structures and Pointers. 5. Programs using classes and objects 6. Programs using constructor and destructor			

7. Programs using method overloading, operator overloading and polymorphism concepts.
8. Programs using friend class
9. Programs using virtual functions and abstract class.
10. Programs using inheritance concepts
11. Programs using exception handling concept
12. Programs using Files.
13. Mini project

22CH101	ENGINEERING CHEMISTRY	3/0/2/4
Nature of Course:	E (Theory Skill based)	
Pre requisites:	Nil	
Course Objectives:		
1.	To understand the principles and applications of electrochemistry and to learn electroanalytical methods.	
2.	To learn the effect of corrosion in materials and the methods for prevention of corrosion.	
3.	To understand the basic concepts, synthesis, and applications of nanomaterials.	
4.	To explore the synthesis and properties of important engineering plastics and energy sources.	
5.	To understand the concepts of photophysical and photochemical processes in spectroscopy.	
Course Outcomes		
Upon completion of the course, students shall have ability to		
C101.1	Apply the various corrosion control techniques in real time industrial environments.	[AP]
C101.2	Understand the principle and working of reference electrodes and conductivity meters as an Analyzer.	[R]
C101.3	Understand the basic concepts and applications of Nanochemistry.	[U]
C101.4	Use the knowledge of polymers, various energy sources and storage devices in engineering field.	[AP]
C101.5	Understand the principle and working of certain analytical techniques.	[U]
Course Contents:		
MODULE I ELECTROCHEMISTRY AND CORROSION 15		
Electrochemistry-Introduction, Oxidation and reduction potentials-Free energy and emf, cell potentials, Nernst equation and applications. Reference electrodes-standard hydrogen electrode, saturated calomel electrode, glass electrode-pH measurement. Electrochemical cells-electrolytic cell-reversible and irreversible cells. Water treatment-characteristics of water-hardness-types and estimation of hardness by EDTA method with numerical problems. Importance of corrosion-types-mechanism of dry and wet corrosion-galvanic corrosion-differential aeration corrosion. Corrosion protection-electroplating of Chromium-electroless plating of Nickel.		
MODULE II NANO-CHEMISTRY AND ENERGY SOURCES 15		
Nano Chemistry-Basics-Comparison of molecules, nanomaterials and bulk materials; Types –nanoparticle, nanocluster, nanorod, nanowire and nanotube. Preparation of nanomaterials: Electrochemical deposition and electro spinning. Applications of nanomaterials in medicine. Energy Sources-Fuel Cells-Solid oxide and polymer electrolytes in H ₂ -O ₂ fuel cell. Storage Devices-Batteries- Alkaline-Lead acid, Nickel cadmium and Lithium-ion batteries.		
MODULE III POLYMER CHEMISTRY AND SPECTROSCOPIC TECHNIQUES 15		
Introduction-monomers and polymers-classification of polymers-Degree of Polymerization (Simple problems). Mechanism of addition polymerization (free radical mechanism). Plastics-classification-preparation, properties and uses of Nylon 6,6, Nylon 6, PVC, Bakelite and PET. Moulding methods-moulding of plastics for Car parts, bottle caps (Injection moulding), Pipes, Hoses (Extrusion moulding), Mobile Phone Cases, Battery Trays (Compression moulding) and PET bottles (Blow moulding). Spectroscopy-Beer Lambert's law, principle, instrumentation, and applications of Electronic spectroscopy (UV-visible), Vibrational and rotational spectroscopy (IR) and Flame emission spectroscopy (FES).		
TOTAL PERIODS(Theory) 45		
LIST OF EXPERIMENTS:		

1. Determination of total, temporary, calcium and magnesium hardness of water sample by EDTA method.
2. Estimation of alkalinity of water sample.
3. Estimation of dissolved oxygen in water
4. Potentiometry- determination of redox potentials and emf's
5. Conductometric titration-mixture of acids vs NaOH
6. Determination of strength of strong acid by pH metry
7. Determination of corrosion rate of mild steel in acid medium
8. Electroplating of nickel over copper
9. Spectrophotometry-Estimation of iron in water
10. Determination of single electrode potential of Zinc and Copper by given solution
11. Anodizing of Aluminium using Electrolysis process.
12. Synthesis of Nylon 66
13. To detect the chlorine content in tap water using simple chemical method
14. To know the presence of dissolved oxygen in given water sample using glucose by redox principle
15. To illustrate the rate of corrosion in steel nails using acid medium

22EN101	TECHNICAL COMMUNICATION SKILLS	2/0/2/3
Nature of Course:	Theory Skill Based	
Pre requisites:	Basics of English Language	
Course Objectives:		
1.	To enhance learners" LSRW skills.	
2.	To develop students" ability to understand the process of communicating and interpreting ideas and human experiences.	
3.	To facilitate learners to acquire effective technical writing skills.	
4.	To prepare learners for placement and competitive exams.	
5.	To facilitate effective language skills for academic purposes and real-life situations.	
Course Outcomes		
Upon completion of the course, students shall have ability to		
C101.1	Remember language skills for technical communication.	[R]
C101.2	Apply communication skills in a corporate environment.	[AP]
C101.3	Understand and communicate effectively in personal and professional situations.	[AP]
C101.4	Understand and Analyze a variety of reading strategies to foster comprehension and to construct meaningful and relevant connections to the text.	[U]
C101.5	Apply technical writing skills to write letters, emails and prepare technical documents.	[AP]
Course Contents:		
MODULE I INTRODUCTION 10 Listening to News in NDTV and Times Now Channels.Speaking: Introduction to Effective Communication - Barriers to Effective Communication- Tips to develop Communication Skills - Self Introduction - Overview of Business Communication-Short Talk on Business Topics -Impromptu Speaking (Public Speaking) - Non-Verbal Communication-SATORI-Sharing Personal Information-Reading: Reading Comprehension- Values and its Importance. Writing: SWOT Analysis -Book Review - Movie Review-Vocabulary Building.		
MODULE II LISTENING 10 Listening to Specific Information. Speaking: Speaking on Specific Information. Reading: Skimming and Scanning-Reading Short Texts - Comparing Facts and Figures - Short Stories and Scientific Articles. Writing: Good and Bad Writing- Note Making - Writing Formal Letters (Inviting, Accepting and Declining Invitations)- Writing Business Letters (Calling for Quotations, Seeking Clarifications, Placing an Order and Complaint Letter)- Transcoding (Bar chart, Flowchart. Pie chart and Table)-Job Application Letter- Resume Writing.		
MODULE III 10 Listening to Narrations and Persuasive speech and identifying narrative and persuasive techniques. Speaking: 21st Century Skills- Narrative Skills- Leadership- Conflict Resolution-Persuasive Speaking-How to Tell a Story with Charts and Graphs Reading: Product Description and Product Review. Writing: Email Writing – Advantages and Disadvantages- Circular – Agenda and Minutes of the Meeting - Proofreading- Subject Verb Agreement-Tenses-Active Voice- Passive Voice- Impersonal Passive Voice-Report Phrases – Report Writing.		
TOTAL PERIODS(Theory) 30		

LIST OF EXPERIMENTS:

1. Listening Comprehension 1. News in NDTV and Times Now Channels 2. Listening to Specific Information
2. Impromptu Speaking
3. Reading Comprehension related to Competitive Exams
4. Immersion Activity and Presentation
5. Group Discussion
6. Group Assignment – Form an NGO

22EE114	BASICS OF ELECTRICAL AND ELECTRONICS ENGINEERING LABORATORY		0/0/2/1
Nature of Course:	M (Practical application)		
Pre requisites:	Nil		
Course Objectives:			
1.	To implement the basic Electric Circuits.		
2.	To estimate the current flow and voltage across the circuit elements under different loading conditions.		
3.	To understand the basic electronic devices.		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C114.1	Illustrate the Electrical Elements and Sources in an Electric Circuit.		[U]
C114.2	Verify the current flow and voltage across the circuit elements using different analysis method.		[A]
C114.3	Measure three phase power and power factor in a single and three phase AC circuits.		[AP]
C114.4	Illustrate the working principle of residential house wiring, DC and AC machines.		[U]
C114.5	Interpret the basic devices in Electronics.		[AP]
LIST OF EXPERIMENTS:			
1. Familiarization of Electrical Elements, Sources, Measuring Devices and Verification of ohm's law.			
2. Estimation of voltage and current by KVL and KCL in Electric Circuits.			
3. Determination of mesh current by Mesh Analysis			
4. Determination of node voltage by Nodal Analysis.			
5. Estimation of Voltage and Current in star and delta connections.			
6. Measurement of three phase power and Power factor.			
7. Residential house wiring and demonstration of cut-out sections of DC Motor and Induction Motor.			
8. Determination of characteristics of MOSFET.			
9. Construction of bridge rectifier with and without filters.			
10. Draw the characteristics of Bipolar Junction Transistor.

22MC101	INDUCTION PROGRAMME		1/0/0/0
Nature of Course:	Induction Programme		
Pre requisites:	Nil		
Course Objectives:			
1.	To have broad understanding of society and relationships		
2.	To nurture the character and fulfil one"s responsibility as an engineer, a citizen and a human being.		
3.	To incorporate meta skills and values.		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C101.1	Explore academic interest and activities		[AP]
C101.2	Work for excellence		[AP]
C101.3	Promote bonding and give a broader view of life and character		[AP]
PHYSICAL ACTIVITY: Research over the past years has shown Yoga to have stress-relieving powers on students, paving the way for improved academic performance with the practice of asanas, meditation and breathing exercises. To prove these words Yoga classes has been planned in this module.			
CREATIVE ARTS (students can select any one of their choice): Cultural development supports students to understand, feel comfortable with, value and appreciate the potential enrichment of cultural diversity. They should challenge discrimination, whether based on cultural or racial difference. Students should experience cultural traditions embedded in arts, crafts, language, literature, theatre, song, music, dance, sport, Science, technology and travel. Students should develop an appreciation of beauty both in experiencing artistic expression and by exploring their own creative powers. To inculcate those skills they are given a chance to exhibit their talents through painting, sculpture, pottery, music, dance, craft making and so on.			
UNIVERSAL HUMAN VALUES: Moral development involves supporting students to make considered choices around their behaviour and the values that provide a framework for how they choose to live. Moral development is also learning about society"s values, understanding the reasons for them, how they are derived and change; and how disagreements are resolved. Students must consider the consequences of personal and societal decisions on the wider community – local and global- and on the environment and future generations. To acquire this the students are exposed to training to enhance their soft skills.			
LITERARY AND PROFICIENCY MODULES: Social development helps students to work effectively together, developing the inter-personal skills required to relate positively with their peers and people of all ages. Students must also understand how to participate productively in a diverse and plural society and learn about, and how to effectively engage with societal institutions and processes. They should understand that a person may have different roles and responsibilities within society. To reach this the following aspects are given in the form of Reading, writing, speaking – debate, role play etc. Communication and computer skills.			
LECTURES BY EMINENT PEOPLE: Teaching with Lectures It is essential to see lectures as a means of helping students learn to think about the key concepts of a particular subject, rather than primarily as a means of transferring knowledge from instructor to student. During the induction period students will attend to Guest lectures by subject experts.			
VISIT TO LOCAL AREAS: Traveling is in fact a way of learning to learn. You are out of your comfort zone and so you must learn to be able to adapt to a new learning environment in a very short time. It also helps in your overall learning as well. In the induction period students will be taken to different places near college to learn new things. Eg. Meditation centre/orphanage/Hospital.			

FAMILIARIZATION TO DEPARTMENT/BRANCH INNOVATION: Hod"s of different branches will present about their department followed by department visit to view various facilities available at their department, new innovations from students and faculties etc.

Course Outcomes (CO)	Programme Outcomes (PO)												Programme Specific Outcomes (PSO)

C101.3	-	-	-	-	-	3	3	3	3	3	3	3	-	-	1

SEMESTER – II

22EN101	UNIVERSAL HUMAN VALUES		3/0/0/3
Nature of Course:	Descriptive		
Pre requisites:	Interpersonal Communication and Value Sciences		
Course Objectives:			
1.	Development of a holistic perspective based on self-exploration about themselves (human being), family, society and nature/existence.		
2.	Understanding (or developing clarity) of the harmony in the human being ,family, society and nature/existence.		
3.	Strengthening of self-reflection.		
4.	Development of commitment and courage to act.		
5.	Helping the students to appreciate the essential complementarity between „VALUES“ and„ SKILLS“ to ensure sustained happiness and prosperity, which are the core aspirations of all human beings.		
6.	Highlighting plausible implications of such a Holistic understanding in terms of ethical human conduct, trustful and mutually fulfilling human behavior and mutually enriching interaction with Nature.		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C201.1	Understand and take responsibilities in life and handle problems to attain sustainable solutions while keeping human relationships and human nature in mind.		[U]
C201.2	Apply responsibilities towards their commitments (human values , human relationship and human society).		[AP]
C201.3	Apply what they have learnt to their own self indifferent day-to-day settings in real life, atleast a beginning would be made in this direction.		[AP]
C201.4	Analyze ethical and unethical practices, and formulate strategies to actualize a harmonious environment wherever they work.		[AN]
C201.5	Understand the harmony in nature and existence, and work out mutually on fulfilling participation in nature.		[U]
Course Contents:			
MODULE I COURSE INTRODUCTION - NEED, BASIC GUIDELINES, CONTENT AND PROCESS FOR VALUE EDUCATION, UNDERSTANDING HARMONY IN THE HUMAN BEING-HARMONY IN MYSELF! 15 Self-evaluation of the students- Pre-test of UHV- Purpose and motivation for the course. Self-Exploration–Its content and process- A look at basic Human Aspirations. Understanding Happiness and Prosperity correctly-Understanding the needs of Self(„I“) and „Body“-Understanding the Body as an instrument of „I“(being the doer, seer and enjoyer)- Understanding the characteristics and activities of „I“ and harmony in „I“ - Understanding the harmony of „I“ with the Body- Social activities – Waste Management - Water Conservation-Soil Pollution - Physical Health and related activities - Lectures by eminent persons- Literary activities.			
MODULE II UNDERSTANDING HARMONY IN THE FAMILY AND SOCIETY- HARMONY IN HUMAN-HUMAN RELATIONSHIP, UNDERSTANDING HARMONY IN THE NATURE AND EXISTENCE-WHOLE EXISTENCE AS COEXISTENCE 15 Understanding values in human relationship - Understanding the harmony in the society (society being an extension of family): - Visualizing a universal harmonious order in society-Understanding the harmony in Nature.-Understanding Existence as Coexistence of mutually Interacting units in all-pervasive space. Holistic perception of harmony at all levels of existence-Buddy program- Relationships-Homesickness- Managing peer pressure-Projects-Socially responsible engineers-Visit to local areas (orphanages, special children)- Physical activities(games).			
MODULE III IMPLICATIONS OF THE ABOVE HOLISTIC UNDERSTANDING OF 15			

HARMONY ON PROFESSIONAL ETHICS

Humanistic Constitution and Humanistic Universal Order-Competence in professional ethics-Case studies of typical holistic technologies, management models and eco-friendly production systems - Strategy for transition from the present state to Universal Human Order-Sum up: Self-evaluation of the students-Post test of UHV.

22MA203	MATHEMATICAL FOUNDATIONS OF COMPUTER SCIENCE	3/1/0/4
Nature of Course:	B(100% Analytical)	
Pre requisites:	Nil	
Course Objectives:		
1.	To study the concepts needed to test the logic of a program.	
2.	To understand the concepts of various types of relations, partial ordering and equivalence relations.	
3.	To acquire thorough knowledge of fundamental notions from lattice theory and properties of lattices.	
4.	To learn the working class of functions which transform a finite set into another finite set which relates to input and output functions in computer science.	
Course Outcomes		
Upon completion of the course, students shall have ability to		
C203.1	Recall the basic concepts of logic, Relations, Functions and Group.	[R]
C203.2	Acquire critical thinking skills by understanding the logical structure of the language.	[U]
C203.3	Use the concepts of Discrete Mathematics in software development and hardware design.	[AP]
C203.4	Analyze the basic structures of lattices.	[AP]
C203.5	Integrate ideas to find solutions to various recurrence relations.	[AP]
Course Contents:		
MODULE I PROPOSITIONAL AND PREDICATE CALCULUS		20
Propositional Calculus: Basic concepts – Propositions - Connectives– Truth tables – Tautologies and Contradictions – Contrapositive – Logical equivalences and Implications – Normal forms – Principal conjunctive and Disjunctive normal forms– Rules of inference – Validity of arguments –Predicate Calculus: Statement function – Variables – Free and bound variables – Quantifiers– Universe of discourse – Theory of inference – The rules of universal specification and generalization – Validity of arguments.		
MODULE II RELATIONS AND COUNTING		20
Relations: Types of relations and their properties– Relational matrix and graph of a relation – Equivalence relations – Partial ordering–Hasse diagram – Lattices and their properties- sub lattices – modular lattices- Distributive lattices - Recurrence relations– Solving Recurrence relations– Inclusion and Exclusion- Counting: Basics of counting– Pigeonhole Principle –Permutations and Combinations- Mathematical induction		
MODULE III FUNCTIONS AND GROUPS		20
Functions: Definitions of functions – Classification of functions–Composition of functions–Inverse function- Characteristic function of a set – Hashing functions – Recursive functions –Permutation functions. Groups: Groups–Sub group- Semigroup- Monoid - Abelian groups–sub Codes and Group Codes – Basic Notions of Error Correction – Error Recovery in Group Codes.

22TA101	HERITAGE OF TAMILS		1/0/0/1
Nature of Course:	C (Theory Concept)		
Pre requisites:	Nil		
Course Objectives:			
1.	To know various concepts of Tamil Language families.		
2.	To know about the essentialities of Heritage.		
3.	To understand the Aram concepts of Tamils and the cultural influence.		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C101.1	Know about the language families in India, impact of religions and the contribution of Bharathiyar and Bharathidhasan.		[U]
C101.2	Observe the growth of sculpture, making of musical instruments and the role of temples in socio and economic lives.		[U]
C101.3	Understand the significance of folklore and martial arts.		[U]
C101.4	Learn the sangam literature, sangam age and overseas conquest of Cholas.		[U]
C101.5	Understand the contribution of Tamils to Indian Freedom Struggle, role of Siddha medicine and print history of Tamil Books.		[U]
Course Contents:			
MODULE I LANGUAGE AND LITERATURE: 5 Language Families in India - Dravidian Languages – Tamil as a Classical Language - Classical Literature in Tamil – Secular Nature of Sangam Literature – Distributive Justice in Sangam Literature - Management Principles in Thirukural - Tamil Epics and Impact of Buddhism & Jainism in Tamil Land - Bakthi Literature Azhwars and Nayanmars - Forms of minor Poetry - Development of Modern literature in Tamil - Contribution of Bharathiyar and Bharathidhasan.			
MODULE II HERITAGE - ROCK ART PAINTINGS TO MODERN ART – SCULPTURE: 5 Hero stone to modern sculpture - Bronze icons - Tribes and their handicrafts - Art of temple car making - Massive Terracotta sculptures, Village deities, Thiruvalluvar Statue at Kanyakumari, Making of musical instruments - Mridhangam, Parai, Veenai, Yazh and Nadhaswaram - Role of Temples in Social and Economic Life of Tamils. Folk And Martial Arts: Therukoothu, Karagattam, Villu Pattu, Kaniyan Koothu, Oyillattam, Leather puppetry, Silambattam, Valari, Tiger dance - Sports and Games of Tamils.			
MODULE III THINAI CONCEPT OF TAMILS 5 Listening to Narrations and Persuasive speech and identifying narrative and persuasive techniques. Speaking: 21st Century Skills- Narrative Skills- Leadership- Conflict Resolution-Persuasive Speaking-How to Tell a Story with Charts and Graphs Reading: Product Description and Product Review. Writing: Email Writing – Advantages and Disadvantages- Circular – Agenda and Minutes of the Meeting - Proofreading- Subject Verb Agreement-Tenses-Active Voice- Passive Voice- Impersonal Passive Voice-Report Phrases – Report Writing.			
TOTAL PERIODS(Theory) 15			
Text Books:			
1.	Social Life of Tamils (Dr.K.K.Pillay) A joint publication of TNTB & ESC and RMRL – (in print)		
2.	Social Life of the Tamils - The Classical Period (Dr.S.Singaravelu) (Published by: International Institute of Tamil Studies.		

3.	Historical Heritage of the Tamils (Dr.S.V.Subatamanian, Dr.K.D. Thirunavukkarasu) (Published by: International Institute of Tamil Studies).
Reference Books:	
1.	Keeladi - „Sangam City Civilization on the banks of river Vaigai“ (Jointly Published by: Department of Archaeology & Tamil Nadu Text Book and Educational Services Corporation, Tamil Nadu).
2.	The Contributions of the Tamils to Indian Culture (Dr.M.Valarmathi) (Published by: International Institute of Tamil Studies.)
3.	Studies in the History of India with Special Reference to Tamil Nadu (Dr.K.K.Pillay) (Published by: The Author).

22CS201	DATA STRUCTURES AND ALGORITHMS		3/0/2/4
Nature of Course:	F (Theory Programming)		
Pre requisites:	Problem Solving using C++		
Course Objectives:			
1.	To introduce list data structure and its applications.		
2.	To impart the importance of stacks and queues in problem solving.		
3.	To provide knowledge on Tree and Graph data structures.		
4.	To discuss the role of hashing in information storage and retrieval.		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C201.1	Implement the basic data structures like array and LinkedList.		[AP]
C201.2	Solve real world problems efficiently by applying stack and queue data structures.		[AP]
C201.3	Illustrate the applications of tree data structures.		[AP]
C201.4	Discuss the importance of hashing techniques in information storage.		[AP]
C201.5	Employ graph algorithms for solving real time computing problems and analyze them.		[A]
Course Contents:			
MODULE I LINKED LIST & STACK 15 Linked List: Array vs Linked list - Types of linked list - Singly, Doubly and Circular Linked list - Applications of linked list. Stack: Stack Model, Array and Linked list implementation of Stack –Applications of Stack - Infix Prefix and Postfix expressions - infix to postfix conversion - Expression Evaluation- Balancing Parenthesis.			
MODULE II QUEUE AND TREES 15 Queue: Queue Model, Array and Linked list implementation of Queue-Priority Queue - Applications of Queue. Trees: Binary Tree - Binary Search Tree - Insertion, Deletion, Traversal - Inorder, Preorder, Postorder, Level order traversal.			
MODULE III GRAPHS AND HASHING 15 Graphs: Weighted and Directed graphs - Adjacency matrix and list implementation - Traversal – Breadth First Search & Depth First Search. Hashing: Direct Address Table, Hash function, Collision resolution techniques, Linear Probing, quadratic probing, double hashing.			
TOTAL PERIODS(Theory) 45			
LIST OF EXPERIMENTS:			
1. Implementation of Singly, Doubly and Circular Linked List. 2. Implementation of Stack using Arrays. 3. Implementation of Stack using Linked List. 4. Implementation of Stack applications 5. Implementation of Queue using Arrays. 6. Implementation of Queue using Linked List. 7. Implementation of Queue applications. 8. Implementation of Hashing techniques 9. Implementation of Binary Search Tree. 10. Implementation of Graph Traversal algorithms

22IT201	DATABASE MANAGEMENT SYSTEMS		3/0/2/4
Nature of Course:	D (Theory Application)		
Pre requisites:	Nil		
Course Objectives:			
1.	To describe information and data models and relational databases.		
2.	To explain an Entity Relationship Diagram and design a relational database for a specific use case.		
3.	To implement different relational model constraints.		
4.	To manage database using SQL commands		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C201.1	Conceptualize data using the relational model.		[U]
C201.2	Improve the database design through normalization.		[U]
C201.3	Manipulate a database using SQL.		[AP]
C201.4	Implement advanced SQL concepts on database.		[AP]
C201.5	Infer the transactions management in a database environment.		[A]
Course Contents:			
MODULE I INTRODUCTION		15	
Introduction to DBMS, Characteristics of DBMS, DBMS vs File Systems, need for DBMS, Three Level DBMS Architecture, Data Models – Introduction, Benefits, and Phases, ER Diagrams – Symbols, Components Relationships, Weak entities, Attributes, Cardinality, Relational Algebra, Domain Relational Calculus, Tuple Relational Calculus, Normalization - 1NF, 2NF, 3NF, BCNF, 4NF			
MODULE II CONSTRAINTS AND SQL COMMANDS		15	
DDL Commands - Create, Drop, Alter, Truncate, Rename, Keys - primary Key, Foreign Key DML Commands - Select, Insert, Update, Delete, Any, All, In, Exists, Non Exists, Union, Intersection, Subqueries - nested correlated, Joins- Inner, Outer, and Equi, Functions - SUM, COUNT, AVG, MIN, MAX, Clauses - Group By Having By, Embedded SQL, Dynamic SQL, Transaction Concepts – Transaction model – ACID Properties - Serializability –Transactions as SQL statements.			
MODULE III QUERIES AND TRANSACTIONS		15	
Creation and Dropping of Views, Creation and Execution of Stored Procedures Cursors and Triggers - Opening, Fetching and Closing, Creation , Insertion, Deletion and Updating Database Applications: Payroll Processing Systems, Railway Reservation Systems, Bank Management System Introduction, Storage media and file structures, B+ Tree Hashing – static and Dynamic, Introduction to Query Processing – Issues in query optimization – Steps in query processing, Concurrency control and transactions, Lock based protocols Recovery System – Failure classification.			
		TOTAL PERIODS(Theory) 45	
LIST OF EXPERIMENTS:			
1. Conceptual Database design using E-R DIAGRAM			
2. Implementation of SQL commands DDL, DML, DCL and TCL			
3. Queries to demonstrate implementation of Integrity Constraints			
4. Practice of Inbuilt functions			

5. Implementation of Join and Nested Queries AND Set operators
6. Implementation of virtual tables using Views
7. Practice of Procedural extensions (Procedure, Function, Cursors, Triggers)
8. Document Database creation using MongoDB
9. Study of Cloud Storage
10. Mini Project (Application Development) i) IT Training Group Database ii) Blood Donation System
iii) Salary Management System iv) Traffic Light Information System

TOTAL PERIODS (LAB) 30

22AD201	JAVA PROGRAMMING	3/0/2/4
Nature of Course:	F (Theory Programming)	
Pre requisites:	Nil	
Course Objectives:		
1.	To understand the basic concepts of core java.	
2.	To employ different types of modifiers and Control statements	
3.	To implement and interpret Arrays and Strings concepts	
4.	To implement streams and java console formatting features	
Course Outcomes		
Upon completion of the course, students shall have ability to		
C201.1	Infer the basic concepts of java programming.	[U]
C201.2	Illustrate the usage of different aspects of Controls statements in real world scenarios.	[AP]
C201.3	Apply Array and strings in real time environment.	[AP]
C201.4	Analyze and Interpret StringBuffer and StringBuilder Classes	[A]
C201.5	Utilize the functionalities of streams and java console class.	[AP]
Course Contents:		
MODULE I INTRODUCTION TO JAVA 15 Introduction to Java: Java Architecture- JVM, JRE & JDK, Keywords, Features of Java, Console input and output statements, variables and Identifiers, Scope of Variables, Data types, Type Conversion, Comments, Command Line Arguments, Access Modifiers Operators - Unary Operator- Arithmetic Operator- Shift Operator - Relational Operator - Bitwise Operator - Logical Operator - Ternary Operator and Assignment Operator. Decision Statements - if Statements, if-else Branching, switch Statements.		
MODULE II LOOPS, ARRAY & STRINGS 15 Looping Statements : using for loop, using while Loops, Using do Loops. Jump Statements: using break and continue, Unlabelled Statements, Labelled Statements. Arrays: Declaration, Instantiation and Initialization of Java Array, Types of Array - Single Dimension array, Multi-dimension array Strings: String, StringBuilder, and StringBuffer, The String Class, Important Facts About Strings and Memory, Important Methods in the String Class, The StringBuffer and StringBuilder Classes, Important Methods in the StringBuffer and StringBuilder Classes, File Navigation and I/O.		
MODULE III JAVA I/O 15 Streams: Types of Streams, The Byte-stream I/O hierarchy, Character Stream Hierarchy, Random Access File class, The java.io.Console Class, Serialization, Dates, Numbers, and Currency, Working with Dates, Numbers, and Currencies, Parsing, Tokenizing, and Formatting, Locating Data via Pattern Matching, Tokenizing.		
TOTAL PERIODS(Theory) 45		
LIST OF EXPERIMENTS:		
1. Implementation of simple java program using Command Line Arguments 2. Implementation of simple java programs using decision making statements 3. Implementation of simple java programs using Looping statements 4. Implementation of Simple java programs using Jump statements 5. Implementation of 1D Array		

6. Implementation of 2D Array
7. Implementation of String functions
8. Implementation of simple java program using Streams
9. Implementation of simple java program using Date and Number classes
10. Implementation of simple java program using Tokenizing

22PH201	PHYSICS		3/0/2/4
Nature of Course:	E (Theory skill based)		
Pre requisites:	Nil		
Course Objectives:			
1.	To learn the fundamental concepts of physics and apply this knowledge to both scientific and engineering problems		
2.	To make the students enrich basic knowledge in various fields such as Laser, Optical fibers, Photonics, Superconductors and quantum mechanics of physics and apply the same in computing fields.		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C201.1	Understand the basic concepts of lasers and its application in Engineering field.		[U]
C201.2	Recall the various types of optical fibers and its applications.		[R]
C201.3	Describe and conduct superconductors. experiments in photonic materials and fundamental concepts of superconductors.		[U]
C201.4	Discuss the basic concepts of Quantum Mechanics and quantum ideas at the nanoscale.		[U]
C201.5	Apply the gained knowledge to solve the problems related to their field of study.		[AP]
Course Contents:			
MODULE I LASER AND FIBER OPTICS 15 Laser: Characteristics of laser – Principle of spontaneous emission and stimulated emission – Einstein's theory of matter radiation interaction and A and B coefficients (derivation) – Population inversion – Pumping – Nd-YAG and CO2 laser – Applications: Laser printer, Data storage and Bar code scanner. Fiber optics: Light propagation through fibers, acceptance angle, numerical aperture – Types of fibers: step index, graded index single mode and multimode –V – number - Optical fibers for computing applications–PC to PC communication and fiber optics in computer networking. Photonics and Superconductors 15 Hours Photonics Introduction to photonic materials – Photonic crystals – Liquid crystal display (LCD) Light sources: Light emitting diode (LED) –Photo dependence resistor– Photo detectors: PIN, avalanche – Photo voltaic effect Solar cell – Applications of photonic materials in computing – optical computing.			
MODULE II SUPERCONDUCTORS: 15 Properties of Superconductors: effect of magnetic field, Meissner effect, effect of current, thermal properties isotope effect, Josephson effects and its applications – Type–I and Type–II Superconductors –BCS theory – High TC superconductors – Application of Superconductors: magnetic levitation, SQUID and cryotron Quantum Mechanics and Quantum computing			
MODULE III QUANTUM MECHANICS: 15 Streams: Types of Streams, The Byte-stream I/O hierarchy, Character Stream Hierarchy, Random Access File class, The java.io.Console Class, Serialization, Dates, Numbers, and Currency, Working with Dates, Numbers, and Currencies, Parsing, Tokenizing, and Formatting, Locating Data via Pattern Matching, Tokenizing.			
TOTAL PERIODS(Theory) 45			
LIST OF EXPERIMENTS:			
1. Determination of Particle size and measurement of d-spacing in CD using Laser. 2. Determination of wavelength, angle of divergence and coherence length of laser source. 3. Determination of numerical aperture and acceptance angle parameter of optical fiber using Laser source.			

4. Determination of Characteristics curves of solar cell.
5. Determination of Characteristics curve of light dependence resistor (LDR).
6. Determination and verification of Stefan law.
7. Determination of Planck's constant using electroluminescence.
8. Determination of wavelength of mercury spectrum Spectrometer
9. Determination of bandgap of semiconductor.
10. Determination of entangled photons using spectrometer.
11. Determination of pressure required to shut off the fuel pump nozzle.
12. Determination of capacitance required to shut off the circuit in a circuit breaker.
13. Determination of earth, neutral and phase line in a circuit.

SEMESTER – III

22CY301	CYBER SECURITY ESSENTIALS		3/0/0/3
Nature of Course	C (Theory)		
Prerequisites	NIL		
Course Objectives:			
1	To understand and learn to analyze the security of in-built cryptosystems.		
2	To introduce keywords and jargons involved in operating system security..		
3	To get a firm knowledge on network basics and familiarize on security countermeasures		
4	To create awareness and understanding on cyber-attacks and data privacy.		
Course Outcomes:			
Upon completion of the course, students shall have ability to:			
C301.1	Understand the fundamentals of networks security, security architecture, threats and vulnerabilities		[U]
C301.2	Explain data encryption standards and classify different modes of operation..		[U]
C301.3	Analyze the possible security attacks in complex real time systems.		[A]
C301.4	Discover cyber-attacks and learn data privacy issues and preventive measures.		[AP]
C301.5	Impart various privacy policies for an organization.		[AP]
Course Contents:			
MODULE I: INTRODUCTION TO SECURITY		15	
Computer Security Concepts – Cybersecurity Threats, Vulnerabilities and Attacks, The OSI Security Architecture –Security Attacks – Security Services and Mechanisms – A Model for Network Security – Classical encryption techniques: Substitution techniques, Transposition techniques, Steganography – Foundations of modern cryptography: Perfect security – Information Theory – Product Cryptosystem – Cryptanalysis.y.			
MODULE II: SECURITY IN OPERATING SYSTEMS AND DEFENCES		15	
Security in Operating Systems: Security in the Design of Operating Systems – Rootkit – Network security attack –Threats to Network Communications – Wireless Network Security – Denial of Service – Distributed Denial-of-Service – Security Countermeasures: Cryptography in Network Security –Firewalls – Intrusion Detection and Prevention Systems – Network Management – Databases – Security Requirements of Databases – Reliability and Integrity – Database Disclosure.			
MODULE III: CYBER SECURITY MANAGEMENT		15	
Security Planning – Business Continuity Planning – Handling Incidents – Risk Analysis – Dealing with Disaster –Incident response and management - Cyber security in industrial contexts - Information Governance in Industry –Securing Internet of Things data – Intrusion detection and prevention - Cybercrime– Defending Cyber Warfare and Ransomware..			
		Total Hours:	45
Text Books:			
1.	William Stallings, "Cryptography and Network Security - Principles and Practice", Seventh Edition, Pearson Education, 2017.		
2.	Brooks, Charles J., Christopher Grow, Philip Craig, and Donald Short, “Cybersecurity essentials”, John Wiley & Sons, 2018, 2020.		

3.	Amit Garg, Krishna Kumar Goyal, "Cyber Security", Laxmi Publications, 2022.

22MA302		RANDOM VARIABLE & STATISTICS		3/1/0/4
Nature of Course		J (Problem analytical)		
Prerequisites		Concepts of basic differentiation and Integration		
Course Objectives:				
1.	To study the basic probability concepts			
2.	To understand and have a well – founded knowledge of standard			
3.	To acquire skills in handling situations involving more than one random variable			
4.	To learn the concept of testing hypothesis using statistical analysis			
5.	To apply the Analysis of variance classifications in one way and two way			
Course Outcomes				
Upon completion of the course, student shall have ability to				
C302.1	Recall the concepts of basic probability			[R]
C302.2	Understand how to handle situations involving random variable			[U]
C302.3	Applying different standard distribution methods in real life problems.			[AP]
C302.4	Derive the logic and attain the knowledge of hypothesis testing.			[AP]
C302.5	Apply the analytical comparisons using ANOVA.			[AP]
Course Contents:				
Module I: Probability and Standard distributions				20
Probability: Probability concepts – Addition and Multiplication law of probability – Conditional probability – Total probability theorem – Bayes theorem. Standard distributions: Discrete distributions – Binomial, Poisson, Geometric – Continuous distributions – Uniform, Exponential, Normal distributions. Case study : Bayes theorem in Data Science, Binomial, Poisson and Normal distributions in Data Analytics.				
Module II: Random Variables				20
One dimensional random Variables: Discrete random variables – Probability mass function – Continuous random variables – Probability density function – Moment generating Function. Two dimensional random variables: Joint distributions – Marginal and conditional distributions – Covariance – Correlation – Regression – Central limit theorem (statement only). Case Study : Joint distribution in Machine Learning, Correlation and regression in Big Data Analytics..				
Module III: Statistics				20
Mean, median, mode and standard deviation for raw, discrete and continuous data – Testing of Hypothesis: Large sample – Z test – Test of significance – Proportions – Small sample test – t test and F test for single mean – difference of means and variance – Chi -square test for goodness of fit and independence of attributes. Analysis of variance : One way and two way classifications. Case Study: ANOVA based analysis for water quality monitoring through Internet of Things, Chi-square test in Data Analysis and Algorithm.				
				Total Hours 60
Text Books:

22TA201		TAMILS AND TECHNOLOGY		1/0/0/1
Nature of Course		C (Theory Concept)		
Prerequisites		NIL.		
Course Objectives:				
1	To know about weaving, ceramic, design and construction technologies in sangam age.			
2	To know the significance of technologies such as manufacturing, agriculture and irrigation.			
3	To understand the development of Scientific Tamils and Tamil Computing.			
Course Outcomes				
Upon completion of the course, students shall have ability to				
C201.1	Describe about the weaving industry in sangam age and ceramic technology.			[U]
C201.2	Observe the design of houses, sculptures and construction of temples.			[U]
C201.3	Relate the various manufacturing materials and stone types in Silappathikaram.			[U]
C201.4	Understand the significance of agriculture and irrigation technology in ancient period.			[U]
C201.5	Explain the growth of scientific Tamil, Tamil computing and digitization of Tamil books.			[U]
Course Contents:				
Module1: Weaving and Ceramic Technology				
Ware Potteries (BRW) – Graffiti on Potteries. Design and Construction Technology: Designing and Structural construction House & Designs in household materials during Sangam Age - Building materials and Hero stones of Sangam age – Details of Stage Constructions in Silappathikaram - Sculptures and Temples of Mamallapuram - Great Temples of Cholas and other worship places - Temples of Nayaka Period - Type study (Madurai Meenakshi Temple) – Thirumalai Nayakar Mahal - Chetti Nadu Houses, Indo - Saracenic architecture at Madras during British Period.				
Module2: Manufacturing Technology:				
Art of Ship Building - Metallurgical studies - Iron industry - Iron smelting, steel - Copper and gold - Coins as source of history - Minting of Coins – Beads making-industries Stone beads - Glass beads - Terracotta beads - Shell beads/ bone beats - Archeological evidences - Gem stone types described in Silappathikaram. Agriculture and Irrigation Technology: Dam, Tank, ponds, Sluice, Significance of KumizhiThoompu of Chola Period, Animal Husbandry - Wells designed for cattle use - Agriculture and Agro Processing - Knowledge of Sea - Fisheries – Pearl - Conche diving - Ancient Knowledge of Ocean - Knowledge Specific Society.				
MODULE3: Scientific Tamil & Tamil Computing				
Development of Scientific Tamil - Tamil computing – Digitalization of Tamil Books – Development of Tami Software – Tamil Virtual Academy – Tamil Digital Library – Online Tamil Dictionaries – Sorkuvai Project..				
Total Hours				15
TextBooks:				
1	Social Life of Tamils (Dr.K.K.Pillay) A joint publication of TNTB & ESC and RMRL – (in print)			
2	Social Life of the Tamils - The Classical Period (Dr.S.Singaravelu) (Published by: International Institute of Tamil Studies.			
3	Historical Heritage of the Tamils (Dr.S.V.Subatamanian, Dr.K.D. Thirunavukkarasu) (Published by: International Institute of Tamil Studies).

22IT302	WEB TECHNOLOGY		1/0/4/3
Nature of Course	F (Theory Programming)		
Prerequisite	Java Programming		
Course Objectives:			
1	To discuss the essence of front-end development skills.		
2	To understand and use JavaScript in client-side web applications.		
3	To impart the knowledge of React components used in web application development.		
4	To deploy and test the React App used in Web Applications		
Course Outcomes:			
Upon completion of the course, students shall have ability to			
C302.1	Demonstrate the client-side JavaScript application development with React library	[U]	
C302.2	Construct the single page applications in React.	[AP]	
C302.3	Apply the react features including components and forms.	[AP]	
C302.4	Analyze the functionality of front-end UI applications using React.	[A]	
C302.5	Examine the responsive react applications with CSS	[AP]	
Course Contents:			
Module I: Introduction		15	
Fundamentals of React – Requirements, JavaScript Essentials, Event loop, Node.js Fundamentals, Traditional Programming Limitations, React JSX, Overview of frameworks, libraries for client side Web applications, React DOM, Component Instantiation, Environment Setup for React Application, NPM commands, VS Code extensions for ES6, Handler Function- React(formatting and check styles), Hello world app in React, React Essential Features and Syntax, React App Project Directory Structure, Overview of Webpack, Babel, React Component Basic, Create React Component, Understanding JSX, Limitations of JSX, Working with Components and Reusing Components..			
Module II: React Components and Styles		15	
React Components - Props and State, Understanding and using Props and State, Handling Events with methods, Manipulating the State, Two way data-binding, Functional (Stateless) VS Class (Stateful) Components, Parent – Child Communication, Dynamically rendering contents, Showing Lists, List and keys, Styling Components, CSS Styling, Scoping Styles using Inline Styles, Limitations of inline styles, Inline Styles with Radium, Google Material UI, Installing Material UI, Material UI AppBar, Material UI's Toolbar, Custom React NavBar. CSS - Material UI Buttons, Using Material UI - Rendering a Button, Material UI Card, Material UI Checkbox, Material UI Grid Component, Material UI IconButton, Material UI Paper Component, Style Material UI Components with my own CSS, UI Templates for Business, Typography Usage, Debugging React Apps, Understanding React Error Messages, Handling Logical Errors, Debugging React apps using google developer tools and React DevTool. Understanding Error Boundaries, React .Component life cycle, Updating life cycle hooks, Pure Components, React’s DOM Updating Strategy, Returning adjacent elements, Fragments, React Component in Details, Higher Order Components, Passing unknown Props, Validating Props, Using References, React Context API, Updated Lifecycle hooks.			

Module III: Deploying and Testing Web Applications		15
React Projects, Demo apps, HTTP Requests/Ajax Calls, HTTP Requests in React, Introduction of Axios package, HTTP GET Request, fetching & transforming data, HTTP POST, DELETE, UPDATE, Handling Errors, Adding/Removing Interceptors, Creating/Using Axios instances, Redux, React Thunk, Difference between Thunk & other, React hooks, Application Using React & Redux , React Routing, Routing and SPAs, Setting Up the Router Package, react-router vs react-router-dom, Preparing the Project For Routing, Switching Between Pages. Routing-Related Props, The "withRouter" HOC & Route Props, Passing & extracting route/query parameters, Using Switch to Load a Single Route, Navigating Programmatically. React Forms and Form Validation, Creating a Custom Dynamic Input Component, Setting Up a JS Config for the Form, Dynamically Create Inputs based on JS Config, Adding a Dropdown Component. Handling User Input, Handling Form Submission, Adding Custom Form Validation, Fixing a Common Validation, Adding Validation Feedback, Showing Error Messages, Handling Overall Form Validity, Deploying React App to the Web, Testing React apps with Jasmine & implementing JEST.		
Total Hours:		45
Lab Component: 1. Create a Stateless Functional Component 2. Create a Stateful Class Component 3. Implementation of Conditional Rendering using Class Component 4. Implementation of Communication (Parent-child) between Components 5. Create material UI Card using React 6. Design a Custom Navigation bar using React 7. Implementation of React component to handle HTTP requests 8. Implementation of a Dropdown component using React 9. Implementation of Routing in React 10. Implementation of FORM validation in React		
TOTAL HOURS:		30

22CS301	ADVANCED JAVA PROGRAMMING		1/0/4/3
Nature of Course		F (Theory Programming)	
Prerequisites		Java Programming	
Course Objectives:			
1.	To provide insight knowledge of OOP concepts and usage of this, static, super and final keywords.		
2.	To discuss about different type of Collection Frameworks.		
3.	To demonstrate threads, JDBC & exception handling with real world examples		
4.	To illustrate designing of GUI applications using swing component..		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C302.1	Illustrate the OOPs concepts like Constructors, Inheritance, Polymorphism and the usage of this, static, super and final keywords		[AP]
C302.2	Apply the concepts of Exception Handling in real world applications and usage of collection frameworks		[AP]
C302.3	Develop Multithreaded applications		[AP]
C302.4	Develop GUI Applications using swing component and to explain the concept of Servlets		[AP]
C302.5	Develop java application to interact with database by using relevant JDBC Driver.		[AP]
Course Contents:			
Module 1 – Introduction to OOPS			15
Class and Object, Encapsulation and Abstraction, Inheritance, Polymorphism, Message Passing, Keywords : this, super, static, final, extends and implements. Method Signature and Prototype, Mutator Methods and Accessor Methods, Var-Arg Method, hashCode() and toString() methods. Immutable Objects Vs Mutable Objects, User defined Immutable Class, Constructors : Introduction, Default Constructor, User Defined Constructors, Constructor Overloading, Instance Variable, Instance Methods, Instance Block and Instance Flow Of Execution. Regular Expressions (RegEx). Inheritance Introduction, Types of Inheritance, Up Casting, Down Casting, IS-A Relationship & HAS-A Relationship, Composition Vs Aggregation, Polymorphism: Method Overloading, & Method Overriding.			
Module 2: Abstraction, Exception Handling & Collections			15
Abstraction: Abstract Methods and Abstract classes. Interfaces, abstract classes and Interfaces, Concrete Methods Vs Abstract Methods, Differences between classes, abstract classes and Interfaces, Marker Interfaces Exception - try catch block, Finally Block, Exception Hierarchy, Multiple Exceptions In a Catch Block, Parameterized Try Block, Overriding Methods And Exception. Creating Your Own Exception, The Assert Keyword, The Generics Framework, Collections: Set, List, Map & Tree, The Iterator Interface. Working with Hashtable Collection Threads: Introduction to Threads, Creating And Starting Threads, Basic Thread Control Methods. Multithreading, Working withMultiple, threads, Thread Life Cycle, Thread Priorities, Synchronizing Methods			
.Module 3 : Swings, Servlets & JDBC			15

Swings: Introduction, JLabel, JButton, JTextField, JTextArea, JPasswordField, JCheckBox, JComboBox, JRadioButton, JScrollBar, JMenu, JMenuItem and JMenu. JDBC: Drivers, CURD operations, Database connectivity Servlets : Overview of Servlets, Servlet Life Cycle, Servlet Request and Response, web.xml and its need, Servlet Configuration, Session Tracking

Total Hours **45**

List of Experiments

- 1 Implementation of default and parameterized constructors.
- 2 Implementation of method overloading and overriding.
- 3 Implementation of Inheritance.
- 4 Implementation of Abstract and Interface concepts
- 5 Programs using collection Interface.
- 6 Implementation of multithreading Concepts.
- 7 Program to handle multiple exception using try, catch and finally block.
- 8 Implementation of swing components.
- 9 Implement Simple application using servlets.
- 10 Implement CURD operation using JDBC

TOTAL HOURS: **15**

22AD301	DESIGN AND ANALYSIS OF ALGORITHMS		1/0/4/3
Nature of Course		I (Problem Concepts)	
Prerequisites		Data Structures and Algorithms	
Course Objectives:			
1	To understand the techniques for analyzing the computer algorithms.		
2	To learn the paradigms for designing the algorithms.		
3	To analyze the efficiency of various algorithm design techniques / paradigms for the same problem.		
4	To understand the graphical algorithms for solving problems.		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C301.1	Illustrate the searching and sorting algorithms.		[U]
C301.2	Interpret the design principles of greedy and pattern searching algorithms with examples.		[AP]
C301.3	Explore problem-solving methodology used in Backtracking.		[A]
C301.4	Analyze the time and space complexities of dynamic programming strategy in solving complex problems.		[A]
C301.5	Employ range query and graph algorithms in real world problems.		[AP]
Course Contents:			
Module 1 – Sorting, Searching and String Algorithms			15
Time Complexity Analysis – Mathematical Analysis of Recursive and Non Recursive algorithms - Searching & Sorting, Divide and Conquer – Bubble sort, Insertion sort, Selection sort, Binary search, quick sort, merge sort – Heaps & Hashing –Binary heap, heapsort - Greedy Algorithms–Activity selection problem, Fractional knapsack - String algorithms - Naive algorithm, Rabin Karp algorithm, KMP algorithm, Z algorithm, Manacher’s algorithm – Huffman coding.			
Module 2- Greedy and Dynamic Programming			15
Backtracking - Rat in a maze, Permutation and Combination, N Queen problem and Problems on Backtracking, Knight's Tour Problem, Subset Sum, M-Coloring Problem, Hamiltonian Cycle Problem, Sudoku Solver, Sieve of Sundaram, Prime Numbers after P with Sum. Dynamic Programming – Greedy vs Dynamic programming, Top-down and bottom-up approach, Longest Common Subsequence, Longest increasing subsequence, Edit distance, 0-1 Knapsack, Coin change problem, Minimum Cost Path, Subset Sum Problem, Maximum Size Square Sub Matrix with all 1s, Longest Palindromic Subsequence.			
Module 3 - Tree and Graph Algorithms			15
Range query Algorithms - Range Minimum Query (Brute Force Approach). Segment Tree, Range Minimum Query on the Constructed Segment Tree, Range Minimum Query Using Sparse Table. Graph Algorithms – Single source shortest path algorithm, Floyd warshall’s Algorithm - Minimum Spanning Tree.			
			Total Hours 45
Lab Component			

1	Implementation of Linear, Binary Search and Tries.
2	Implementation of Sorting Algorithms - Bubble, Insertion, Selection, Merge Sort, Quick sort, Heap Sort.
3	Implementation of Greedy Algorithms.
4	Implementation of Pattern Searching Algorithms.
5	Implementation of Backtracking Algorithms.
6	Implementation of Dynamic Programming.
7	Implementation of Range Query Algorithms.
8	Implementation of Minimum Spanning Tree.
9	Implementation of Shortest path Algorithms.
10	Implementation of Maximum Flow Minimum cut Algorithm

Total Hours: 30

22CS403		OPERATING SYSTEMS		3/0/2/4
Nature of Course		F (Theory Programming)		
Pre requisites		Nil		
Course Objectives:				
1	To identify the structure and functions of Operating System.			
2	To describe the OS mechanisms to handle processes and threads.			
3	To experiment CPU scheduling policies, synchronization techniques and deadlock handling in real time problems.			
4	To articulate Memory management schemes.			
5	To discuss Device Management, I/O and File systems concepts.			
Course Outcomes				
Upon completion of the course, students shall have ability to				
C403.1	Review the basic concepts and functions of operating systems.			[U]
C403.2	Interpret the processes and threads in operating systems for real world problems.			[U]
C403.3	Examine CPU scheduling algorithms, process synchronization mechanisms and deadlock handling methods.			[AP]
C403.4	Practice memory management techniques including virtual memory and page replacement algorithms.			[AP]
C403.5	Illustrate the concepts related to mass storage, I/O and file system.			[AP]
Course Contents:				
Module 1: Introduction		15		
Defining Operating Systems - User view - System view - Computer-System organization - Computer System Architecture - Operating System Operations - Resource Management - Virtualization - Computing Environments - OS Services - System Calls - Overview of Operating System Specific applications - OS Structures - System Boot. Process: Concept - Scheduling – Operations. Thread: Overview - Multicore Programming - Multithreading Models.				
Module 2: Process & Memory Management		15		
CPU Scheduling - Process Synchronization: Synchronization Tools - Classic Problems of Synchronization – Deadlocks: System Model- Deadlock in Multithreaded Applications - Deadlock Characterization - Methods for Handling Deadlocks - Prevention - Avoidance -Detection – Recovery. Main memory: Background - Contiguous Memory Allocation – Paging - Structure of the Page Table – Swapping. Virtual memory - Background - Demand Paging - Copy-on-Write - Page Replacement - Allocation of Frames - Thrashing - Memory Compression.				
Module 3: File Management, I/O and storage		15		

Understand the access control requirements for Social Network, Enforcing Access Control Strategies, Authentication and Authorization, Roles-based Access Control, Host, storage and network access control options, Firewalls, Authentication, and Authorization in Social Network, Identity & Access Management, Single Sign-on, Identity Federation, Identity providers and service consumers, The role of Identity provisioning.		
Total Hours		45
Laboratory Component:		
1.	Study of Basic Linux Commands, proc file system of linux, disk I/O, buffer caches, disk monitoring tool	
2.	Implementation of Shell Programming	
3.	Implementation of Unix System Calls	
4.	Implementation of Non Pre emptive and Pre emptive CPU Scheduling Algorithms	
5.	Implementation of Dining Philosopher"s Problem to demonstrate Process Synchronization	
6.	Implementation of Banker"s Algorithm for Deadlock Avoidance	
7.	Implementation of Memory Allocation and Management Techniques	
8.	Implementation of Page Replacement Techniques	
9.	Implementation of File organization Techniques and study on modern file systems like ZFS, btrfs, ext4 etc.	
10.	Implementation of Disk Scheduling Algorithms. Compare CPU and Disk Scheduling algorithms in terms of the number of voluntary and involuntary context switches.	
Total Hours:		30
Text Books:		
1.	Abraham Silberschatz, Peter B. Galvin, Greg Gagne, "Operating System Concepts" 10th Edition, John Wiley, 2018

22MC103	SOFT SKILLS		2/0/0/0
Nature of Course	Theory Concept		
Prerequisites	Technical Communication Skills		
Course Objectives:			
1.	To develop the students competency level and their capabilities.		
2.	To teach the students to be effective in workplace and social environments.		
3.	To create self confidence among the students and to resolve stress and conflict within themselves.		
4.	To help the students to enhance their career skills by increasing their productivity and performances.		
5.	To concentrate more on conversation skills, presentation skills, verbal ability, critical and creative thinking.		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C103.1	Remember the principles of soft skills required for their profession.		[R]
C103.2	Understand the importance of Interpersonal communication Skills among individuals, groups and cultures.		[U]
C103.3	Apply verbal and non-verbal communication skills in corporate environment.		[AP]
C103.4	Analyze and apply creativity skills, critical thinking skills and problem solving skills.		[A]
C103.5	Articulate oral and written messages in an appropriate and persuasive manner to suit specific purposes, audiences and contexts at work place.		[AP]
C103.6	Apply good teamwork skills and Leadership Skills		[AP]
Course Contents:			
Module1: Professional Communication Skills		10	
Introduction to the Soft Skills, Performance Evaluation 1 –Significance of Soft Skills-Understanding the basic Communication Principles –Listening Skills- Listening Exercises-Speaking Skills- How to start and Sustain a Conversation- Speaking in Groups- Understanding self and Personal Branding, attitude, types of attitude, Positive Attitude, Self Confidence and Self-Motivation - Personal Application/Action Taken.Advanced Writing Skills-Principles of Business Writing- E mails- Writing Reports- Types of Reports- Strategies for Report Writing- Personal Application/Action Taken.Verbal Ability- Analogy- Classification- Odd One Out- Idioms and Phrases- Sentence Correction- Empathy and its importance in career -Personal Application/Action Taken.			
Module2: : Interpersonal Communication		10	
Nonverbal Communication- Individual, Groups and Cultures- Body Language- Attire and Etiquettes- Interpersonal Skills- dealing with diverse People- Networking- Emotional Intelligence and its importance. Personal Application/Action Taken. Developing Creativity- Critical Thinking and Problem Solving Skills- Making the Right Choice- Never Give Up- Begin to Grow- Personal Application/Action Taken.Interviews- Facing Job Interviews - Planning and Preparing- Effective Resume along with Covering Letter- Planning and Preparing- Personal Application/Action Taken.Self-Discipline - Self Presentation - Personal Application/Action Taken.			
MODULE3: Teamwork and Leadership Skills		10	
Industry Expectations- Universal Hiring Rule- Personal Application/Action Taken.Importance of Human			

Values- Importance of Team Work- Developing Key Traits in Motivation, Persuasion, Negotiation and Leadership Skills- Being an Effective Team Player- Personal Application/Action Taken.Planning-Prioritization - Delegation- Conflict Management- Decision and its necessity in crucial situations- Group Discussion- Personal Application/Action Taken.Essential Skills in working Strategies- Presentation and Interaction Skills- What to Present and How- Being Assertive- Multimedia Presentation-Making Effective Presentations.
Interview Skills- Do's and Don'ts - Body Language – Answering the Common Questions of Interview- Performance Evaluation 2- Mock Interview.

Total Hours 30

SEMESTER – IV

22CY401		ETHICAL HACKING		3/1/0/4
Nature of Course:		E (Theory Skill based)		
Prerequisites:		Nil		
Course Objectives:				
1.	To gain comprehensive knowledge and practical skills in ethical hacking.			
2.	To develop advanced skills in ethical hacking techniques.			
3.	To acquire in-depth knowledge and practical expertise in ethical hacking.			
Course Outcomes:				
Upon completion of the course, students shall have ability to:				
C401.1	Remember basic Linux Commands and their usages.			[A]
C401.2	Understand ethical hacking methodologies and techniques to identify security vulnerabilities.			[AP]
C401.3	Apply advanced ethical hacking techniques to secure systems and prevent attacks.			[U]
C401.4	Understand the knowledge of wireless network hacking, cryptographic attacks, and social engineering for effective threat mitigation.			[AP]
C401.5	Apply incident response and digital forensics techniques to investigate and respond to security incidents.			[U]
Course Contents:				
Module 1: Linux Review and Fundamentals				15
Linux boot process - Linux files and directories - Linux logs - Advanced linux command usage - Windows boot process - Windows files and directories - Windows command line - Advanced Windows topics - Active directory familiarization - Windows infrastructure - PowerShell command line. Case Study: Working advanced Commands in Ubuntu				
Module 2: Importance of Ethical Hacking				15
Introduction - Ethical Hacking Methodology and Phases - Foot printing and Reconnaissance Techniques - Scanning Networks and Enumerating System Information - Vulnerability Assessment and Penetration Testing - Wireless Network Hacking and Security - Web Application Security and Hacking - Social Engineering Attacks and Countermeasures - Malware Analysis and Reverse Engineering - Sniffing and Spoofing Techniques - Cryptography and its Role in Ethical Hacking - Mobile Device Hacking and Security – Case Study: Unveiling Vulnerabilities and Safeguarding Digital Assets				
Module 3: Linux Privilege Escalation and Client Management				15
Advanced Web Application Security Testing - SQL Injection Attacks and Prevention - Cross-Site Scripting (XSS) Attacks and Countermeasures - Exploiting Buffer Overflows - Advanced Network Enumeration and Fingerprinting - Bypassing Authentication Mechanisms - Wireless Network Attacks and Countermeasures - Advanced Cryptographic Attacks - Advanced Malware Analysis Techniques - Advanced Packet Sniffing and Analysis - Web Services Security Testing - IoT Security Testing and Exploitation. Case Study: Malware Analysis for Uncovering Cyber Threats				
Total Hours				45

22CY402	ACCESS CONTROL AND IDENTITY MANAGEMENT		3/0/2/4
Nature of Course	H (Theory)		
Pre requisites	Cyber Security Essentials		
Course Objectives:			
1.	To comprehend the importance of IAM		
2.	To Analyze the risks and build appropriate authentication in Identity and Access Management		
3.	To perform case studies of Identity and Access Management		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C402.1	Summarize the role of IAM with the appropriate regulations (Module 1)		[U]
C402.2	Analyze the various Standards which align with IAM concepts (Module 1)		[A]
C402.3	Apply the steps in the technique of identity and risk assessments (Module 2)		[AP]
C402.4	Explain about Access Control Methodologies (Module 3)		[U]
C402.5	Model IAM concepts in Real-time scenarios (Module 3)		[AP]
Course Contents:			
Module 1 - Introduction to Access Control and Identity Management		15	
Introduction to Access Control and Identity Management – Authentication and Authorization – Access Control Models - Access Control Attacks and Countermeasures - Role-Based Access Control (RBAC) - Attribute- Based Access Control (ABAC) - Access Control Lists (ACLs) and Permissions. Case Study: Implementing Attribute-Based Access Control (ABAC) in a Healthcare System.			
Module 2 – Introduction to Physical Security Industry		15	
Introduction to Physical Security Concepts - Risk Assessment and Management - Security Surveys and Site Assessments - Access Control Systems - Intrusion Detection Systems - CCTV Systems - Perimeter Protection - Physical Security Lighting - Lock and Key Management - Security Personnel Management - Emergency Response and Evacuation Planning - Security Technology Integration - Regulatory and Legal Considerations - Project Management and -Security Industry future trends. Case Study: Enhancing Campus Security through Integrated Physical Security			
Module 3 - CIAM Tool		15	
Jump Cloud-User and Group Management - Device Management: - Single Sign-On (SSO)- Multi- Factor Authentication (MFA)- LDAP and RADIUS Integration- Directory-as-a-Service- Security Best Practices- Lifecycle Management- API Integration- Reporting and Auditing- Troubleshooting and Support-Case Study: Implementing Secure Single Sign-On (SSO) and Multi-Factor Authentication (MFA) with JumpCloud for a Growing Enterprise.			
		Total Hours: 45	
Lab Exercises			
1.	Designing an Access Control System		
2.	Conducting a Risk Assessment of an Access Control System		
3.	Configuring an Active Directory Domain Controller		

4.	Managing Windows Accounts and Organizational Units	
5.	Configuring Windows File System Permissions	
6.	Configuring a Remote Access VPN	
7.	Encrypting and Decrypting Files with Public Key Infrastructure	
8.	Scanning an Active Directory Domain Controller for Vulnerabilities	
9.	Enabling Audit Trails to Enforce Accountability	
10.	Applying the Security Policy Framework to an Access Control Environment	
Total Hours		30

22CY403		AUDITING IT INFRASTRUCTURE FOR COMPLIANCE		3/0/2/4
Nature of Course:		H (Theory)		
Pre requisites:		Nil		
Course Objectives:				
1	To comprehend the importance of IAM			
2	To Analyze the risks and build appropriate authentication in Identity and Access Management			
3	To perform case studies of Identity and Access Management			
Course Outcomes:				
Upon completion of the course, students shall have ability to				
C403.1	Understand the role of information systems security compliance.			[U]
C403.2	Analyze the IT audit for compliance and, standards and frameworks.			[A]
C403.3	Apply the parameters required to conduct and report on an IT infrastructure audit for organizational compliance.			[AP]
C403.4	Describe information security systems compliance requirements within the seven domains of an IT infrastructure.			[U]
C403.5	Understand the qualifications, ethics, and certification organizations for IT auditors at-time scenarios			[AP]
Course Contents:				
Module 1: INFORMATION SECURITY COMPLIANCE AUDIT				15
The Need for Information Systems Security Compliance-Overview of U.S. Compliance Laws- Scope of an IT Infrastructure Audit for Compliance-Auditing Standards and Frameworks, SSDLC and its importance.				
Module 2: TECHNICAL ASPECTS OF IT COMPLIANCE AUDITING				15
Planning an IT Infrastructure Audit for Compliance-Conducting an IT Infrastructure Audit for Compliance-Writing the IT Infrastructure Audit Report- Compliance Within the User Domain- Compliance Within the Workstation Domain-Compliance Within the LAN Domain- Compliance Within the LAN-to-WAN Domain-Compliance Within the WAN Domain.				
Module 3: PRACTICAL APPLICATION AND COMPLIANCE REPORTING				15
Compliance Within the Remote Access and System/ Application Domains Compliance Within the Remote Access Domain - Compliance Within the System/Application Domain- Ethics, Education, and Certification for IT Auditors.				
Total Hours				45
List of Experiments				
1	Assess the Impacts of Sarbanes-Oxley(SOX) Compliance Law on Enron			
2	Role in IT Security Domains and Auditing Compliance			

3	Define a Process for Gathering Information Pertaining to A HIPAA Compliance Audit
4	Align an IT Security Assessment, Risks, Threats and Vulnerability Assessments to achieve Compliance
5	Define a Process for Gathering Information Pertaining to a GLBA Compliance Audit
6	Auditing the Workstation Domain for Compliance
7	Auditing the LAN-to-WAN Domain for Compliance
8	Auditing the Remote Access Domain for Compliance
9	Auditing The System /Application Domain for Compliance
10	Charting Your Career Path - Professional Certifications

22CS402	WEB FRAMEWORKS		1/0/4/3
Nature of Course	D (Theory Application)		
Prerequisites	Java Programming		
Course Objectives:			
1	To impart the knowledge of REST API and HTTP methods used in Spring Boot Framework.		
2	To discuss LIKE queries using JPA and handle CRUD operations with JPQL.		
3	To explore the various relational mapping with JPA.		
4	To deploy Spring AOP - Annotation Based applications.		
5.	To Understand the types of scanning Techniques		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C402.1	Create simple applications with REST API and handle HTTP methods.		[AP]
C402.2	Apply database connectivity with JPA using queries		[AP]
C402.3	Build application using Spring Boot and handle CRUD operations with JPQL.		[AP]
C402.4	Demonstrate various relational mapping with JPA.		[AP]
C402.5	Develop a real-time application using UI & Spring AOP		[AP]
Course Contents:			
Module 1 APIs and JSON			15
REST API, HTTP Methods in Rest, Overview of JSON, Controller and Service Layer, GET API with JSON & Spring Boot, @Value annotation, Runnable JAR Of Spring Boot App, @JsonIgnore Usage, @JsonProperty Usage, MySQL Database.			
Module 2 Spring JPA			15
Spring Boot-MySQL Database Connection with JPA, @Repository Annotation, GET API with JPA, HTTP POST API, PUT API, DELETE API with @RequestParam, Path variable - @PathVariable, AND,OR,IN Query using JPA, Pagination & Sorting using JPA. @Transient Annotation, Queries using JPA, Starts and Ends with query using JPA, JPQL with @Query Annotation, Select, Update, Delete with JPQL.			
Module 3 JPA Mapping with Spring Boot			15
OneToOne Relationship Mapping with JPA, Join Query, Lazy Loading in JPA, BiDirectionalOneToOne Relationship with JPA, OneToMany Relationship with JPA, Insert Record with OneToOne and OneToMany Relationship and JPA. SwaggerUI with Spring Boot, OpenUI with Spring Boot, Logging with Spring Boot, Changing Log Level,Logging Request and Response JSON, Logging properties with Spring Boot. AOP Terms, @BeforeAdvice with Method Parameter,@After Advice,@AfterReturning Advice, @Around Advice.			
			TotalHours 45
Laboratory Experiments:			
1	Display the information about the current weather in a certain location using RESTful API use a weather forecast provider such as openweathermap.org.		
2	Create your own app that embeds the information about flights, hotels and rental cars using Skyscanner API.		

3	Create a simple Spring Application and inject the literal values by setter injection. So, create a simple class Employee having three attributes Id, Name, and Designation. Create setter methods for these attributes and a simple method to print the details of the student.
4	Create a simple payroll service that manages the employees of a company. Store employee objects in a database, and access them (via something called JPA).
5	Create a simple payroll service that manages the employees of a company. Perform the following LIKE queries using query methods with the keywords Containing, Contains, IsContaining, StartsWith and EndsWith.
6	Create a simple payroll service that manages the employees of a company. Perform the following LIKE queries using query methods with the keywords NotContains, NotContaining and NotLike.
7	Create a Spring Boot application with Student entity and Student JPA repository. Use Spring Rest Controller API to perform CRUD operations on Student data.
8	Build a simple Rest API application called Donors. This application manages blood donors information and allows its users to Add a new donor, update existing donor information, view existing donors and delete a donor information from the application

Total Hours: 45

22AD401	CLOUD COMPUTING		1/0/4/3
Nature of Course	F (Theory Programming)		
Prerequisites	Data Base Management Systems		
Course Objectives:			
1	To understand the evolution of AWS from the existing technologies.		
2	To have knowledge on AWS security and various scaling methods.		
3	To team the necessary skills for design, develop and deploy services in creatingwith the help of docker.		
4	To implement automated system update and DevOps lifecycle		
5	To understand virtualization and provide the perfect security for the entire infrastructure.		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C401.1	Demonstrate the basic global infrastructure of the AWS Cloud.		[AP]
C401.2	Identify an appropriate solution using AWS Cloud services for various use cases.		[U]
C401.3	Interpret how the components of Docker containers support compute container implementations.		[AP]
C401.4	Examine common Infrastructure Servers, Availability and Scalability.		[A]
C401.5	Learn why automation, culture, and metrics are essential to a successful DevOps project.		[U]
C401.6	Analyze various cloud models and apply them to solve problems.		[A]
Course Contents:			
Module I MANAGING CLOUD USING AWS		15	
Introduction,Future of AWS, Services - AWS EC2, AWS S3 - Cloud storage, Types, Benefits, AWS IAM - AWS Security,Working of IAM, Components AWS CloudFront Working, Benefits. Introduction, Snapshots vs AMI, Different scaling plans. Introduction, Benefits, Algorithms used for load balancing. Case study: E-commerce Website Infrastructure on AWS.			
Module 2 CONTAINERIZATION USING DOCKERS		15	
Docker, Containers, Usage of containers, Terminology, Docker Run Static sites, Docker Images, Docker File, Docker on AWS, Docker Network, Docker Compose, Development Workflow, AWS EC Services. Case study: Microservices Architecture for a Social Media Application using Docker and AWS			
.Module 3 DEVOPS		15	
Introduction, Test Driven Development, Continuous Integration, Code coverage, Best Practices, Virtual Machines vs Containers, Rolling Deployments, Continuous Deployment, Auto Scaling. Case Study: Open Stack, Cloud based ML Solutions in Healthcare. Case study: Cloud-Based Machine Learning Solutions in Healthcare.			
Total Hours			45
List of Experiments:			
1	Study of Hosted Hypervisor and Bare Metal Hypervisor.		

2	Install a Virtualbox / VMware Workstation with different flavours of linux or windows S	
3	Implementation of Virtual Machine(S) and create a Virtual Datacenter.	
4	Configuration of Virtual Internetworking Components.	
5	Configuration of Virtual Internetworking Components.	
6	Install a docker engine and docker client on windows.	
7	Creation and removal of container, container images.	
8	Simulate a cloud scenario using CloudSim and run a scheduling algorithm that is not present in CloudSim	
9	Find a procedure to transfer the files from one virtual machine to another virtual machine Using VMWare	
10	Install Google App Engine. Create a hello world app and other simple web applications using python / java	
Total Hours		45

TextBooks:

22IT402		SOFTWARE TESTING		1/0/4/3	
Nature of Course		F (Theory Programming)			
Prerequisites		NIL			
Course Objectives:					
1.		To provide students with an understanding of Core Testing concept.			
2.		To learn the functional and non-functional testing.			
3.		To understand the different types of User Acceptance testing and end-to-end testing.			
4.		To get familiarize with the best practices of Testing.			
Course Outcomes					
Upon completion of the course, students shall have ability to					
C402.1		Plan and apply the appropriate level of testing within the context of a software development application to the satisfaction of its beneficiaries.			[AP]
C402.2		Analyze specific and measurable test cases to ensure coverage and traceability to requirements			[A]
C402.3		Understand the problem of reporting techniques, metrics, and testing status reports and communicate testing results to colleagues, managers, and end users.			[U]
C402.4		Apply testing models, processes and practices appropriate for the software development lifecycle model of a project			[AP]
C402.5		Apply principles and practices of test-driven development to improve testing quality and reduce delivery times			[AP]
C402.6		Inspect the various testing processes towards the continuous delivery of a software product.			[A]
Course Contents:					
Module 1		15			
What is Software Testing, Why Software Testing, Benefits of Software Testing, Software Test Levels, Unit Testing, Integration Testing, System Testing, Acceptance Testing, Software Test Types, Functional testing, Non-functional testing, Change Related Testing. Test Scenario Design - Functional and non-functional test scenarios, identify and write business critical scenarios. Test Case Design - pre-requisites, test steps and expected results for test cases, Positive and negative testcases for each scenario, Test case prioritization, Test case optimization technique. RTM, DSR. Classes and Objects, Inheritance, and Polymorphism. Exception Handling, Collections, and, Collections(List), JDBC Connectivity, Creating CURD OPERATION JDBC Connectivity.					
Module 2		15			
Selenium webdriver - Maven Configuration, WebDriver Commands, Navigation Command, Selenium locators - Selenium Locators Basics (id, name),Xpath and css locators, Selenium WebElement - Handling of Form Elements, Synchronization Methods, Selenium Exceptions, Keyboard and mouse handling, Alert handling, Iframe Handling in Selenium, Java Script Execution, Handling WebTable and calendar. Introduction to TestNG - TestNg Introduction, Advantage of testNg , testNG Annotations, Test data preparation, Generation of TestNG Reports, Implicit wait and Explicit wait..					
Module 3		15			
Testing Frameworks - Data driven testing using Apache POI, POM. Extent Reports - HTML Report Generation using Extent Reports. Attaching Screenshot in HTML Report.					

Log4j - configuring log4j Property files, Log4j - parameters for Properties file, Log levels and logging using log4j, Hybrid framework implementation., Creating the POM with a Hybrid framework folder structure, Implementing the Hybrid framework in POM.

Total Hours | 45

Lab Component:

1. Develop a program to automate the login process for a specified webpage using Selenium.
2. Write an automation script using Selenium to handle form elements on a given website.
3. Create an automation script with Selenium to interact with specific web elements on a designated webpage.
4. Implement automation scripts using TestNG, prioritizing different test cases for efficient testing on a given website.
5. Develop automation scripts with TestNG, incorporating seven levels of logging for detailed analysis while testing a specified website.
6. Execute application tests using designed test cases and generate an HTML report for a comprehensive overview.
7. Design and implement a hybrid framework for a ticket booking system, along with associated test cases.
8. Develop a hybrid framework and associated test cases for a hotel room booking system.
9. Design and develop a hybrid framework and relevant test cases for a hospital appointment application.
10. Implement a hybrid framework and associated test cases for an e-commerce application.
11. Develop a hybrid framework and design test cases for comprehensive testing of an insurance website.

Total Hours | 45

SEMESTER – V

22CY501		INTERNET SECURITY		3/0/0/3	
Nature of Course		E (Theory Skill based)			
Pre requisites		Nil			
Course Objectives:					
1.	To Identify common vulnerabilities and attacks at each layer, and explore corresponding countermeasures				
2.	To learn the principles and applications of cryptography, including secret-key encryption (DES, AES), public-key encryption (RSA), and elliptic curve cryptography.				
3.	To understand techniques for bypassing firewalls and ensure secure data transmission through protocols like TLS/SSL.				
4.	To understand the principles of transport layer security, including TLS programming				
5.	Explore security challenges and solutions in wireless networks.				
Course Outcomes:					
Upon completion of the course, students shall have ability to:					
C501.1	Understand the core fundamentals of system security				[U]
C501.2	Implement various networking protocols				[A]
C501.3	Apply security principles to System design				[AP]
C501.4	Develop cryptographic algorithms for internet security.				[AP]
C501.5	Protect any network from the threats in the world.				[A]
Course Contents:					
Module 1: Introduction and Overview of Internet Security					15 Hours
Introduction and Overview - Internet Architecture - How the Internet works (high-level overview) - IP Address - TCP/IP Protocols, Vulnerabilities, Attacks and Countermeasures – Physical Layer: jamming attacks - Data Link Layer: ARP protocol and ARP cache poisoning - Network Layer: IP protocols, packet sniffing, IP Spoofing, IP fragmentation attacks - Network Layer: ICMP protocol and ICMP misbehaviors -Network Layer: IP Routing protocols and Attacks - Transport Layer: TCP protocol, TCP session hijacking, reset and SYN flooding attacks.					
Module 2: Cryptography Basics and Applications					15 Hours
Secret-Key Encryption, Data Encryption Standard (DES), Advanced Encryption Standard (AES) – Elliptic Curve Cryptography - One-way Hash Functions, Message Digest Method 5 (MD5), SHA-1, and SHA-2 - Length extension attacks – Key Exchange Protocols - Public-Key Encryption, RSA - Digital Signatures. Case Studies: Analysis of an Electronic Voting System.					
MODULE 3: Network Security Mechanisms					15 Hours
IP Tunneling and SSH Tunneling - Virtual Private Networks – Firewalls - Bypassing firewalls - Transport Layer Security (TLS/SSL) - TLS Programming - Electronic Mail Security: PGP, S/MIME - Trusted Systems - Wireless Security - Common Criteria for Information Technology Security Evaluation.					
					Total Hours
					45

22CY502		CLOUD SECURITY	3/0/0/3
Nature of Course:		(Theory, Analytical)	
Prerequisites:		Network security and cryptography and cloud computing	
Course Objectives:			
1.	Understand the importance of security in Cloud Computing.		
2.	Understand the cloud security and privacy issues		
3.	Understand the Threat Model and Cloud Attacks		
4.	Understand the Data Security and Storage		
5.	Analyze Security Management in the Cloud.		
Course Outcomes:			
Upon completion of the course, students shall have ability to:			
C502.1	Appreciate the importance of security in a cloud environment		[U]
C502.2	Distinguish the various cloud security and privacy issues.		[U]
C502.3	Analyze the various threats and Attack tools		[A]
C502.4	Able to understand the Data Security and Storage		[U]
C502.5	Analyze the Security Management in the Cloud.		[A]
Course Contents:			
Module I:		15	
Importance of Cloud Security: Security Concepts in Cloud, Confidentiality, privacy, integrity, authentication, Defense in depth, least privilege, Importance of Security in PaaS, IaaS , SaaS, TaaS User authentication in the cloud, Cryptographic Systems, Symmetric cryptography, stream ciphers, block ciphers, modes of operation Multi-Tenancy issues, X.509 certificates, OpenSSL			
Module II		15	
Cloud Security and Privacy Issues			
Introduction, Cloud Security Goals/Concepts, Cloud Security Issues, Security Requirements for Privacy Privacy Issues in Cloud. Infrastructure Security: The Network Level, the Host Level, the Application Level SaaS Application Security, PaaS Application Security, IaaS Application Security.			
Module III		15	
Threat Model and Cloud Attacks			
Introduction, Threat Model- Type of attack entities, Attack surfaces with attack scenarios, A Taxonomy of Attacks, Attack Tools-Network-level attack tools, VMlevel attack tools, VMM attack tools, Security Tools VMM security tools. Security Management in the Cloud- Security Management Standards, Availability Management, Access Control, Security Vulnerability, Patch, and Configuration Management.			
Total Hours			45
Text Books:

22CY503		PYTHON FOR DATA ANALYSIS		3/0/0/3
Nature of Course		F (Theory and Programming)		
Prerequisite		Nil		
Course Objectives:				
1	To understand Python script using types and expressions.			
2	To understand the concepts of expressions and statements for data science.			
3	To utilize high level data types such as lists and dictionaries.			
4	To import and utilize a module and to perform read & write operations on files.			
5	To use the latest python libraries for data science in real time paradigms.			
Course Outcomes:				
Upon completion of the course, students shall have ability to:				
C503.1	Understand python fundamentals including syntax, variables, data types, and control structures.			[U]
C503.2	Articulate essential Python libraries for data science, such as NumPy, Pandas, Matplotlib, Seaborn, and Jupyter.			[AP]
C503.3	Understand the skills to perform exploratory data analysis, apply statistical methods, and visualize data using libraries like Matplotlib and Seaborn.			[U]
C503.4	Apply fundamentals of machine learning concepts and algorithms through libraries such as Scikit-learn and TensorFlow.			[AP]
C503.5	Analyze various tools for data visualization and image classification tasks, fostering the ability to tackle diverse data science challenges with confidence.			[A]
Course Contents:				
Module I:				15
Python Essentials and Data Feature Engagement:				
Python Programming Introduction, Syntax, Comments, Variable, Data Types, Python String, Python Operators List /Tuple /Sets /Dictionaries If else/For Loop Functions, Python Data Cleaning /Missing Value / Fill-na Values/Replace Value, Notation, Data Feature Engagement: Handling the Categorical Data, Data Validation, Removing Col. Raw Data.				
Module II:				15
Data Science				
Python for Data Science-The numpy Module- The Pandas Module-The Jupyter module- Applied Statistics in Python-The pandas Module-Visualization. Case Study: Experiments using Tableau.				
Module III:				15
Python tools for Data Science:				
Seaborn - Visualizing Distributions- Exploring Relationships- Scikit-learn - Linear Regression- Classification- TensorFlow- Basic Neural Network- Training a Model- Image Classification.				
				Total Hours: 45
Text Books:

22CY504	PYTHON FOR DATA ANALYSIS LABORATORY		0/0/3/1.5
Nature of Course		L (Programming)	
Course Objectives:			
1	To understand Python script using types and expressions.		
2	To understand the expressions, statements and the concept of assignment semantics.		
3	To utilize high level data types such as lists and dictionaries.		
4	To import and utilize a module and to perform read & write operations on files.		
5	To work with Pandas, Matplotlib and turtle.		
Course Outcomes:			
Upon completion of the course, students shall have ability to			
C504.1	Understand fundamental operations such as creation, indexing, slicing, concatenation, and repetition on Python built-in data type.		[U]
C504.2	Apply methods to solve diverse problems, showcasing their ability to select and implement appropriate data structures and algorithms to address given tasks efficiently.		[AP]
C504.3	Apply numerical operations proficiently using math and random number functions,		[AP]
C504.4	Apply user-defined functions with various types of function arguments.		[AP]
C504.5	Analyze data analysis and visualization using NumPy and Pandas libraries..		[A]
List Of Experiments:			
1.	Perform Creation, indexing, slicing, concatenation and repetition operations on python built-in data types: Strings, List, Tuples, Dictionary, Set.		
2.	Apply Python built-in data types: Strings, List, Tuples, Dictionary, Set and their methods to solve any given problem.		
3.	Handle numerical operations using math and random number functions		
4.	Create user-defined functions with different types of function arguments.		
5.	Create NumPy arrays from Python Data Structures, Intrinsic NumPy objects and Random Functions.		
6.	Manipulation of NumPy arrays- Indexing, Slicing, Reshaping, Joining and Splitting.		
7.	Load an image file and do crop and flip operation using NumPy Indexing		
8.	Create Pandas Series and Data Frame from various inputs.		
9.	Import any CSV file to Pandas Data Frame and perform the following: a) Visualize the first and last 10 records b) Get the shape, index and column details c) Select/Delete the records (rows)/columns based on conditions. d) Perform ranking and sorting operations. e) Do required statistical operations on the given columns. f) Find the count and uniqueness of the given categorical values. g) Rename single/multiple columns.		
10.	Import any CSV file to Pandas Data Frame and perform the following: a) Handle missing data by detecting and dropping/ filling missing values. b) Transform data using apply () and map() method. c) Detect and filter outliers. d) Perform Vectorized String operations on Pandas Series.		

e) Visualize data using Line Plots, Bar Plots, Histograms, Density Plots

22CY505		CLOUD SECURITY LABORATORY		0/0/3/1.5
Nature of Course		L (Programming)		
Pre requisites		Python Essentials		
Course Objectives:				
1	To install the virtual box/VMware.			
2	To develop web applications in cloud.			
3	To learn the design and development process involved in creating a cloud-based application..			
4	To transfer files from one virtual machine to another..			
5	To learn to implement and use parallel programming using Hadoop.			
Lis Of Experiments:				
1.	Install Virtual box/VMware Workstation with different flavours of linux or windows OS on top of windows7 or 8			
2.	Install a C compiler in the virtual machine created using virtual box and execute Simple Programs			
3.	Install Google App Engine. Create hello world app and other simple web applications using python/java			
4.	Use GAE launcher to launch the web applications			
5.	Simulate a cloud scenario using CloudSim and run a scheduling algorithm that is not present in CloudSim			
6.	Find a procedure to transfer the files from one virtual machine to another virtual machine			
7.	Find a procedure to launch virtual machine using trystack (Online Openstack Demo Version)			
8.	Install Hadoop single node cluster and run simple applications like word count.

SEMESTER VI

22CY602	SECURITY POLICIES AND ITS APPLICATIONS		3/0/0/3
Nature of Course	F (Theory Programming)		
Pre requisites	Nil		
Course Objectives:			
1.	To gain knowledge of Security Policy Frameworks		
2.	To identify potential security threats and vulnerabilities and security problems in current software issues		
3.	To describe security policies to address evolving challenges and technological advancements.		
4.	To examine the importance of documentation for policy implementation and enforcement.		
5.	To be able to implement the best practices of software security Policies.		

Course Contents:**Module I: Need of IT Security Policy Frameworks:****15**

Introduction to Information Systems Security, Information Assurance, Governance, Information Systems Security Policies, Creating Policies, The Seven Domains of IT Infrastructure, Security Policies mitigate within the Seven Domains. **Information Security Policy Implementation Issues:** The role of Human Resources Policies, Policy Roles, Responsibilities and accountability.

Module II: Types of Policies and Appropriate Frameworks:**15**

Introduction, Program Framework Policy, Information Assurance Considerations, Information Systems Security Considerations. **User Domain Policies:** The weakest Link in the information Security Chain, Seven Types of Users, Acceptable Use policy (AUP), The Privileged Level Access Agreement (PAA), Security Awareness Policy (SAP). **IT Infrastructure Security Policies:** Workstation Domain Policy, LAN Domain Policies, LAN –to-WAN Domain Policies, WAN Domain Policies, Remote Access Domain Policies, System/Application Domain Policies, Telecommunication Domain Policies, Cloud Security Domain Policies. **Data Classification and Handling Policies and Risk Management Policies:** Data Classification Policies, Data Handling Policies, Risk Assessment Policies. **Incident Response Team (IRT) Policies:** Introduction, Business Impact Analysis (BIA) Policies, Procedures for Incident Response, Disaster Recovery Plan Policies.

Module III: Implementing and Maintaining an IT Security Policy Framework:**15**

IT Security Policy Implementations – Target state, Executive Buy-in, Cost and Impact, policy language, Employee Awareness and Training, Information Dissemination, Policy Implementation Issues, Governance and Monitoring. **IT Security Policy Enforcement:** Organizational Support for IT Security Policy Enforcement, An Organizational Right to Monitor User Actions and Traffic, Legal Implications of IT Security Policy Enforcement. **IT Policy Compliance and Compliance Technologies:** Creating a Baseline Definition for Information Systems Security, Automated IT SecurityPolicy Compliance, Compliance Technologies and Solutions.

Total Hours**45****Text Books:**

1. Robert Johnson, Chuck Easttom, "Security Policies and Implementation Issues", 3rd Edition, Jones & Bartlett Learning, 2022.

22CY603		ENGINEERING SECURE SOFTWARE SYSTEMS		3/0/0/3
Nature of Course		H (Theory Technology)		
Pre requisites		Nil		
Course Objectives:				
1.	To know the importance and need for software security			
2.	To know about various attacks			
3.	To Learn about secure software design.			
4.	To understand risk management in secure software development.			
5.	To Know the working of tools related to software security.			
Course Outcomes				
Upon completion of the course, students shall have ability to				
C603.1	Identify various vulnerabilities related to memory attacks.			[U]
C603.2	Understand security principles in software development.			[U]
C603.3	Interpret the extent of risks.			[AP]
C603.4	Compare selection of testing techniques related to software security.			[A]
C603.5	Criticize tools for securing software.			[A]
Module I: Need of Software Security and Low-Level Attacks				15
Software Assurance and Software Security - Threats to software security - Sources of software insecurity - Benefits of Detecting Software Security - Properties of Secure Software – Memory Based Attacks: Low-Level Attacks Against Heap and Stack - Defense Against Memory - Based Attacks.				
Module II: Secure Software Design				15
Requirements Engineering for secure software - SQUARE process Model - Requirements elicitation and prioritization- Isolating the Effects of Untrusted Executable Content - Stack Inspection – Policy Specification Languages – Vulnerability Trends – Buffer Overflow – Code Injection - Session Hijacking. Secure Design - Threat Modeling and Security Design Principles.				
Module III: Security Risk Management and Security Testing				15
Traditional Software Testing – Comparison - Secure Software Development Life Cycle - Risk Based Security Testing – Prioritizing Security Testing with Threat Modeling – Penetration Testing – Planning and Scoping - Enumeration – Remote Exploitation – Web Application Exploitation - Exploits and Client-Side Attacks – Post Exploitation –Bypassing Firewalls and Avoiding Detection - Tools for Penetration Testing.				
Total Hours				45

22IT701	COMPUTATIONAL BIOLOGY		3/0/0/3
Nature of Course	D (Theory Application)		
Pre requisites	Nil		
Course Objectives:			
1	To familiarize the students with the basic organization of organisms and subsequent building to a living being		
2	To gain insights from varied backgrounds of engineering, computer science, and the life sciences.		
3	To provide basic knowledge on nature inspired computing techniques		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C701.1	Define biological cell structure and its functions.		[R]
C701.2	Demonstrate protein structure and its synthesis.		[U]
C701.3	Summarize different biological databases.		[U]
C701.4	Apply different prediction strategies on biological data.		[AP]
C701.5	Select evolutionary computing and artificial neuro and immune systems.		[AP]
C701.6	Examine swarm intelligence and ant colony optimization techniques.		[A]
Course Contents:			
Module I: Introduction Databases, Tools and Uses			15
Introduction: Methods of Science-Living Organisms: Cells and Cell theory, Cell Structure and Function, Genetic information, protein synthesis, and protein structure, Cell metabolism - Homoeostasis- Cell growth, reproduction, and differentiation. Applications of Bioinformatics, importance of biological databases, Types of biological databases, analysis packages.			
Module II: Biochemistry, Immune System, Predictive methods			15
Biological Diversity-Chemistry of life: chemical bonds-Biochemistry and Human biology- Protein synthesis-Stem cells and Tissue engineering, Nervous system-Immune system- General principles of cell signaling. predictions			
Gene strategies, protein prediction strategies, molecular visualization tools.			
Module III: Nature Inspired Computing Techniques			15
Artificial neural networks :Biological motivation -Design principles ,Scope of artificial neural networks, Current trends and open problems, Evolutionary computing : Biological motivation, Design principles, Scope of evolutionary computing			
,Current trends and open problems Swarm intelligence: biological motivation, basic ant colony optimization algorithm, basic particle swarm optimization algorithm, Scope of swarm intelligence, Current trends and open problems			
Artificial immune systems: Biological motivation, Design principles, Scope of artificial immune systems, Current trends and open problems.

22CY601		HACKER TECHNIQUES TOOLS AND INCIDENT HANDLING		3/0/2/4
Nature of Course:		C (Theory Concept)		
Pre requisites:		Ethical Hacking		
Course Objectives:				
1	To understand Hacker Techniques and Incident Handling			
2	To secure Wireless and Web Networks Against Hacker Tactics			
3	To understand the Defensive Strategies for Linux Penetration Testing and Social Engineering			
Course Outcomes				
Upon completion of the course, students shall have ability to				
C601.1	Interpret the role and significance of Public Key Infrastructure (PKI) in ensuring secure communication.			[U]
C601.2	Evaluate the risks associated with open ports and services on a network and prioritize them based on their potential impact.			[A]
C601.3	Explain the vulnerabilities associated with wireless LANs, including eavesdropping, spoofing, and man-in-the-middle attacks.			[U]
C601.4	Utilize techniques such as SQL injection and cross-site scripting (XSS) to demonstrate vulnerabilities in web servers and web applications.			[AP]
C601.5	Utilize incident response plans and procedures to effectively respond to cybersecurity incidents, including identifying and containing security breaches, preserving evidence, and restoring systems and data.			[AP]
Module – I				15
Exploring Hacker Techniques				
Hacker Techniques Tools and Incident Handling - Ethical Hacking and Penetration Testing – Exploring the OSI Reference Model – Symmetric Encryption – Asymmetric Encryption – Purpose of Public Key Infrastructure – Hashing – Physical Security and its Controls – Port Scanning – Identifying access machines – Mapping open ports – Enumeration and Computer System Hacking				
Module – II				15
Wireless & Web Security: Hacker Tactics				
The importance of wireless security – Securing Bluetooth – Securing Wireless LANs – Threats to Wireless LANs – Wireless Hacking Tools – Protecting Wireless networks – Attacking Web Servers – Examining a SQL Injection – Vandalizing Web Servers – Database Vulnerabilities – Malware – Sniffers, Session Hijacking and Denial of Service Attacks				
Module – III				15
Defensive Strategies: Navigating Linux Penetration Testing and Social Engineering				
Linux Penetration Testing – Social Engineering – Types of Social Engineering attacks – Technology and Social Engineering – Best practices for Passwords – Incident Response and Defensive Technologies – Incident Response Plans – Planning for Disaster Recovery – Evidence Handling and Administration – Intrusion Detection Systems – The purpose of firewalls – Honeypots – The role of Controls – Security Best Practices.				
Total Hours				45
List Of Experiments				
1.	Generate key pairs, encrypt a file using public key, and decrypt using the corresponding private key.			
2.	Utilize hashing libraries such as MD5, SHA-256.			
3.	Scan a network to identify active hosts and open ports, analyze the results, and understand potential vulnerabilities.			
4.	Use enumeration tools like enum4linux, NSE scripts in Nmap.			
5.	Use Wi-Fi access points and tools like Aircrack-ng.			
6.	Configure and secure a wireless network using WPA2, detect and mitigate rogue access points.			
7.	Perform attacks like SQL injection, cross-site scripting (XSS), and understand the impact of vulnerable web applications.			

8.	Analyze malware behavior, identify persistence mechanisms, and understand how malware communicates with command and control servers.
9.	Perform penetration testing on Linux systems, exploit vulnerabilities, and harden the system against attacks.
10.	Simulate social engineering attacks, analyze human vulnerabilities, and develop countermeasures such as security awareness training.
Total Hours 30

SEMESTER – VII

22CY701	ENTERPRISE NETWORKING SECURITY AND AUTOMATION		3/0/0/3
Nature of Course	J (Problem Analytical)		
Pre requisites	Cloud Security		
Course Objectives:			
1	To configure advanced routing and switching protocols.		
2	To resolve common issues with routing and switching protocols and identify threats to enhance network security.		
3	To implement IPv4 Access Control Lists (ACLs).		
4	To configure Network Address Translation (NAT) services.		
5	To explain virtualization, software-defined networking, and automation		
Course Outcomes:			
Upon completion of the course, students shall have ability to:			
C701.1	Explain and apply the configuration procedures for advanced routing and switching protocols.		[AP]
C701.2	Analyse and resolve routing and switching issues while identifying security threats.		[A]
C701.3	Demonstrate the implementation of IPv4 ACLs for network security.		[AP]
C701.4	Configure and verify NAT services to support IPv4 address scalability.		[AP]
C701.5	Explain the concepts of virtualization, software-defined networking, and automation.		[U]
Course Contents:			
MODULE I: SINGLE-AREA OSPFv2 & NETWORK SECURITY			15
OSPF Concepts – Features, Link-State Operation, Packet Types, Neighbor Adjacencies, Database Synchronization, DR/BDR Election, Router ID, Configuration, Network Types, and Verification. OSPF Optimization – Cost Metric Adjustments, Failover, Recovery, and Default Route Propagation. Cybersecurity Basics – Network Attacks, Threat Actors, Reconnaissance, Access Attacks, DoS/DDoS, IP Vulnerabilities, ICMP Attacks, Address Spoofing, TCP/UDP Vulnerabilities. Cryptography & ACLs – Data Confidentiality, Hashing, Encryption, Packet Filtering, Wildcard Masks, ACL Types, Placement, Configuration, and Interface Security.			
MODULE II: NAT, WAN, VPN, QoS, AND NETWORK MANAGEMENT			15
NAT for IPv4 – Characteristics, Address Space, Terminology, Types, NAT64, Advantages, Configuration, and Verification. WAN Concepts – Purpose, Types, Carrier Connections, Operations, Standards, Terminology, Devices, Connectivity Options, and Internet-Based Solutions. VPN and IPsec Concepts – VPN Technology, Benefits, Types, IPsec Protocols, Encryption, Authentication, and Secure Key Exchange. QoS Concepts – Network Performance, Traffic Prioritization, Congestion, Delay, Jitter, Queuing Algorithms, Models, and Implementation. Network Management – Device Discovery, Time Synchronization, SNMP, Syslog, Router & Switch Maintenance, and IOS Image Management.			
MODULE III: NETWORK DESIGN, TROUBLESHOOTING, VIRTUALIZATION & AUTOMATION			15
Network Design – Scalable networks, hierarchical models, redundancy, failure domains, hardware selection. Network Troubleshooting – Documentation, methodologies, tools, and layered diagnostic approaches. Network Virtualization – Cloud computing, virtualization, SDN, controllers, and infrastructure abstraction. Network Automation – Automation fundamentals, data formats, APIs, configuration management, Cisco DNA			

Centre. Case Study – Implementing automation in a virtualized enterprise, analysing scalability, security, and efficiency.

Total Hours: 45

22CY951	MODERN CRYPTOGRAPHY	3/0/0/3
Nature of Course	G (Theory analytical)	
Pre requisites	Nil	

Course Objectives:		
1.	Understand the Modern Cryptography techniques	
2.	Analyze Secret Encryption Mechanisms	
3.	Understand and Implement Pseudorandom Permutations	
4.	Apply Theoretical Constructions of Symmetric-Key Primitives in modern Cryptography	
5.	Integrate Hybrid Encryption Techniques	
Course Outcomes		
Upon completion of the course, students shall have ability to		
C951.1	Apply the basic principles behind cryptographic security, including confidentiality, integrity, and authenticity in real world applications.	[AP]
C951.2	Analyze the strengths and weaknesses of different Secret encryption mechanisms in terms of security, performance, and practical application.	[A]
C951.3	Select appropriate modes of operation to enhance the security and effectiveness of Pseudorandom Permutations in different applications.	[A]
C951.4	Apply Theoretical Constructions of Symmetric-Key Primitives to solve cryptographic problems.	[AP]
C951.5	Apply hybrid encryption techniques to secure real-world communications and data exchanges, and assess their effectiveness in various contexts.	[AP]
Course Contents:		
Module I:		15
Introduction : Classical Cryptography and Modern Cryptography, The Setting of Private-Key Encryption, Historical Ciphers and Their Cryptanalysis, The Basic Principles of Modern Cryptography, Perfectly-Secret Encryption Definitions and Basic Properties, The One-Time Pad (Vernam's Cipher), Limitations of Perfect Secrecy Private-Key Cryptography: PrivateKey Encryption and Pseudorandomness,.		
Module II:		15
Message Integrity -Constructing Secure Message Authentication Codes - CBC-MAC - Collision-Resistant Hash Functions Practical Constructions of Pseudorandom Permutations - Substitution-Permutation Networks, Generic Attacks on Hash Functions - The Random-Oracle Model – Number Theory and Cryptographic Hardness Assumptions, Preliminaries and Basic Group Theory.		
Module III:		15
Public-Key Encryption from Trapdoor Permutations - The Paillier Encryption Scheme - Secret Sharing and Threshold Encryption - The Goldwasser – Micali Encryption Scheme - The Rabin Encryption Scheme.		
		Total Hours
		45

22CY952	SECURITY ARCHITECTURE	3/0/0/3
Nature of Course	F (Theory, Analytical)	
Prerequisite	Nil	

Course Objectives:		
1	Understand the Fundamentals of Software Security Architecture	
2	Identify and Analyze Common Software Attack Methods	
3	Enhance Knowledge of Attack Methods and Learning Approaches	
4	Analyze Typical Problems Encountered in Programs	
5	Apply Chaotic Elements in Program Management	
Course Outcomes:		
Upon completion of the course, students shall have ability to		
C952.1	Demonstrate Understanding of Security Architectures	[AP]
C952.2	Analyze Attack Methods and Their Implications	[A]
C952.3	Apply Learning Methods to Enhance Team Performance	[AP]
C952.4	Analyze the Impact of Late Engagement and Assessment Delays	[A]
C952.5	Apply and Manage Chaotic Elements in Programs	[AP]
Course Contents:		
Module I:		15
Introduction to Security Architecture: Software Security - Architectures of Security - Security Architecture in Software Development - Introducing Attack Methods - Speaking of Defense - Architecture, Attacks, and Defenses - Security Architecture Analyses - Threat Modelling.		
Module II:		15
Culture Hacking: Team Tourism - Culture Hacks - Program to Transformation - Attack Knowledge - The Learning Method - To Accelerate: Cross Pollinate - Build a Community of Practice - Support Learners' Errors - Facilitate as Much as Lead.		
Module III:		15
Problem Areas You Will Encounter: Typical Problems Programs Encounter – Scale - Assessments Take Too Long - Late Engagement - Skill Churn – Exceptions - Fostering Innovation - Dealing with Chaotic Elements - There Are Differences - Translate and Generalize.		
		Total Hours: 45

22CY953		WEB APPLICATION SECURITY		3/0/0/3
Nature of Course		C (Theory)		
Prerequisites		NIL		
Course Objectives:				
1.	To study and practice fundamental techniques to develop secure web applications.			
2.	To identify web applications vulnerabilities and understand vulnerability management.			
3.	To assess web application security attacks and defence.			
4.	To Understand relevant security standards and frameworks, such as OWASP Top Ten, NIST guidelines, and PCI DSS.			
5.	To develop skills for responding to and managing web application security incidents.			
Course Outcomes				
Upon completion of the course, students shall have ability to				
C953.1	Determine security challenges and the need for Authentication and Authorization in webbased systems and applications			[AP]
C953.2	Illustrate the Application Programming Interface analysis and vulnerability management of securing a web-based system			[A]
C953.3	Learn the web application hacking techniques and prevention solutions			[A]
C953.4	Apply the best practices of Secure Credentials, session management, and Security Automation in web applications			[AP]
C953.5	Determine the best strategies to prevent XSS, CSRF, XXE, Injection, DOS attacks and Securing Third-Party Dependencies			[AP]
Course Contents:				
Module 1 – Web Application Reconnaissance				15
Information Gathering - Web Application Mapping - Structure of Modern Web Application: Modern Versus Legacy Web Applications, REST APIs, JavaScript Object Notation, Browser DOM, SPA Frameworks, Authentication and Authorization Systems, Web Servers, ServerSide Databases, Client-Side Data Stores.Sub Domain: Multiple Applications per Domain - Browser's Built-In Network Analysis Tools -Search Engine Caches - Accidental Archives - Social Snapshots - Zone Transfer Attacks - Brute Forcing Subdomains and Dictionary Attacks - Application Programming Interface Analysis(API): Endpoint Discovery and Endpoint Shapes, Authentication Mechanisms				
Module 2 Web Application Vulnerability and Hacking				15
Detecting Client-Side and Server-Side Frameworks - Secure Versus Insecure Architecture Signals - Multiple Layers of Security - Adoption and Reinvention - Common Vulnerabilities and Exposures Database.Cross-Site Scripting (XSS): XSS Discovery and Exploitation, Stored XSS, Reflected XSS, DOM-Based XSS, Mutation-Based XSS - Cross-Site Request Forgery(CSRF): Query Parameter Tampering, CSRF Against POST Endpoints - XML External Entity (XXE): Direct and Indirect XXE				
Module 3 - Web Application Attacks				15

SQL Injection - Code Injection - Command Injection - Denial of Service (DoS): regex DoS (ReDoS), Logical DoS Vulnerabilities, Distributed DoS - Exploiting Third-Party Dependencies. Securing Web Applications: Defensive Software Architecture - Vulnerability Analysis and Management - Secure Sockets Layer and Transport Layer Security - Secure Credentials, Hash Credentials - Secure-Coding Anti-Patterns - Security Automation: static and dynamic analysis - Vulnerability Regression Testing - Bug Bounty Programs	
Total Hours	45

22CY954	MALWARE ANALYSIS		3/0/0/3
Nature of Course		C (Theory)	
Prerequisites		NIL	
Course Objectives:			
1.	To introduce the malware taxonomy and malware analysis tools.		
2.	To identify and analyze malware samples using static, dynamic analysis, and reverse engineering techniques.		
3.	To detect and analyze malicious documents and mobile malware.		
4	To Design and implement effective strategies for detecting, responding to, and recovering from malware incidents		
5	To Discuss the ethical and legal implications of malware research and the responsibilities of cyber security professionals.		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C954.1	Possess the skills to carry out static and dynamic malware analysis on various malware samples.		[A]
C954.2	Understand the executable formats, Windows internals, and APIs.		[A]
C954.3	Apply techniques and concepts to unpack, extract, and decrypt malware.		[AP]
C954.4	Comprehend reverse-engineering of malware and anti-malware analysis techniques.		[A]
C954.5	Achieve proficiency with industry-standard malware analysis tools.		[AP]
Course Contents:			
Module 1 – Static and Dynamic Analysis			15
Malware taxonomy - Malware analysis techniques – Packed and Obfuscated Malware -Portable Executable File Format: Headers and Sections, Malware Analysis in Virtual Machines - Malware Analysis Tools: ProcMon/ ProcExplore, BinText, FileAlyzer, OllyDbg, etc.File signature analysis and Identifying file dependencies - Database of file hashes. String analysis - Local and online malware sandboxing - Levels of Abstraction - x86 Architecture -x86/x86_64 Assembly - Static Analysis Tools: PeiD, Dependency Walker, Resource Hacker.Source level vs. Assembly level Debuggers - Kernel vs. User-Mode Debugging –Exceptions - Modifying Execution with a Debugger - Modifying Program Execution in Practice - DLL analysis - Dynamic Analysis Tools: Virustotal, Malware Sandbox, Windows Sysinternals			
Module 2 Malicious Document Analysis			15
Reverse engineering malicious code - Identifying malware passwords - Bypassing authentication -Advanced malware analysis: Virus, Trojan and APK Analysis - Reverse Engineering Tools: IDA Pro and OLLYDBG.PDF and Microsoft Office document structures – Identify PDF and office document vulnerabilities - Analysis of suspicious websites - Examining malicious documents: word, XL, PDF, and RTF files - Malware extraction and analysis tools			
Module 3 - Mobile Malware Analysis			15

Anti-Disassembly - Anti-Debugging - Anti-Forensic Malware - Packers and Unpacking –Shellcode Analysis - 64-Bit Malware. Mobile application penetration testing - Android and iOS Vulnerabilities - Exploit Prevention - Handheld Exploitation - Android Root Spreading and Distribution Android. Debugging - Machine learning techniques for malware analysis: Support Vector Machine (SVM), K-Nearest Neighbor (KNN), Random Forest (RF), Decision Trees (DT), Naïve Bayes (NB), and Neural Networks (NN).

22CY955	STEGANOGRAPHY AND DIGITAL WATERMARKING		3/0/0/3
Nature of Course		C (Theory)	
Prerequisites		NIL	
Course Objectives:			
1.	To understand the basic principles, characteristics, and methods of steganography.		
2.	To understand the various approaches and applications of digital watermarking		
3.	To apply digital watermarking techniques as an authentication tool for distribution of content over the net and steganography techniques for covert communication		
4.	To Discuss the ethical implications and legal considerations related to information hiding technologies.		
5.	To Explore real-world applications of steganography and digital watermarking in areas such as copyright protection, secure communications, and digital forensics		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C955.1	Analyze the various concepts of steganography to access the sensitive information concealing of message, image, audio or video within another file		[A]
C955.2	Illustrate the fundamental concepts, principles and characteristics of digital watermarking		[A]
C955.3	Explain the performance measures of digital watermarking and steganography		[A]
C955.4	Correlate the various concepts of watermarking for digital authentication		[A]
C955.5	Implement the authorization schemes related to electronic documents, image and video		[AP]
Course Contents:			
Module 1 – Audio and Video Steganography			15
Basics and Importance of Steganography - Applications and Properties of Steganography -Steganography: embedding, Steganography in palette images -Steganography in JPEG images: JSteg data hiding in spatial transform domain -Steganography Security.Audio Steganography: Temporal domain techniques, Transform domain techniques, Cepstral Domain - Video Steganography: Introduction Video Streams, Substitution-Based techniques, Transform Domain Techniques, Adaptive Techniques, Format-Based Techniques - Cover Generation techniques Video Quality Metrics - Perceptual Transparency Analysis - Robustness against Compression and Manipulation.			
Module 2 Digital Watermarking Schemes			15
Importance of Watermarking - Application and Properties of Watermarking - Models of Watermarking - Basic message Coding: Mapping Message into Message Vectors, Error Correction Coding - Watermarking with Side Information - Analyzing Errors.Spatial Domain: Correlation based Watermarking, Least Significant bit Watermarking frequency domain: Discrete Wavelet Transform Watermarking, Discrete Fourier Transform Watermarking, Discrete sine Watermarking,			
Module 3 - Digital Watermarking Security and Authentication			15
Quantization Watermarking, Haar Transform Watermarking, Hadamard Transform Watermarking - Robust watermarking - Fragile and Semi Fragile Watermarking ,Watermarking Security: Security Requirements, Watermark			

urity and Cryptography, Watermarking Attacks and Tools - Content Authentication: Exact Authentication, ctive Authentication, Localization, Restoration.

22CY956	SOCIAL NETWORK SECURITY CONCEPTS	3/0/0/3

Nature of Course		E (Theory Skill based)
Pre requisites		Nil
Course Objectives:		
1.	Understand key concepts of Semantic Web and Social Network Analysis.	
2.	Explore methods for community detection and privacy in social networks.	
3.	Learn access control strategies and identity management in social platforms.	
4.	Examine big data, privacy, and user data management in online communities.	
5.	Apply tools for network modeling and security management.	
Course Outcomes		
Upon completion of the course, students shall have ability to		
C956.1	Understand the basics of Semantic Web, Social Network Analysis, and privacy/security concerns.	[U]
C956.2	Apply community detection and privacy protection techniques.	[AP]
C956.3	Implement access control strategies and identity management in social networks.	[AP]
C956.4	Analyze big data and privacy issues in social platforms.	[A]
C956.5	Apply tools like Neo4j for network modeling and enforcing security.	[AP]
Course Contents:		
Module 1: Foundations of Semantic and Social Network Security		15
Introduction to Semantic Web, Limitations of current Web, Development of Semantic Web, Emergence of the Social Web, Social Network analysis, Development of Social Network Analysis, Key concepts and measures in network analysis, Historical overview of privacy and security, Major paradigms, for understanding privacy and security. The evolution of privacy and security concerns with networked technologies, Contextual influences on privacy attitudes and behaviors, Anonymity in a networked world.		
Module 2: Community Detection and Privacy in Social Networks		15
Extracting evolution of Web Community from a Series of Web Archive, Detecting communities in social networks, Definition of community, Evaluating communities, Methods for community detection and mining, Applications of community mining algorithms, Tools for detecting communities social network infrastructures and communities, Big data and Privacy. Understanding and predicting human behavior for social communities, User data Management, Inference and Distribution, Enabling new human experiences, Reality mining, Context, Awareness, Privacy in online social networks, Trust in online environment, What is Neo4j, Nodes, Relationships, Properties.		
Module 3: Access Control and Identity Management in Social Networks		15
Understand the access control requirements for Social Network, Enforcing Access Control Strategies,		

Authentication and Authorization, Roles-based Access Control, Host, storage and network access control options, Firewalls, Authentication, and Authorization in Social Network, Identity & Access Management, Single Sign-on, Identity Federation, Identity providers and service consumers, The role of Identity provisioning.

Total Hours **45**

22CY957	DATA ENCRYPTION	3/0/0/3
Nature of Course	E (Theory Skill based)	
Pre requisites	Basic knowledge of computer networks and cryptography.	

Course Objectives:		
1.	Understand the fundamental concepts of data encryption techniques and algorithms.	
2.	Learn how to design and implement basic encryption mechanisms for securing data.	
3.	Analyze the strengths and weaknesses of various encryption algorithms.	
4.	Develop teamwork and communication skills through encryption-based projects.	
5.	Address the ethical and security challenges associated with data encryption and privacy.	
Course Outcomes		
Upon completion of the course, students shall have ability to		
C957.1	Understand the key encryption techniques and their role in data security.	[U]
C957.2	Apply symmetric and asymmetric encryption methods to secure data.	[AP]
C957.3	Analyze the computational performance of various encryption algorithms.	[A]
C957.4	Implement encryption-based security systems for different data applications.	[AP]
C957.5	Analyze security risks in data systems and recommend suitable encryption solutions.	[A]
Course Contents:		
Module 1: Introduction to Data Encryption		15
Introduction to cryptography- Importance of data encryption in securing information- Symmetric and asymmetric encryption overview- Key concepts: plaintext, ciphertext, encryption, decryption- Historical encryption techniques (Caesar cipher, Vigenère cipher)-- Modern encryption standards: DES, AES- Difference between encryption and hashing- Encryption applications in data security- Role of encryption in authentication-Public key infrastructure (PKI) basics- Real-world examples of encryption use (e.g., SSL/TLS)- Overview of encryption laws and regulations.		
Module 2: Symmetric Key Encryption		15
Introduction to symmetric key encryption- Block ciphers vs. stream ciphers- DES (Data Encryption Standard): structure and working- AES (Advanced Encryption Standard): structure and working- Blowfish algorithm: features and working- Feistel cipher structure- Modes of operation: ECB (Electronic Codebook)- Modes of operation: CBC (Cipher Block Chaining)- Modes of operation: CFB (Cipher Feedback)- Modes of operation: OFB (Output Feedback)- Key management challenges in symmetric encryption- Symmetric encryption in real-world applications.		
MODULE 3: Asymmetric Key Encryption		15
Introduction to asymmetric encryption- Public key vs. private key- RSA algorithm: structure and working- Diffie-Hellman key exchange- Elliptic Curve Cryptography (ECC): basics and importance- Key generation in asymmetric encryption- Digital signatures: concept and applications- SSL/TLS encryption: working and importance- Public Key Infrastructure (PKI) in asymmetric encryption- Key management and distribution challenges- Asymmetric encryption in securing emails (PGP, S/MIME)- Asymmetric encryption for secure online transactions.

2CY958	BIOMETRIC SECURITY	3/0/0/3
Nature of Course	E (Theory Skill based)	
Pre requisites	Nil	
Course Objectives:		
1.	Understand the fundamental principles of biometric systems, including physical, biological, and	

	engineering aspects.
2.	Apply knowledge to design and implement basic biometric system applications.
3.	Analyze biometric components to assess and improve system performance.
4.	Develop teamwork and communication skills for collaborative biometric projects.
5.	Identify and address ethical, sociological, and security challenges in biometric systems design and deployment.

Course Outcomes**Upon completion of the course, students shall have ability to**

C958.1	Understand the key biometric terms, processes, and matching methods, and their role in the functioning of biometric systems.	[U]
C958.2	Apply knowledge of biometric systems at the component level to design and implement basic biometric system applications.	[AP]
C958.3	Apply physiological biometrics to assess their features and effectively deploy them in biometric systems.	[AP]
C958.4	Analyze the sociological, ethical, and acceptance issues associated with the design and implementation of biometric systems.	[A]
C958.5	Apply knowledge of security issues and challenges in biometric systems to design secure and resilient biometric solutions.	[AP]

Course Contents:**Module 1: Introduction to Biometrics****15**

Biometrics- Introduction- benefits of biometrics over traditional authentication systems -benefits of biometrics in identification systems-selecting a biometric for a system –Applications - Key biometric terms and processes - biometric matching methods -Accuracy in biometric systems.

Module 2: Physiological Biometric Technologies**15**

Physiological Biometric Technologies: Fingerprints - Technical description –characteristics - Competing technologies - strengths – weaknesses – deployment - Facial scan - Technical description - characteristics - weaknesses-deployment - Iris scan - Technical description – characteristics - strengths – weaknesses – deployment - Retina vascular pattern. Technical description – characteristics - strengths – weaknesses – deployment - Hand scan - Technical description-characteristics - strengths – weaknesses deployment – DNA biometrics. Behavioral Biometric Technologies: Handprint Biometrics - DNA Biometrics.

MODULE 3: Behavioral Biometrics: Signature, Handwriting, and Voice Recognition**15**

signature and handwriting technology - Technical description – classification – keyboard / keystroke dynamics- Voice – data acquisition - feature extraction - characteristics - strengths – weaknesses-deployment. Multi biometrics and multi factor biometrics - two-factor authentication with passwords - tickets and tokens – executive decision - implementation plan.

22CY959		SECURITY ASSESSMENT AND RISK ANALYSIS		3/0/0/3
Nature of Course		E (Theory Skill based)		
Pre requisites		Nil		
Course Objectives:				
1.	Understand secure software design principles and architecture.			
2.	Apply risk management strategies to mitigate software security risks.			

3.	Learn cryptographic methods and authentication models in enterprise systems.
4.	Analyze security challenges in enterprise systems, including e-commerce platforms.
5.	Develop skills for security testing and quality assurance.

Course Outcomes**Upon completion of the course, students shall have ability to**

C959.1	Understand principles of secure software design and architecture.	[U]
C959.2	Apply risk management frameworks to address software security risks.	[AP]
C959.3	Implement cryptographic techniques and authentication models.	[AP]
C959.4	Analyze security architectures and identify vulnerabilities.	[A]
C959.5	Apply security testing to analyze and ensure software reliability.	[AP]

Course Contents:**Module 1: Secure Software Design and Architecture****15**

Defining computer security, the principles of secure software, trusted computing base, etc, threat modeling, advanced techniques for mapping security requirements into design specifications. Secure software implementation, deployment and ongoing management. Software design and an introduction to hierarchical design representations. Difference between high-level and detailed design. Handling security with high-level design. General Design Notions. Security concerns design at multiple levels of abstraction, Design patterns, quality assurance activities and strategies that support early vulnerability detection, Trust models, security Architecture & design reviews.

Module 2: Software Assurance and Risk Management**15**

Software Assurance Model: Identify project security risks & selecting risk management strategies, Risk Management Framework, Security Best practices/ Known Security Flaws, Architectural risk analysis, Security Testing & Reliability (Penn testing, Risk Based Security Testing).

MODULE 3: Enterprise Software Security and Cryptography**15**

Software Security in Enterprise Business: Identification and authentication, Enterprise Information Security, Symmetric and asymmetric cryptography, including public key cryptography, data encryption standard (DES), advanced encryption standard (AES), algorithms for hashes and message digests. Authentication, authentication schemes, access control models, Kerberos protocol, public key infrastructure (PKI), protocols specially designed for e-commerce and web applications, firewalls and VPNs. Security development frameworks. Security issues associated with the development and deployment of information systems, including Internet-based e-commerce, e-business, and e-service systems.

22CY961		MACHINE LEARNING FOR DIGITAL FORENSICS		3/0/0/3
Nature of Course:		H (Theory)		
Prerequisites:		Nil		
Course Objectives:				
1.	To Apply the fundamentals of Machine Learning Techniques			
2.	To Apply dimensionality reduction, classification, and clustering techniques			
3.	To Distinguish among supervised, unsupervised, and reinforcement learning by comparing their			

	methodologies, objectives, and applications.	
4.	To Analyze digital forensic investigations using machine learning	
5.	To Understand the phases of the digital forensics process	
Course Outcomes: Upon completion of the course, students shall have ability to:		
C961.1	Apply machine learning techniques to real-world problems, illustrating their practical use in areas such as computer vision and natural language processing.	[AP]
C961.2	Apply dimensionality reduction techniques and classification algorithms to real-world datasets, demonstrating their understanding of these methods.	[AP]
C961.3	Analyze different machine learning models and interpret their performance metrics, distinguishing between the effectiveness of supervised and unsupervised learning approaches in various contexts.	[A]
C961.4	Analyze the phases of the digital forensics process, from identification to presentation, and interpret the role of digital evidence in forensic investigations. .	[A]
C961.5	Apply machine learning techniques for data analysis in digital forensics, such as malware detection and social media forensics, and evaluate their effectiveness in enhancing investigative processes.	[AP]
Course Contents: Module 1: Introduction to Machine Learning and Its Applications 15 Brief Introduction to Machine Learning Well, Applications of Machine Learning, Perspective and Issues in Machine Learning, Concept Learning; Types of Machine Learning - Supervised Learning, Unsupervised Learning, Reinforcement Learning. Applications of Machine Learning in Natural Language Processing, Image & Video Processing and Analysis, Computer Vision, Financial Data Processing and Social Network Analysis Module 2: Dimensionality Reduction, Classification, and Clustering 15 Dimensionality Reduction Subset Selection, Shrinkage Methods, Principle Components Regression; Linear Classification, Logistic Regression, Linear Discriminant Analysis; Optimization, Classification-Separating Hyperplanes Classification. Supervised and Unsupervised Learning Naive Bayes Classification: Fitting Multivariate Bernoulli Distribution, Gaussian Distribution and Multinomial Distribution, K-Nearest Neighbors, Decision Trees. Module 3: introduction to digital forensics 15 Forensic Science – Digital Forensics – Digital Evidence – The Digital Forensics Process -Introduction – The Identification Phase – The Collection Phase – The Examination Phase – The Analysis Phase – The Presentation Phase.Data analysis using machine learning for forensic expert, social media and machine learning, malware analysis using ML, HIDS, NIPS based analysis

22CY962		MULTIMEDIA FORENSICS		3/0/0/3	
Nature of Course		H (Theory)			
Pre requisites		Nil			
Course Objectives:					
1.		To Understand the fundamental concepts of multimedia forensics			
2.		To Apply various techniques for detecting and analyzing digital forgeries in multimedia.			
3.		To Apply skills in using forensic tools for multimedia analysis			
4.		To Understand the legal and Ethical Standards in Multimedia			
5.		To Analyze case studies to understand real-world applications of multimedia forensics			
Course Outcomes					
Upon completion of the course, students shall have ability to					
C962.1		Understand the fundamental concepts of multimedia forensics, and explain their importance and applications in areas like law enforcement and cybersecurity.			[U]
C962.2		Analyze different multimedia content to identify forgery detection techniques, such as copy-move, splicing, and tampering detection, using both passive and active approaches.			[A]
C962.3		Apply forensic tools for image, audio, and video analysis and demonstrate their practical skills in detecting forgery and tampering across different multimedia formats.			[AP]
C962.4		Apply legal frameworks, ethical standards, and forensic guidelines to multimedia forensics, and demonstrate how these factors influence forensic investigations and expert testimony in real-world cases.			[AP]
C962.5		Analyze real-world forensic cases and synthesize appropriate forensic methodologies, demonstrating critical thinking and problem-solving skills in multimedia forensic investigations.			[A]
Course Contents:					
Module 1 - Introduction to Multimedia Forensics and Image Forgery Detection Techniques					15
Overview of digital forensics - Introduction to multimedia forensics - Importance and applications in law enforcement, cybersecurity, etc. - Image representation and formats - Image acquisition and processing - Metadata analysis - Passive and active approaches - Copy-move forgery detection - Splicing and re-compression detection - Practical session: Using tools for image forgery detection					
Module 2 – Audio and Video Forensics					15
Introduction to audio forensics - Audio authentication and tampering detection - Voice identification and speaker recognition - Practical session: Audio forensic analysis tools - Fundamentals of video processing - Video tampering detection techniques - Frame-based and block-based analysis - practical session: Video forensic tools					
Module 3 - Legal and Ethical Aspects of Multimedia Forensics and its Case Studies					15
Understanding legal frameworks and standards - Ethical considerations in forensic analysis - Expert witness testimony in multimedia forensics - Analysis of real-world forensic cases - Discussion of methodologies and challenges - Practical session: Forensic analysis of case study multimedia content

22CY963	SOCIAL MEDIA FORENSICS	3/0/0/3

Nature of Course:	H (Theory)		
Pre requisites:	Nil		
Course Objectives:			
1	To describe the Role and Relevance of social media in Digital Forensic Investigations		
2	To Identify Data Protection Considerations in Social Media Forensics		
3	To Apply Techniques for Content Analysis, Sentiment Mining, and Misinformation Detection		
4	To Apply Social Media Evidence Using Browser-Based Methods		
5	To Analyze Criminal Activities and Cybercrimes on Social Media Platforms		
Course Outcomes:			
Upon completion of the course, students shall have ability to			
C963.1	Apply knowledge of social media’s role and significance in digital forensic investigations by implementing its applications and utilizing its relevance for gathering evidence effectively.		[AP]
C963.2	Understand the Legal, Ethical, and Data Protection Considerations in Social Media Forensics		[U]
C963.3	Apply advanced techniques for content analysis and misinformation detection to effectively implement and utilize strategies in identifying false information.		[AP]
C963.4	Apply browser-based methods to implement and utilize techniques for extracting social media evidence effectively.		[AP]
C963.5	Analyze cybercrimes and criminal activities occurring on social media platforms to evaluate patterns, assess risks, and identify potential threats.		[A]
Course Contents:			
Module 1: Introduction to Social Media Forensics and Digital Evidence			15
Overview of social media platforms (Facebook, Twitter, Instagram, LinkedIn, etc.) - Role of social media in modern digital forensics investigations - Case studies: How social media has been used in criminal investigations - Legal considerations for collecting evidence from social media - Privacy issues and data protection laws (e.g., GDPR, CCPA) - Ethical guidelines for investigators - Types of digital evidence on social media (posts, images, videos, metadata) - Social media data retention policies - Chain of custody for digital evidence			
Module 2: Investigative Techniques and Forensic Analysis			15
Browser-based methods for capturing social media evidence - Understanding metadata in social media files (photos, videos) - Extracting and analyzing metadata for geolocation and timestamps - Techniques for analyzing textual and visual content from social media - Sentiment analysis and language processing for social media posts - Identifying fake news, misinformation, and deepfakes			
Module 3: Advanced Topics in Social Media Forensics			15
Investigating organized criminal activities and cyberbullying - Investigating cybercrimes (cyberstalking,			

harassment, and fraud) on social media - Role of social media forensics in corporate investigations - Challenges with end-to-end encryption on social platforms

Total Hours | **45**

22CY964	NETWORK FORENSICS												3/0/0/3		
Nature of Course		H (Theory)													

Pre requisites		Nil
Course Objectives:		
1.	To Understand the basics of forensic investigation and its procedure	
2.	To Understand the packet capturing and Analysis Techniques	
3.	To Apply Knowledge in location awareness and types of Logs	
4.	To Analyze the network intrusions detection systems and Alerting	
5.	To Understand the types of scanning Techniques	
Course Outcomes		
Upon completion of the course, students shall have ability to		
C964.1	Gain a fundamental understanding of forensic investigation and its procedures	[U]
C964.2	Identify potential security threats, anomalies, and malicious activities through packet analysis techniques.	[AP]
C964.3	Demonstrate the ability to utilize and apply various types of logs, including system logs, network logs, and application logs.	[AP]
C964.4	Analysis of intrusion detection systems (IDS) to evaluate their effectiveness in identifying, monitoring, and responding to potential security threats and unauthorized activities.	[A]
C964.5	Analyze systems and networks using scanning techniques to effectively evaluate, assess, and identify potential vulnerabilities.	[A]
Course Contents:		
Module 1		15
Handling Evidence – Cryptographic Hashes – Incident Response – Need for Forensic Practitioners. Networking basics – Host side Artifacts – Services – Connections – Tools- netstat, nbstat – ifconfig – ntop – Task manage/Resource Monitor – ARP – Capture Packets - Packet Analysis with wireshark		
Module 2		15
Network Miner – Attack Types – SYN Floods – Malformed Packets – UDP floods – Amplification Attacks – Distributed Attacks – Backscatter – Vulnerability Exploits – Insider Threats - Evasion – Application Attacks – Time zones – Using Whois – Traceroute - Geo Location – Location based services – wifi Positioning – Preparing for Attacks – Netflow – Logging – Syslog – Window Event Logs		
Module 3		15
Firewall Logs – Router and Switch Logs – Log servers and Monitors – Antivirus – Incident Response Preparation – Security Information and Event Management – Detection Styles – Signature Based – Heuristic – Host based versus Network based – Packet Capature Times – Log Aggregation and Management – timelines – Network Scanning – Port Scanning – Vulnerability Scanning – Passive Data Gathering.

22CY965	ADVANCED CYBER FORENSICS	3/0/0/3
Nature of Course	D (Theory Application)	
Prerequisites	Computer System and Networks,	

Course Objectives:		
1	To learn cyber crime and forensics	
2	To become familiar with forensics tools	
3	To learn to analyze and validate forensics data	
4	To understand cyber laws and the admissibility of evidence with case studies	
5	To learn the vulnerabilities in network infrastructure with ethical hacking	
Course Outcomes		
Upon completion of the course, students shall have ability to		
C965.1	Understand the basics of cyber crime and computer forensics	[U]
C965.2	Apply a number of different computer forensic tools to a given scenario	[AP]
C965.3	Analyze and validate forensics data	[A]
C965.4	Understand Admissibility of evidence in India with Cyber laws and Case Studies	[U]
C965.5	Identify the vulnerabilities in a given network infrastructure	[A]
Course Contents:		
Module 1 Cybercrime and Digital Forensics		15
Introduction to Traditional Computer Crime, Traditional problems associated with Computer Crime. Role of ECD and ICT in Cybercrime - Classification of Cyber Crime. The Present and future of Cybercrime - Cyber Forensics -Steps in Forensic Investigation - Forensic Examination Process - Types of CF techniques - Forensic duplication and investigation - Forensics Technology and Systems - Understanding Computer Investigation – Data Acquisition		
Module 2 Advanced Digital Forensics and Cybercrime Investigation Techniques		15
Processing Crime and Incident Scenes – Digital Evidence - Sources of Evidence -Working with File Systems. - Registry - Artifacts - Current Computer Forensics Tools: Software/ Hardware Tools - Forensic Suite - Acquisition and Seizure of Evidence from Computers and Mobile Devices - Chain of Custody- Forensic Tools. Validating Forensics Data – Data Hiding Techniques – Performing Remote Acquisition – Network Forensics – Email Investigations – Cell Phone and Mobile Devices Forensics - Analysis of Digital Evidence - Admissibility of Evidence - Cyber Laws in India - Case Studies		
Module 3 Ethical Hacking and Network Security Techniques		15
Introduction to Ethical Hacking - Footprinting and Reconnaissance - Scanning Networks - Enumeration - System Hacking - Malware Threats – Sniffing – Email Tracking, Social Engineering - Denial of Service - Session Hijacking - Hacking Web servers - Hacking Web Applications – SQL Injection - Hacking Wireless Networks - Hacking Mobile Platform.

22CY966	VULNERABILITY ASSESSMENT AND PENETRATION TESTING		3/0/0/3
Nature of Course	D (Theory Application)		
Prerequisites	NIL		
Course Objectives:			
1	To comprehend the security framework related occurrences and knowledge on expected protections.		

	and countermeasures against normal vulnerabilities
2	To identify security weaknesses in a network, machine, and in software
3	To make students familiar with cyber kill-chains.
4	To develop the ability to perform thorough penetration tests on network infrastructures
5	To practice and apply acquired knowledge of penetration testing methodologies to assess vulnerabilities

Course Outcomes**Upon completion of the course, students shall have ability to**

C966.1	Associate flaws and vulnerabilities in applications, websites, networks, systems, protocols, and configurations using both manual techniques and assistive tools.	[U]
C966.2	Deploy and test exploits over targeting operating systems and services	[AP]
C966.3	Outline the knowledge on legal and ethical issues related to vulnerability and penetration testing.	[U]
C966.4	Apply pentest on target and generate a report based on the test and determines the security threats and vulnerabilities in computer networks.	[AP]
C966.5	Illustrate the acquired knowledge practice for testing the vulnerabilities and identifying threats in the system.	[A]

Course Contents:**Module 1****15**

Pentester – Types of Hackers – Pentest Methodology – Pentest Types – Vulnerability Scanning – Vulnerability Assessments – Pentest Target and Specializations - Asset Management: CIA Triad – Security Controls – Access Controls – Incident Responses – Malware – Advanced Persistent Threats – Cyber Kill Chain – Air-gapped Machines – Dark Web. Recon and Hijacking -Reconnaissance – External – Dumpster Diving – Social Media – Social Engineering - Internal – Sniffing and Scanning – De-Authentication of Attacks – Detection Mechanism - Session Hijacking: Blind and Non-Blind Spoofing - Detection and Prevention Mechanisms.

Module 2**15**

Network and Wireless Mayhem -WEP Theory – SSID - WPA – WPS -.MAC Filtering – Port Security – IPsec - War Diving: Basic Web Cracking – Detecting Wireless Attacks - Fake Authentication – Handshake Theory - Bypassing Firewalls – Evading Intruder Detection System - Securing Network from Attacks. Web Server Attacks - Understanding Web Languages - Web Architecture - Webpage Spoofing – Information Gathering from Target Websites – Finding Subdomains – Files Based Analysis - Cookies Handling - Web Page Attacks – Attack Detection – Protection Against Web Page Attacks – MITMF Code Injection.

Module 3**15**

Injection Vulnerability 4 hours Databases – Testing Database Vulnerability – Securing SQL Server – Detecting Database Attacks – Protection Against Database Attacks - File Upload Vulnerability – Inclusion Vulnerability - Code Execution – Local File – Remote File – Mitigation Strategies. Introduction to Gaining Access – Server Side – Client Side – Post – Exploitation Server Side Attacks – Metasploit and MSFS - Scripting Vulnerabilities - Automatic Vulnerability Compliances using OWASP ZAP. Trojan, Viruses and Backdoor Applications - Detection Mechanism - Unix Permission and Root Access – Buffer overflow – Memory Architecture – Examples – Escalation – Linux – Window – Preventing Mechanism – DDOS – Detection and Prevention – Tools.

22CY967	ARTIFICIAL INTELLIGENCE IN CYBER FORENSICS		3/0/0/3
Nature of Course	D (Theory Application)		
Prerequisites	ML concepts		
Course Objectives:			
1	To provide an understanding of the fundamental AI and ML techniques relevant to cybersecurity.		
2	To apply machine learning algorithms for solving cybersecurity problems in real-world scenarios.		
3	To understand and apply dimension reduction and clustering techniques to improve cybersecurity threat detection and analysis.		
4	To explore the critical role of data preprocessing, data engineering, and exploratory data analysis in machine learning for cybersecurity.		
5	To analyze the risks associated with AI applications in cybersecurity.		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C967.1	Describe AI techniques, including supervised and unsupervised learning, and their applications in cybersecurity.		[U]
C967.2	Apply machine learning algorithms to solve cybersecurity issues.		[AP]
C967.3	Apply dimension reduction and clustering techniques for cybersecurity scenarios		[AP]
C967.4	Apply data engineering and exploratory analysis on cybersecurity datasets		[AP]
C967.5	Analyze AI risk, misuses and managing of risks.		[A]
Course Contents:			
Module 1			15
Introduction to AI and Machine Learning, Supervised Learning for Cybersecurity-Decision Trees, Support Vector Machines (SVM), k-Nearest Neighbors (k-NN), and Neural Networks, Unsupervised Learning for Cybersecurity-Clustering techniques (K-Means, DBSCAN), anomaly detection (Isolation Forest, Autoencoders), Deep Learning and Reinforcement Learning in Cybersecurity-Introduction to deep learning (CNNs, RNNs) for advanced threat detection.Applications of reinforcement learning in adaptive cybersecurity			
Module 2			15
Introduction to Dimensionality Reduction Techniques, Clustering Techniques for Cybersecurity-K-Means, DBSCAN, and hierarchical clustering, Detecting DDoS attacks using clustering, Anomaly Detection using Unsupervised Learning-Advanced anomaly detection techniques: Isolation Forests, Autoencoders, Application of AI Techniques in Specific Cybersecurity Scenarios.			
Module 3			15
Data Engineering for Cybersecurity Datasets, Feature Engineering and Selection-Tools for feature selection: Chi-square tests, Recursive Feature Elimination (RFE),Exploratory Data Analysis (EDA) in Cybersecurity. AI Risks in Cybersecurity,Case Study: Feature engineering in DDoS attack detection.

22CY968	ADVANCED NETWORK FORENSICS AND TRAFFIC ANALYSIS	3/0/0/3

Nature of Course	D (Theory Application)	
Prerequisites	NIL	
Course Objectives:		
1	Understand key methodologies for identifying and analyzing network security incidents.	
2	Gain proficiency in using tools to detect network vulnerabilities and threats.	
3	Develop skills to investigate and resolve network security breaches through forensic techniques.	
4	Learn to assess and enhance overall network security posture.	
5	Apply real-world traffic analysis and forensics to mitigate potential cyber threats.	
Course Outcomes		
Upon completion of the course, students shall have ability to		
C958.1	Examine methodologies for network forensics identification.	[U]
C958.2	Apply tools and techniques for network vulnerabilities finding.	[AP]
C958.3	Investigate and resolve network security breaches using forensic techniques.	[A]
C958.4	Evaluate procedure for network forensics investigation.	[AP]
C958.5	Assess Network Security Posture	[A]
Course Contents:		
Module 1		15
Introduction to Digital forensics-Types of digital forensics, Introduction of Network forensics, Applications of network forensics. Basics of Network investigations-characteristics in the network world, identifying threats to the enterprise, Data breach surveys, differentiating between computer forensics and network forensics, strengthening our technical fundamentals, Understanding network security, Network security goals, Digital footprints.		
Module 2		15
Laying hands on the Evidence and Data Packet analyzing-Identifying sources of evidence, learning to handle the evidence, collecting network traffic using tcpdump, Collecting network traffic using Wireshark, Collecting network logs, Acquiring memory using FTK Imager, Tapping into network traffic:Packet sniffing and analysis using Wireshark, Packet sniffing and analysis using NetworkMiner. Wireless network forensics, Tracking Intruder and firewall, proxies-Laying the foundation – IEEE 802.11, Understanding wireless protection and security, discussing common attacks on Wi-Fi networks, Capturing and analyzing wireless traffic, Understanding Network Intrusion Detection Systems		
Module 3		15
Network forensics case investigation procedure- Knowing malware, Trends in malware evolution, Malware types and their impact, Understanding malware payload behavior, Malware attack architecture, Indicators of Compromise, Performing malware forensics, Revisiting the TAARA investigation methodology, Triggering the case, Acquiring the information and evidence, Analyzing the collected data – digging deep, Reporting the case, Action for the future, The future of network forensics.

22CY969	FORENSIC INVESTIGATION PROCEDURES AND PROTOCOLS	3/0/0/3
Nature of Course	C (Theory)	
Prerequisites	Nil	

Course Objectives:

1	To Understand the fundamentals of digital forensics and its role in cybersecurity
2	To Learn the procedures and protocols for collecting, preserving, and analysing digital evidence.
3	To Explore the legal and ethical considerations in conducting forensic investigations.
4	To Develop skills in using forensic tools to investigate cyber incidents.
5	To Understand the process of incident response and reporting.

Course Outcomes

Upon completion of the course, students shall have ability to

C959.1	Understand the Cybersecurity Forensic Principle, Legal & Ethical Frameworks.	[U]
C959.2	Utilise forensic analysis tools while managing and responding to incidents.	[AP]
C959.3	Analyse the Digital Evidence and Problem-Solving in Cyber Forensics.	[A]
C959.4	Apply the cyber forensics to malware forensic network security, cloud, and mobile applications.	[AP]
C959.5	Explore the techniques of Cyber Forensic Protocols to the Real-World Application.	[AP]

Course Contents:

MODULE I INTRODUCTION TO DIGITAL FORENSICS

15

Definition and scope of digital forensics, History and evolution of forensic science, Types of digital forensics (e.g., computer, network, mobile). Overview of the forensic investigation process. Legal and Ethical Considerations: Understanding legal frameworks (e.g., GDPR, HIPAA, CFAA), Chain of custody and evidence handling, Ethical dilemmas in forensic investigations, Privacy concerns and data protection.

MODULE II: INCIDENT RESPONSE AND FORENSIC READLINES

15

Incident response lifecycle, Establishing forensic readiness in organizations, Role of forensic investigations in incident response, Coordination with law enforcement agencies. Evidence Collection and Preservation: Procedures for identifying and collecting digital evidence, Preservation of evidence to maintain integrity, Forensic imaging and data acquisition techniques, Dealing with volatile data. Analyzing Digital Evidence: Introduction to forensic analysis tools (e.g., EnCase, FTK, Autopsy), Techniques for analyzing file systems, networks and applications, Malware analysis and reverse engineering, Data recovery and carving.

MODULE III: NETWORK FORENSICS

15

Capturing and analyzing network traffic, Intrusion detection and prevention systems (IDPS), Investigating network breaches and attacks. Mobile Device Forensics: Tools and techniques for mobile device investigations, Recovering data from smartphones and tablets, Challenges in mobile forensics (e.g., encryption, device diversity). Cloud Forensics: cloud computing impact on forensics, Challenges in cloud forensics (e.g., data location, multi-tenancy), Tools and techniques for investigating cloud environments, Legal and jurisdictional issues in cloud forensics. Malware Forensics: Identifying and classifying malware, Tools and techniques for malware analysis, Investigating malware-related incidents, Case studies of notable malware investigations.

22CY004	WEB SECURITY	3/0/0/3
Nature of Course	C (Theory Concept)	
Pre requisites	Nil	
Course Objectives:		

1.	To understand the fundamentals of web application security, including common vulnerabilities, secure coding practices, and session management techniques.
2.	To gain knowledge of network security fundamentals, including secure communication protocols, intrusion detection systems, and secure wireless network configuration.
3.	To develop proficiency in web security operations, such as creating and implementing web security policies, conducting web security audits, and managing web application vulnerabilities.

Course Outcomes**Upon completion of the course, students shall have ability to**

C004.1	Identify and mitigate common web application vulnerabilities using secure coding practices.	[U]
C004.2	Estimate secure configurations for network infrastructure to defend against threats.	[A]
C004.3	Observe web security monitoring, intrusion detection, and incident response tools for proactive threat detection and handling.	[U]
C004.4	Describe web security policies, incident response procedures, and compliance measures.	[U]
C004.5	Apply security measures, such as web application firewalls and secure authentication, to protect web applications and data.	[AP]

Course Contents:**MODULE 1****15**

Web Application Security: Introduction to Web Application Security - Web Application Architecture and Security Models - Common Web Application Vulnerabilities (e.g., SQL Injection, Cross-Site Scripting) - Secure Coding Practices for Web Applications - Input Validation and Output Encoding - Cross-Site Request Forgery (CSRF) Prevention - Session Management and Security - Authentication and Authorization Mechanisms - Web Application Firewalls (WAF) and Security - Web Services Security - Content Security Policy (CSP) Implementation and Management - Security Headers and Secure HTTP Headers - Server-Side Security and Secure Configuration - Client-Side Security and Browser-based Attacks – **Case Study:** Mitigating Cross-Site Scripting (XSS) Attacks.

MODULE 2**15**

Network and Infrastructure Security: Network Security Fundamentals - Secure Communication Protocols (e.g., SSL/TLS) - Web Server Security - Secure DNS Configuration and DNSSEC - Web Proxy Servers and Security - Intrusion Detection and Prevention Systems (IDS/IPS) - Network Access Control (NAC) - Denial-of-Service (DoS) and Distributed Denial-of-Service (DDoS) Mitigation - Secure Wireless Network Configuration - Virtual Private Networks (VPNs) and Web Security - Network Monitoring and Traffic Analysis - Security Considerations for Cloud-based Web Applications - Security Considerations for Internet of Things (IoT) in Web Environments – **Case Study:** Network Traffic Analysis for Threat Detection and Incident Response.

MODULE 3**15**

Web Security Operations and Incident Response: Web Security Policies and Procedures - Security Incident Response for Web Applications - Web Application Log Management and Analysis - Web Security Auditing and Compliance - Web Security Incident Handling and Forensics - Security Information and Event Management (SIEM) for Web Applications - Vulnerability Management for Web Environments - Web Security Monitoring and Intrusion Detection - Web Security Incident Reporting and Communication - Web Security Incident Recovery and Remediation – **Case Study:** Handling and Remediating Web Security Incidents.

22CY005		OPERATING SYSTEM SECURITY		3/0/0/3	
Nature of Course		C (Theory Concept)			
Pre requisites		Nil			
Course Objectives:					
1.	To understand the security goals and principles in operating systems, including confidentiality, integrity, and availability, and their importance in maintaining secure systems.				
2.	To analyze security configuration and management in protecting against vulnerabilities and attacks.				
3.	To learn operating system hardening techniques and secure system configuration practices to minimize vulnerabilities and protect against various threats.				
Course Outcomes					
Upon completion of the course, students shall have ability to					
C005.1	Apply operating system security measures to protect against unauthorized access and data compromise.			[AP]	
C005.2	Indicate comprehensive security configurations for operating systems to ensure system integrity and confidentiality.			[U]	
C005.3	Analyze and assess network security protocols, services, and technologies for secure network communications and protection against attacks.			[A]	
C005.4	Explain data protection mechanisms, including encryption and access controls, for secure storage of sensitive information.			[U]	
C005.5	Correlate and recommend security strategies for operating system components to enhance system resilience against threats.			[A]	
Course Contents:					
MODULE 115					
Operating System Security Fundamentals: Security Goals and Principles in Operating Systems - Access Control Models and Mechanisms - User Authentication and Authorization - Secure Boot Process and Trusted Computing - Operating System Hardening Techniques - Secure System Configuration and Baseline - Malware Detection and Prevention - Security Updates and Patch Management - Secure Logging and Auditing - Security Information and Event Management (SIEM) - Operating System Security Testing and Assessment - Secure Virtualization and Containerization - Secure Disposal and Decommissioning of Systems – Case Study: Secure Configuration Management in Operating Systems.					
MODULE 215					
Network and Communications Security: Secure Network Protocols and Services - Firewall Configuration and Management - Intrusion Detection and Prevention Systems (IDS/IPS) - Virtual Private Networks (VPNs) and Secure Communication - Secure Wireless - Securing Network Services (e.g., DNS, DHCP, FTP) - Network Access Control (NAC) in Operating Systems - Secure Web and Email Services Configuration - Network Monitoring and Traffic Analysis IPv6 Security in Operating Systems - Wireless Network Security in Operating Systems - Cloud Security Considerations for Operating Systems - Case Study: DNS Security Configuration and Management.					
MODULE 315					
System Integrity and Data Protection: Operating System Kernel Security - Memory Protection and Address Space Layout Randomization (ASLR) - Process Isolation and Sandboxing Techniques - File System Security and Permissions- Encryption and Data Protection Mechanisms - Secure Data Storage and Access Control - Backup and Recovery Strategies for Operating Systems - Secure Password Storage and Management - Secure Cryptographic Libraries and APIs - Securing User and System Data. Case Study: Data Protection and Access Control in Operating Systems.

22CY006		SECURITY GOVERNANCE, RISK AND COMPLIANCE		3/0/0/3	
Nature of Course		C (Theory)			
Pre requisites		Nil			
Course Objectives:					
1.		To understand the principles and importance of information security governance, risk management, and compliance in organizations.			
2.		To develop the skills to identify, assess, and mitigate risks by applying risk management principles and practices.			
3.		To learn how to align information security practices with relevant compliance regulations and standards, such as NIST SP 800-53, ISO 27001, PCI DSS, HIPAA, and SOX.			
Course Outcomes					
Upon completion of the course, students shall have ability to					
C006.1		Describe a comprehensive understanding of security governance, risk management, and compliance principles, frameworks, and requirements.			[U]
C006.2		Identify information security governance guidance and develop an effective information security program tailored to organizational needs.			[U]
C006.3		Analyze business challenges related to risk management, identify threats, vulnerabilities, and exploits, and assess their potential impact on the organization.			[A]
C006.4		Examine risk management plans, including risk assessment approaches, mitigation strategies, and the implementation of security controls.			[AP]
C006.5		Evaluate compliance with security controls frameworks, industry standards, and regulatory requirements, and develop strategies to ensure ongoing compliance and incident response readiness.			[A]
Course Contents:					
MODULE 115					
Security Governance					
Introduction - Information Security Governance Guidance - Information Security Programme Requirements - Roles and Responsibilities - Information Security Metrics and Monitoring - Establishing Information Security Governance - Strategy - Action Plan - Action Plan Intermediate Goals - Establishing Information Security Governance – Case Study: A Comprehensive Strategy for a Financial Institution on security governance.					
MODULE 215					
Risk Management Business Challenges					
Risk Management Fundamentals -Managing Risk: Threats, Vulnerabilities, and Exploits - Developing a Risk Management Plan Mitigating Risks: Defining Risk Assessment Approaches - Performing a Risk Assessment - Identifying Assets and Activities to Be Protected - Identifying and Analyzing Threats, Vulnerabilities, and Exploits - Identifying and Analyzing Risk Mitigation Security Controls - Turning Your Risk Assessment into a Risk Mitigation Plan Risk Mitigation Plans - Mitigating Risk with a Business Impact Analysis - Mitigating Risk with a Disaster Recovery Plan - Mitigating Risk with a Computer Incident Response Team Plan - Case Study: Enhancing Risk management in a Data center.					
MODULE 315					
Compliance					
Security Controls Frameworks (e.g., NIST SP 800-53, ISO 27001) - Security Policies and Standards Compliance - Security Awareness and Training Compliance - Incident Response and Breach Notification Compliance - Privacy and Data Protection Compliance - Payment Card Industry Data Security Standard (PCI DSS) - Healthcare Information Security and HIPAA Compliance - Financial Services and Sarbanes-Oxley (SOX) Compliance - Case Study: Securing Payment Card Data: A PCI DSS Compliance.

22CY010	LDAP DIRECTORY SERVICES		3/1/0/4
Nature of Course	F (Theory Programming)		
Pre requisites	Nil		
Course Objectives:			
1.	To gain knowledge of LDAP schema and structure		
2.	To develop skills in managing directory entries, including creating, modifying, and deleting entries.		
3.	To understand the process of integrating Oracle WebLogic Server with OUD as a data source.		
Course Outcomes			
C010.1	Explain the LDAP schema and structure and its role in organizing directory information.		[U]
C010.2	Apply the learned concepts and skills to a real-world case study, implementing LDAP Directory Services with OUD and OID.		[AP]
C010.3	Classify accurate searches for directory entries based on specific criteria.		[A]
C010.4	Utilize bulk tools to efficiently manage entries in OID.		[AP]
C010.5	Build applications with LDAP directory services, enabling seamless authentication, user management, and data retrieval.		[AP]
Course Contents:			
Module I – Basic LDAP Concepts		15	
Introduction to directory server, directory service and LDAP- LDAP schema and structure - Implementing LDAP - LDIF (LDAP data interchange format). Directory Services: Introduction to OUD and OID - Features and architecture of OUD - Basic administration tasks of OUD - Features and architecture of OID - Comparison of OUD and OID - Basic administration tasks of OID. Case study: Implementation of LDAP Directory Services with OUD and OID.			
Module II - Managing Directory Services		15	
Managing Directory Services: Command line tools - Searching directory entries - Managing directory entries (Creating, modifying, and deleting) - Managing entries in OID by using Bulk tools - Managing directory schema (Creating, modifying and deleting object classes and attributes) - Exporting and Importing directory data. Managing Directory Services: OUDSM - Connecting to OUD from OUDSM - Searching directory entries - Managing directory entries - Managing directory schema. Case study: Managing Directory Services with Command Line Tools and OUDSM.			
Module III - Managing Directory Services		15	
Managing Directory Services: ODSM - Connecting to OID from ODSM - Searching directory entries - Managing directory entries - Managing directory schema. Basic Logging - Introduction to logging - Viewing log files in OUD and OID - Configuring log files in OUD and OID - Integrating Applications with LDAP Directory Services - Exploring OUD and OUDSM with JXplorer - Integrating Oracle WebLogic Server with OUD data source. Case study: Managing Directory Services - Logging, and Integrating Applications with LDAP Directory Services.

22CY011	PROACTIVE SECURITY TOOLS AND TECHNIQUES		3/0/0/3
Nature of Course		C (Theory)	
Pre requisites		Nil	
Course Objectives:			
1.	To understand the Fundamentals of Proactive Security.		
2.	To develop Proficiency in Utilizing Proactive Security Tools and Techniques.		
3.	To equip students with the knowledge and awareness of emerging trends in proactive security.		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C011.1	Identify the key concepts and principles of proactive security.		[U]
C011.2	Apply vulnerability management and scanning techniques to identify and mitigate security vulnerabilities.		[A]
C011.3	Analyze security information and event management (SIEM) solutions to detect and respond to security incidents.		[A]
C011.4	Explain the applications of artificial intelligence and machine learning in enhancing security measures.		[AP]
C011.5	Analyze the security implications of blockchain technology and its potential use cases.		[A]
Course Contents:			
MODULE 1		15	Introduction to Proactive Security Tools and Techniques-Introduction to proactive security-Threat intelligence and analysis-Security risk assessment methodologies- Vulnerability management and scanning-Penetration testing and ethical hacking- Security monitoring and incident response-Security awareness and training- Security policy and governance-Secure coding practices- Network security tools and techniques-Application security tools and techniques- Endpoint security tools and techniques-Web security tools and techniques- Cloud security tools and techniques-Mobile security tools and techniques - Fortifying Digital Fortresses: A Case Study on Proactive Security Measures at any Bank.
MODULE 2		15	Intrusion detection and prevention systems-Security information and event management (SIEM)-Security orchestration, automation, and response (SOAR)-Deception technologies and honeypots-Threat hunting and analysis-Forensic analysis and incident response-Secure configuration management-Secure network architecture design-Data loss prevention (DLP), Identity and access management (IAM)-Security testing methodologies-Secure software development life cycle (SDLC), Security assessments and audits-Cryptography and encryption techniques-Security incident management and reporting Case Study: SecureCo - Strengthening Cyber Defense with Advanced Security Technologies
MODULE 3		15	Artificial intelligence and machine learning in security - Blockchain technology and security applications - Internet of Things (IoT) security - Industrial control system (ICS) security - Cloud-native security - DevSecOps and secure DevOps practices - Zero trust architecture - Container security - Serverless security - Big data security - Threat intelligence automation - Security analytics and behavioral analysis - Incident response automation - Secure remote access and remote work - Security challenges in emerging technologies - Case Study: TechSecure Inc. - Leveraging Emerging Technologies for Enhanced Security.

22CY012	JENKINS AND KUBERNETES	3/0/0/3

Nature of Course	C (Theory)

Pre requisites	Nil

Course Objectives:

1.	To configure and manage Jenkins and Kubernetes environments: Learn how to install and set up Jenkins and Kubernetes, configure Jenkins jobs, and create/manage Kubernetes resources.

2.	To enhance security and monitoring in Jenkins and Kubernetes.

3.	To Understand advanced features and future trends in Jenkins and Kubernetes.

Course Outcomes

Upon completion of the course, students shall have ability to

C012.1	Understand the architecture and components of Jenkins and Kubernetes, including the installation, configuration, and management of Jenkins and Kubernetes environments.	[U]

C012.2	Analyze and evaluate different deployment strategies, such as scaling, blue/green deployments, and canary deployments using Jenkins and Kubernetes.	[A]

C012.3	To appraise the security considerations in Jenkins and Kubernetes environments and implement security measures to protect deployments.	[A]

C012.4	To examine different deployment patterns and architectures for microservices using Jenkins and Kubernetes.	[AP]

C012.5	To analyze and implement advanced monitoring, observability, disaster recovery, high availability, performance optimization, and security features in Jenkins and Kubernetes.	[A]

Course Contents:

MODULE 1 Introduction to Jenkins and Kubernetes	15

Introduction to Jenkins & Kubernetes - CI/CD pipeline concepts - Installing and configuring Jenkins - Creating and managing Jenkins jobs - Jenkins plugins for Kubernetes integration - Kubernetes architecture and components - Deploying applications on Kubernetes clusters - Jenkins and Kubernetes integration overview - Setting up a Kubernetes cluster - Creating and managing Kubernetes resources - Jenkins and Kubernetes best practices

MODULE 2 Deployment and Security	15

Scaling Jenkins and Kubernetes deployments - Jenkins pipelines for Kubernetes deployments - Infrastructure as Code (IaC) with Jenkins and Kubernetes - Blue/Green deployments with Jenkins and Kubernetes - Canary deployments using Jenkins and Kubernetes - Configuring Jenkins agents on Kubernetes - Monitoring and

logging in Jenkins and Kubernetes - Autoscaling applications on Kubernetes with Jenkins - Security considerations in Jenkins and Kubernetes - Continuous Deployment (CD) strategies with Jenkins and Kubernetes - Jenkins and Kubernetes for multi-cloud deployments - Jenkins and Kubernetes for container orchestration

MODULE 3 Advanced Topics in Jenkins and Kubernetes

15

Jenkins and Kubernetes for microservices architecture - Continuous Delivery (CD) patterns with Jenkins and Kubernetes - Infrastructure provisioning with Jenkins and Kubernetes - Managing secrets and sensitive data in Jenkins and Kubernetes - Kubernetes Operators and custom resource definitions (CRDs) - Jenkins and Kubernetes for serverless applications - Advanced monitoring and observability in Jenkins and Kubernetes - Disaster recovery and high availability in Jenkins and Kubernetes - Jenkins and Kubernetes for hybrid cloud environments - Performance optimization in Jenkins and Kubernetes - Advanced security features in Jenkins and Kubernetes - Future trends and emerging technologies in Jenkins and Kubernetes

22CS005	NETWORKS AND SECURITY	2/0/2/3
Nature of Course		
Pre requisites	Nil	

Course Objectives:

1.	To describe the fundamentals of networking protocols such as TCP/IP, OSI model, and encapsulation.
2.	To explain the configuration and management of networking devices, including switches and routers.
3.	To familiarize VLAN configurations and IP addressing to create efficient network segmentation.
4.	To assess the role of SD-WAN in modern network architectures, focusing on scalability and flexibility.
5.	To implement network redundancy using Spanning Tree Protocol and VRRP for high availability.

Course Outcomes

Upon completion of the course, students shall have ability to

C005.1	Understand the differences between IPv4 and IPv6 protocols in various networking scenarios.	[U]
C005.2	Effectively apply VLAN configurations in optimizing network performance.	[AP]
C005.3	Construct secure WLANs using 802.1X authentication and AAA protocols to enhance network security.	[AP]
C005.4	Analyze the performance of various routing protocols like OSPF and static routing in different network setups.	[AN]
C005.5	Illustrate the benefits and limitations of different types of physical media in LAN and WAN environments.	[AN]

Course Contents:

FOUNDATIONS OF NETWORKING AND PROTOCOLS

15

Introduction to Networking- LAN, WAN and components- OSI model & encapsulation- Different types of physical media Compare unicast, multicast, and broadcast, TCP/IP stack, IPv4 & IPv6-Different types of networking devices. Switching Fundamentals Connecting and accessing switch - Initial switch setup-Configuring VLANs, tagging, and IP addressing- Usage of LLDP and ICMP for network discovery and diagnosis-Configure link aggregation. Basic IP Setup: Inter-VLAN routing IPv4 & IPv6- DHCP relay-Static IP routing and configuration, single area OSPF- Basics of VoIP and its Advantages-Types of VoIP.

NETWORK SWITCHING TECHNOLOGIES

15

Network Redundancy: Spanning Tree- VRRP and VSX - VSF configuration - Auto VSF - VSF MAD. Device Profiling: Use of device profiling - LLDP and MAC profiling - Establishing connections between APs and HPE- Setting up AP's. WLAN Fundamentals: Fundamentals of 802.11, RF frequencies and channels- RF Patterns and coverage including SNR - Roaming standards and QOS requirements - RF design - Configuring WLANs. SD-WAN Fundamentals of SD-WAN - Future of SD-WAN - SD-WAN edge devices - SD-WAN gateway controllers - Configuring SD-WANs - Benefits of SD-WAN - Understanding WLC.

IMPLEMENTING SECURE WLANS

15

AAA Security Frameworks - 802.1X authentication - Configuring secure WLANs - Roles and Access rules - Guest Access: setting up captive portal authentication- Configuration of guest WLANs- WLAN Security: WLAN security certificates- Cloud authentication.Network Security: Security devices (Firewalls, Routers and Wireless API's)-Principles of Network security-Types of Security-Pillars of Network security-Types of Network security Protections.

		Total Hours	45
Laboratory Component:			
S. No	List of Experiments		
1	Configuring and accessing a Switch in Packet Tracer		
2	Configure and analyze IPv4 and IPv6 addressing schemes and subnetting		
3	Design and simulate VLAN configuration with inter-VLAN routing and static IP routing		
4	Simulate DHCP relay and basic VoIP setup		
5	Configure STP (Spanning Tree Protocol) and analyze redundancy in network switches		
6	Setup and test VRRP (Virtual Router Redundancy Protocol)		
7	Implement secure WLAN setup using 802.1X authentication with RADIUS		
8	Create and analyze WLANs with guest access via captive portals		
9	Analyze OSPF routing protocol performance through simulation		
10	Emulate SD-WAN-like behavior using static routes and redundancy simulation		
		Total Hours	15

2CY702	PROJECT PHASE - I		0/0/6/3
Nature of Course	M (Practical Application)		
Pre-Requisites	Programming Languages		
Course Objectives:			
1	To identify a problem area and showcasing a strong understanding of the selected domain.		
2	To explore the latest advancements within their selected field of study.		

3	To understand and adhere to ethical standards and professional practices in software development.	
Course Outcomes:		
Upon completion of the course, students shall have ability to		
C703.1	Identify a problem and carry out a thorough study on the chosen problem	[AP]
C703.2	Analyze ongoing developments in the chosen domain and demonstrate technical knowledge pertaining to the same.	[A]
C703.3	Apply suitable tools, techniques, Algorithms, frameworks to solve the practical problems.	[AP]
C703.4	Develop a solution for the chosen problem and validate the results.	[C]
Course Guidelines:		
Introduction: Identify domain, Framing Problem Statement, Dataset Collection, Analyze the Techniques, Organize the work flow. Experiments: Develop software life cycle model, Implement, and provide solution for the chosen problem statement, Validate the result, and provide the documentation for findings.		
1. The entire semester shall be utilized by the students to do their Mini project work by receiving the directions from the project guide. 2. Every student shall have a project guide who is the member of the faculty of the institution for the in-house project or an industry mentor from the industry as project guide for an industry/internship project. 3. Identification of project guide has to be completed by the end of previous semester of the project work to be carried out. 4. The duration may be used for library reading, laboratory work, literature survey, computer analysis or field work as assigned by the guide and also to present periodical seminars about the progress made in the project. 5. Number of students in the project team should be maximum of 4. 6. Students can select project topics from the thrust areas. 7. Projects can be Research Based, Application Based, or Multidisciplinary. 8. Students can choose projects in line with the Departmental Mission, Vision and Program Outcomes. 9. Students can identify the project area / title, obtain the consent of faculty to guide them. 10. Students can make use of college subscribed E-resources like IEEE, ScienceDirect and Elsevier to choose base papers and thereby do literature surveys. 11. After project guide allocation, the student team must meet the respective project guide and update about the status of project periodically. 12. While working on the project, every student team must keep a project diary and record all relevant information. The diary must be verified and signed by the project guide which will be the periodic progress report and submitted during the project review to the project coordinator. 13. Students should not be involved in unethical behaviour, such as plagiarism, copyright violations, etc while working on projects and when submitting project reports. 14. The progress of the project will be evaluated on a continuous basis by conducting periodic internal reviews. The review committee may be constituted by the Head of the Department. 15. A final external project viva-voce examination will be conducted to evaluate the student project work based on oral presentation and the project report by an Internal and External Examiner. 16. Every student team will be required to prepare and submit two (2) copies plus (no. of students) copies of the Project report of typical length 30 – 60 pages (excluding Appendices). 17. The final report shall be in typewritten form as specified in the guidelines issued by the COE. 18. As outcome of the project, students are motivated to publish papers in Scopus Indexed Journals or present the project work in International Conferences.		

SEMESTER – VIII

2CY801	PROJECT PHASE II		0/0/24/12
Nature of Course	M (Practical Application)		
Pre-Requisites	Programming Languages		
Course Objectives:			
1	To demonstrate technical, interdisciplinary and interpersonal abilities.		
2	To enhance problem-solving and critical thinking abilities through the identification and resolution of technical challenges.		
Course Outcomes:			
Upon completion of the course, students shall have ability to			
C801.1	Identify the real-life problem from societal need point of view.	[AP]	
C801.2	Choose and compare alternative approaches to select most feasible one.	[C]	
C801.3	Analyze and synthesize the identified problem from technological	[A]	

	perspective.	
C801.4	Design the reliable and scalable solution to meet challenges.	[C]
C801.5	Examine and validate the solution based on the criteria specified.	[A]

Course Guidelines:

1. The entire semester shall be utilized by the students to do their project work by receiving the directions from the project guide.
2. Every student shall have a project guide who is the member of the faculty of the institution for the in-house project or an industry mentor from the industry as project guide for an industry/internship project.
3. Identification of project guide has to be completed by the end of previous semester of the project work to be carried out.
4. The duration may be used for library reading, laboratory work, literature survey, computer analysis or field work as assigned by the guide and also to present periodical seminars about the progress made in the project.
5. Number of students in the project team should be maximum of 4.
6. Students can select project topics from the thrust areas.
7. Projects can be Research Based, Application Based, or Multidisciplinary.
8. Students can choose projects in line with the Departmental Mission, Vision and Program Outcomes.
9. Students can identify the project area / title, obtain the consent of faculty to guide them.
10. Students can make use of college subscribed E-resources like IEEE, ScienceDirect and Elsevier to choose base papers and thereby do literature surveys.
11. After project guide allocation, the student team must meet the respective project guide and update about the status of project periodically.
12. While working on the project, every student team must keep a project diary and record all relevant information. The diary must be verified and signed by the project guide which will be the periodic progress report and submitted during the project review to the project coordinator.
13. Students should not be involved in unethical behaviour, such as plagiarism, copyright violations, etc while working on projects and when submitting project reports.
14. The progress of the project will be evaluated on a continuous basis by conducting periodic internal reviews. The review committee may be constituted by the Head of the Department.
15. A final external project viva-voce examination will be conducted to evaluate the student project work based on oral presentation and the project report by an Internal and External Examiner.
16. Every student team will be required to prepare and submit two (2) copies plus (no. of students) copies of the Project report of typical length 30 – 60 pages (excluding Appendices).
17. The final report shall be in typewritten form as specified in the guidelines issued by the COE.
18. As outcome of the project, students are motivated to publish papers in Scopus Indexed Journals or present the project work in International Conferences

PROFESSIONAL ELECTIVE

Vertical 1-

Cloud Computing & Data Storage Technologies

22CD901	DATA VIRTUALIZATION		3/0/0/3
Nature of Course:	G (Theory Analytical)		
Pre requisites:	-		
Course Objectives:			
1.	To learn about different Visualization Techniques		
2.	To study the Interaction techniques in information visualization fields		
3.	To understand various abstraction mechanisms		
4.	To create interactive visual interfaces		
Course Outcomes:			
Upon completion of the course, students shall have ability to			
C901.1	Describe about different Virtualization techniques		[U]
C901.2	Understand the Interaction techniques in information virtualization fields		[U]
C901.3	Understand Various abstraction mechanisms		[U]
C901.4	Understand security concerns specific to virtualized environments		[U]
C901.5	Compute interactive virtual interfaces		[AP]
Course Contents:			

MODULE I Data Virtualization Tools and Platforms**15 Hours**

Overview of Data Virtualization-Definition and Concepts-Comparison with ETL, Data Warehousing, and Data Lakes- Benefits and Challenges Data Virtualization Architecture Components of Data Virtualization-Logical vs. Physical Data Integration-Data Sources: Structured, Semi-Structured, and Unstructured Data- Overview of Leading Data-Virtualization Platforms-Denodo, IBM Cloud Pak, TIBCO, and others-Key Features and Capabilities.

MODULE II Designing and Implementing Data Virtualization Solutions**15 Hours**

Hands-on with Denodo Platform-Installation and Setup-Creating Data Views and Data Services-Connecting to Various Data Sources-Data Modeling in Virtualization-Logical Data Models-Data Views and Relationships-Best Practices for Data Modeling Query -- Optimization and Performance Tuning-Query Federation-Caching Strategies-Performance Monitoring and Optimization Techniques Security and Governance in Data Virtualization-Data Access Controls

MODULE III Abstraction in Time And Interactive Systems**15 Hours**

Data Masking and Encryption-Compliance and Regulatory Considerations Real-Time Data Virtualization-Streaming Data Integration-Use Cases: IoT, Financial Services, Healthcare-Integration with Big Data and Cloud Platforms-Integrating with Hadoop, Spark, and Cloud – Data-Warehouses-Hybrid and Multi-Cloud Data Virtualization- Machine Learning and AI with Data Virtualization-Enabling Data Science with Virtualized Data Case Studies: Predictive Analytics and Real-Time Insights.

Total Hours: 45**Text Books:**

1. Van der Lans, Rick F, "Data Virtualization for Business Intelligence Systems: Revolutionizing Data Integration for Data Warehouses", 1st Edition, 2012.
2. Davis, Judith R. & Eve, Robert, "Data Virtualization: Going Beyond Traditional Data Integration to Achieve Business Agility", 1st Edition, 2011.
3. John Wiley & Sons, "Data Virtualization for Dummies", 1st edition, 2015.

22IT901	CLOUD SERVICES AND INTEGRATION	3/0/0/3
Nature of Course	F (Theory Programming)	
Prerequisites:	Operating Systems	
Course Objectives:		
1	To understand the evolution of AWS from the existing technologies.	
2	To practice PuttyGen Environment Setup and Configuration.	
3	To team the necessary skills for design, develop and deploy services in core cloud services.	
4	To learn basic and advanced linux commands.	
5	To provide the perfect security for the entire infrastructure.	
Course Outcomes:		
Upon completion of the course, students shall have ability to:		

C901.1	Illustrate cloud benefits using Amazon Web Services.	[U]
C901.2	Deploy applications using PuttyGen Environment set up.	[AP]
C901.3	Identify an appropriate solution using AWS Cloud services for various use cases.	[AP]
C901.4	Explain the concept of Virtual Network Configuration, IAM, load balancing and scaling.	[AP]
C901.5	Practice basic and advanced Linux commands and Interpret the network security concepts in NAT, VPC and Routing policies.	[AP]

Course Contents:

Module I: Introduction to Cloud and Application deployment

15 Hours

Use case definition and application design-Introduction to cloud –Benefits of Cloud- Environmental Setup - Amazon Web services Overview – creating an AWS free account – AWS free tier features – AWS Management Console – Accessing AWS Management console -Regions and Availability Zones - AWS support-Application deployment-WinSCP – Putty-PuttyGen-ppk – pem -Application Environment Setup – nginx/httpd -web server configuration.

Module II: Core cloud service

15 Hours

Elastic Compute Cloud (EC2) Service - EC2 Instance life cycle hooks - Amazon Elastic Block Store (Amazon EBS) : Features - data services -optimized instances - Amazon Cloud Watch metrics for Amazon EBS - Event Bridge for Amazon EBS. Supply Chain Management (SCM) - Functions of Supply Chain Management - Elements - Model Types - Instance of SCM. Introduction to Simple Storage Service – Static web site hosting.

Module III: Linux basics and Network Security

15 Hours

Virtual Network Configuration/Setup - Identity and Access Management - load balancing - scaling - Linux basics and advanced commands -grep commands-NAT Instance – NAT Gateway- Virtual private Cloud (VPC) - VPC Peering and VPC End Points - VPC Flow Logs-Security Groups-Cloud Front-Registering a domain-Weighted Routing Policy-Latent Routing policy -Application integration and setup SSM parameter.

Total Hours:

45

22CY901		SECURITY AND PRIVACY IN CLOUD		3/0/0/3
Nature of Course		C (Theory Concept)		
Pre requisites		Nil		
Course Objectives:				
1.	To give an outline on the components of cloud			
2.	To understand the types of security in cloud			
3.	To understand the various privacy issues in cloud			
Course Outcomes				
Upon completion of the course, students shall have ability to				
C901.1	Understand the basic components of cloud & Security in the cloud .			[R]
C901.2	Illustrate the Infrastructure Security and Data Security in cloud			[R]
C901.3	Understand the concepts of Identity and Access Management			[U]
C901.4	Identify the storage and security management in the cloud.			[AN]
C901.5	Illustrate the privacy issues in could environment			[AP]

Course Contents:	
MODULE 1	15 Hours
Introduction to cloud and Infrastructure security : What Is Cloud Computing: Cloud Computing Defined, The SPI Framework for Cloud Computing, Relevant Technologies in Cloud Computing, The Traditional Software Model, The Cloud Services Delivery Model, Cloud Deployment Models, Key Drivers to Adopting the Cloud, The Impact of Cloud Computing on Users, Governance in the Cloud, Barriers to Cloud Computing Adoption in the Enterprise. Infrastructure Security: Infrastructure Security: The Network Level, Infrastructure Security: The Host Level, Infrastructure Security: The Application Level	
MODULE 2	15 Hours
Data Security and Access Management : Aspects of Data Security, Data Security Mitigation, Provider Data and Its Security Trust Boundaries and IAM, Why IAM?, IAM Challenges, IAM Definitions, IAM Architecture and Practice, Getting Ready for the Cloud, Relevant IAM Standards and Protocols for Cloud Services, IAM Practices in the Cloud, Cloud Authorization Management, Cloud Service Provider IAM Practice	
MODULE 3	15 Hours
Security Management and Privacy Issues in the Cloud Security Management Standards, Security Management in the Cloud Availability Management, SaaS Availability Management PaaS Availability Management, IaaS Availability Management, Access Control, Security Vulnerability, Patch, and Configuration Management. What Is Privacy, What Is the Data Life Cycle, What Are the Key Privacy Concerns in the Cloud, Who Is Responsible for Protecting Privacy, Changes to Privacy Risk Management and Compliance in Relation to Cloud Computing., Laws and Regulations	
Total Hours	
45

22AD902	STORAGE TECHNOLOGIES		3/0/0/3
Nature of Course		D (Theory Application)	
Prerequisites		Data base systems, Computer Architecture	
Course Objectives:			
1.	To discuss the basic principles of data storage and retrieval.		
2.	To analyze storage architecture; understand logical and physical components of storage Infrastructure.		
3.	To describe storage networking technologies such as FC-SAN, NAS, IP-SAN and data archival solution –CAS.		

4.	To understand and articulate business continuity solutions including, backup and recovery technologies.	
Course Outcomes:		
Upon completion of the course, students shall have ability to:		
C902.1	Illustrate Information Storage architecture and Information Management	U
C902.2	Understand the Components of an Intelligent Storage System and Third Platform Technologies.	U
C902.3	Analyze the architecture and working of Fibre Channel and compare Fibre Channel with other storage protocols	AN
C902.4	Implement NAS hardware for specific needs and demonstrate the file sharing protocols.	AP
C902.5	Implement and manage backup and recovery processes effectively.	AP
STORAGE SYSTEM		
		15 Hours
Introduction to Information Storage and Management: Information Storage - Evolution of Storage Technology and Architecture - Data Center Infrastructure - Key Challenges in Managing Information - Information Lifecycle. Storage System Environment: Components of a Storage System Environment - Disk Drive Components - Disk Drive Performance. RAID: Implementation of RAID - RAID Array Components - RAID Levels - RAID Comparison - RAID Impact on Disk Performance. Intelligent Storage System: Components of an Intelligent Storage System - Intelligent Storage Array. Third Platform Technologies: Cloud computing and its essential characteristics - Cloud services and cloud deployment models - Big data analytics, Social networking and mobile computing.		

STORAGE NETWORKING TECHNOLOGIES		15 Hours
Direct-Attached Storage and Introduction to SCSI: Types of DAS - DAS Benefits and Limitations - Disk Drive Interfaces - Introduction to Parallel SCSI - SCSI Command Model. Fibre Channel: Overview - The SAN and Its Evolution - FC Connectivity - Fibre Channel Ports - Fibre Channel Architecture - Zoning, Fibre Channel Login Types. Network-Attached Storage: General-Purpose Servers vs. NAS Devices - Benefits of NAS - NAS File I/O - Components of NAS - NAS Implementations - NAS File-Sharing Protocols - NAS I/O Operations. IP SAN: iSCSI - FCIP. Content-Addressed Storage: Fixed Content and Archives - Types of Archives - Features and Benefits of CAS - CAS Architecture - Object Storage and Retrieval in CAS.		
STORAGE VIRTUALIZATION		15 Hours
Storage Virtualization: Forms of Virtualization - SNIA Storage Virtualization Taxonomy - Storage Virtualization Configurations - Storage Virtualization Challenges - Types of Storage Virtualization. Introduction to Business Continuity: Information Availability - BC Terminology - BC Planning Lifecycle - Failure Analysis - Business Impact Analysis - BC Technology Solutions. Backup and Recovery: Backup Purpose - Backup Considerations - Backup Granularity - Recovery Considerations - Backup Methods - Backup Process - Backup and Restore Operations - Backup Topologies - Backup Technologies. Local Replication: Source and Target - Uses of Local Replicas - Data Consistency - Local Replication Technologies - Restore and Restart Considerations - Management Interface.		
Total Hours:		45
Text Books:

22CS901	SOFTWARE DEFINED NETWORKS	3/0/0/3
Nature of Course	D (Theory Application)	
Pre requisites	Computer Networks	
Course Objectives:		
1.	To outline the fundamentals of software defined networks.	
2.	To identify the separation of the data center and controller of SDN.	
3.	To examine the SDN Programming.	
4.	To demonstrate the various applications using SDN Framework.	
5.	To gain knowledge about the languages and tools used for SDN.	
Course Outcomes:		
Upon completion of the course, students shall have ability to:		
C901.1	Analyze the evolution of software defined networks.	[AP]
C901.2	Illustrate the various components of SDN data center networks.	[U]

C901.3	Design and develop various applications using SDN programming.	[AP]
C901.4	Construct the knowledge about various controllers of SDN.	[AP]
C901.5	Analyze real time networks using Virtual Programming Tools and SDN Frameworks.	[AN]

Course Contents:

MODULE I Introduction

15 Hours

History of Software Defined Networking (SDN) - Modern Data Center - Traditional Switch Architecture- Why SDN - Evolution of SDN - How SDN Works - Centralized and Distributed Control and Data Planes- Open Flow Specification - Drawbacks of Open SDN - SDN via APIs - SDN via Hypervisor-Based Overlays - SDN via Opening up the Device - SDN Controllers - General Concepts.

MODULE II Data Center and Programming

15 Hours

Multitenant and Virtualized Multitenant Data Center - SDN Solutions for the Data Center Network - VLANs - EVPN - VxLAN - NVGRE - **Programming SDNs:** Northbound Application Programming Interface - Current Languages and Tools - Composition of SDNs.

MODULE III Applications

15 Hours

Implementation and Applications-Juniper SDN Framework - IETF SDN Framework - Open Daylight Controller - Floodlight Controller - Bandwidth Calendaring - Data Center Orchestration. **Case Study:** Performance of an OpenFlow Controller using Mininet.

Total Hours: 45 Hours

22CB901	STREAM PROCESSING		3/0/0/3
Nature of Course		D (Theory Application)	
Pre requisites		NIL	
Course Objectives:			
1.	To introduce data processing terminology, definition & concepts		
2.	To define different types of Data Processing		
3.	To apply the concepts of Real-time Data processing		
4.	To select appropriate structures for designing and running real-time data services in a business environment		
5.	To illustrate the benefits and drive the adoption of real-time data services to solve real world problems		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C901.1	Introduce fundamental data processing terminology and concepts.		[U]
C901.2	Define and differentiate between types of data processing.		[U]
C901.3	Apply the principles and significance of real-time data processing.		[AP]
C901.4	Teach how to design and implement real-time data services in business.		[AP]
C901.5	Illustrate the benefits of real-time data services for solving business problems.		[A]
Module 1 (15 Hours)			
Introduction to Data Processing, Stages of Data processing, Data Analytics, Batch Processing, Stream processing, Data Migration, Transactional Data processing, Data Mining, Data Management Strategy, Storage, Processing, Integration, Analytics, Benefits of Data as a Service, Challenges. Introduction to Big data, Big data infrastructure, Real-time Analytics, Near real-time solution, Lambda architecture, Kappa Architecture, Stream Processing, Understanding Data Streams, Message Broker, Stream Processor, Batch & Real-time ETL tools, Streaming Data Storage.			
Module 2 (15 Hours)			
Relational Model, Document Model, Key-Value Pairs, NoSQL, Object-Relational Mismatch, Many to-One and Many-to-Many Relationships, Network data models, Schema Flexibility, Structured Query Language, Data Locality for Queries, Declarative Queries, Graph Data models, Cypher Query Language, Graph Queries in SQL, The Semantic Web, CODASYL, SPARQL. Apache Kafka, Kafka as Event Streaming platform, Events, Producers, Consumers, Topics, Partitions, Brokers, Kafka APIs, Admin API, Producer API, Consumer API, Kafka Streams API, Kafka Connect API.			
Module 3 (15 Hours)			
Structured Streaming, Basic Concepts, Handling Event-time and Late Data, Fault-tolerant Semantics, Exactly-once Semantics, Creating Streaming Datasets, Schema Inference, Partitioning of Streaming datasets, Operations on Streaming Data, Selection, Aggregation, Projection, Watermarking, Window operations, Types of Time windows, Join Operations, Deduplication			

Total Hours	45

Text Books:	
1.	Streaming Systems: The What, Where, When and How of Large-Scale Data Processing by Tyler Akidau, Slava Chemyak, Reuven Lax, O'Reilly publication
2.	Designing Data-Intensive Applications by Martin Kleppmann, O'Reilly Media
3.	Practical Real-time Data Processing and Analytics : Distributed Computing and Event Processing using Apache Spark, Flink, Storm and Kafka, Packt Publishing
Reference Books:

22CD903	MULTIMEDIA AND ANIMATION	3/0/0/3
Nature of Course:		D (Theory Application)

Prerequisites:		-
Course Objectives:		
1.	To grasp the fundamental knowledge of Multimedia elements and systems	
2.	To get familiar with Multimedia file formats and standards	
3.	To learn the process of Authoring multimedia presentations	
4.	To learn the techniques of animation in 2D and 3D	
5.	To explore different popular applications of multimedia	
Course Outcomes:		
Upon completion of the course, students shall have ability to:		
C903.1	Understand the context of Multimedia and its standards	[U]
C903.2	Examine the different types of media elements of different formats on content pages	[AP]
C903.3	Illustrate 2D and 3D creative and interactive presentations for different target multimedia applications.	[AP]
C903.4	Analyze the complexity of multimedia applications in the context of cloud, security and social networking	[AN]
C903.5	Apply different standard animation techniques for real time applications	[AP]
Course Contents:		
Module I MULTIMEDIA FILE FORMATS AND STANDARDS		15
Hours		
Definitions – Elements - Multimedia Hardware and Software - Distributed multimedia systems – Challenges - Multimedia metadata - Multimedia databases – Hypermedia - Multimedia Learning - File formats – Text and Image file formats - Graphic and animation file formats - Digital audio and Video file formats - Color in image and video - Color Models - Multimedia data and file formats for the web.		
Module II MULTIMEDIA AUTHORING AND APPLICATIONS		15
Hours		
Authoring metaphors - Card and Page Based Tools - Icon and Object Based Tools - Time Based Tools - Cross Platform Authoring Tools - 3D Modeling and Animation Tools – Image, Audio Editing, Movie Tools - Creating interactive presentations - Multimedia Big data computing, social networks, surveillance - Multimedia Cloud Computing - Multimedia ontology.		
Module III ANIMATION		15 Hours
Principles of animation - staging, squash and stretch - Timing, onion skinning, secondary action - 2D, 2 ½ D and 3D animation - Animation techniques: Keyframe, Morphing, Inverse Kinematics, Hand Drawn, Character rigging, Vector animation, Stop motion, Motion graphics - Fluid Simulation - Skeletal animation - Skinning Virtual Reality and Augmented Reality.		
		Total Hours: 45

Vertical 2- Applied Artificial Intelligence

22IT911	INTELLIGENT MULTIAGENT AND EXPERT SYSTEMS		3/0/0/3
Nature of Course		C (Theory Concept)	
Pre requisites		Nil	
Course Objectives:			
1.	To comprehend, the concept of agents, intelligent agent systems, design architectures, agent communication, interaction protocols, key types of possible multi-agent system interaction and agreement		
2.	To comprehend, the concept of expert system, expert system architecture, production rules and -implementation tools		
3.	To apply the principles and methods of intelligent multi-agents and expert systems		
4.	To synthesize multi-agent expert systems to solve small or large scale real life problems		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C911.1	Understand the nature of an agent, intelligent agent systems characteristics and the structure of agent, how agents are distinct from other software paradigms and typical applications of agent based technology		[R]
C911.2	Design intelligent agents that can effectively cooperate in order to solve problems		[AP]
C911.3	Apply the concepts of agent communication, interaction protocols, multi-agent interactions and agreements		[AP]
C911.4	Build agents capable of intelligent autonomous actions using appropriate methodologies		[AN]
C911.5	Understand the concept of expert system, models, production rules, implementation tools and existing system models for developing an expert system		[U]
Course Content			
Module I Introduction and Design of Intelligent Agent		15 Hours	
Agents and Environment; Performance measure; Nature of Environment; Abstract and Concrete Architecture for intelligent agents; Problem solving and planning: Result sharing, Task sharing and Distributed planning Deductive reasoning agents: AgentO, Practical Reasoning Agents: HOMER architecture; Reactive agents: Subsumption architecture; Hybrid agents: Touring Machines, InteRRaP.			
Module II Multi-Agent Communication, Interaction and Agreement Protocols		15 Hours	
Agent Communications: Knowledge Query and manipulation Language (KQML), Knowledge Interchange Format (KIF), Ontology, Coordination protocols, Cooperation Protocols, Contract Net, Blackboard Systems, Negotiation, Multi-agent Belief Maintenance, Market Mechanisms. Classifying multi-agent interactions: Multi-agent Encounters Equilibria - Competitive and zero-sum and other interactions; Cooperation: the Prisoner's dilemma and Axelrod's experiments; Reaching Agreements: Interactions between self-interested agents- auctions & voting systems negotiation - Argumentation; Interactions between benevolent agents: Cooperative Distributed Problem Solving (CDPS), partial			

global planning; coherence and coordination

Module III Multi Agent Methodologies and Expert System Models

15 Hours

Agent Methodologies- Mobile agents; Typical application areas of agent systems: Business Process Management, Distributed Sensing, Information Retrieval and Management, Electronic Commerce, Human-Computer Interfaces, Social Simulation etc. Expert Systems: Introduction, Architecture, Production rules and inference, Basic forms of inference: abduction; deduction; induction. Rule-based representations (with backward and forward reasoning); logic-based representations (with resolution refutation)

22AD901		Sri Krishna College of Engineering and Technology Batch: 2022-2026		APP DEVELOPMENT	0/0/6/3
Nature of Course		M (Practical Application)			
Pre-Requisite		Cloud Computing			
Course Objectives:					
1	To discuss the essence of front-end development skills.				
2	To impart the knowledge of React components used in Spring boot development platforms.				
3	Ability to understand and use Setup Cloud API.				
4	To deploy and test the React App used in Spring Boot.				
5	To learn the Spring Cloud concepts using Docker.				
Course Outcomes:					
Upon completion of the course, students shall have ability to:					
C901.1	Identify the basic concepts and design issues of React.				[R]
C901.2	Understand the principles of process and Spring boot.				[U]
C901.3	Illustrate the approaches in scheduling and Spring Cloud to apply in real world problems.				[AP]
C901.4	Apply concepts of Micro services Communication to the issues that occur in Real time applications.				[AP]
C901.5	Identify issues related to Docker, API Gateway.				[AP]
	Examine common React, Availability and Scalability.				[A]

Course Contents:

REACT INTRODUCTION - Components, Routes, State, Props, hooks, Higher Order Functions, Axios and Services, Ant Design. **Redux**: Core Concept, Data Flow, Store, Actions, Pure function, Reducers, Devtools, Middleware, Webpack, Redux Integration. **Spring boot: Annotations**, Beans, Configuration, HTTP Methods, Crud, Postman Overview. Spring Security: Authentication, Authorization, Security Implementation. Configure Security, Authentication Manager, HTTP Security, Circular Reference Error. JWT Implementation: JWT Overview, JWT Libraries, Helper Methods, Token Generation and Validation, Implementing JWT Authorization, Filter. **OAUTH Implementation**: Introduction, Sample flow, Authorization code grant type flow, Implicit grant flow, Password Grant Type flow, Client, Credential Grand type flow, Refresh token Grand type flow, Validating token, OAuth2 integration with Spring Security. **Building Micro services** : Monolith Architecture and Challenges of Monolith Architecture, What is Micro services & How It Solves the Challenges of Monolith Architecture, Micro services Architecture Benefits and Best Practices, Understanding Spring Cloud and It's Important Modules, Micro service Applications and It's Port Mapping

MICROSERVICES COMMUNICATION OVERVIEW - Micro services Communication using Rest Template, Micro services Communication using Web Client, Micro services Communication using Spring Cloud Open Feign - Understanding service Registry - Spring Cloud Netflix Eureka Server Implementation, Update on Using Spring Boot 3 Version, Register Micro service as Eureka Client, Update on using Spring Boot 3 Version, Register Micro service as Eureka Client, Running Multiple Instances of Micro service, Load Balancing with Eureka, Open Feign and Spring Cloud Load Balancer API gateway using Spring Cloud gateway: Understanding API Gateway - Create and Set up API Gateway Micro service, Update on Using Spring Boot 3 Version, Register API-Gateway as Eureka Client to Eureka Server, Configuring API Gateway Routes and Test using Postman Client, Using Spring Cloud Gateway to Automatically Create Rout.

CENTRALIZED CONFIGURATIONS USING SPRING CLOUD CONFIG SERVER - How to Use Spring Cloud Config Server, Create and Setup Spring Cloud Config Server Project in IntelliJ IDEA, Update on Using Spring Boot 3 Version, Register Config-Server as Eureka Client, Set up Git Location for Config Server, Refactor Department-Service to use Config Server, Refactor Employee-Service to use Config Server, Refresh Use case - No Restart Required After Config Changes, REACT Frontend Micro service: Create React App using Create React App Tool, Adding Bootstrap in React Using NPM, Write HTTP Client Code to Connect React App with API-Gateway (REST API Call), Create a React Component and Integrate with API Gateway Microservice, RabbitMQ Core Concepts: RabbitMQ Architecture, Install and Setup RabbitMQ using Docker, Explore RabbitMQ using RabbitMQ Management UI, Create and Setup Spring Boot 3 Project in IntelliJ, Connection Between Spring Boot and RabbitMQ, Configure RabbitMQ in Spring Boot Application, Create RabbitMQ Producer, Create REST API to Send Message, Create RabbitMQ Consumer, Configure RabbitMQ for JSON Message Communication, Create RabbitMQ Producer to Produce JSON Message, Create REST API to Send JSON Object, Create RabbitMQ Consumer to Consume JSON Message, Dockering Spring boot App : Install Docker Desktop, General Docker Workflow, Create Spring Boot Project and Build Simple REST API, Create Docker file to Build Docker Image, Build Docker Image from Dockerfile, Run Docker Image in a Docker Container, Push Docker Image to Docker Hub, Pull Docker Image from DockerHub

Course Guidelines:

19. Students choose a project topic from a list of approved options or propose their own idea from the area specified in the content and Faculty Coordinator/guide approval required for student-proposed projects
20. Number of students in the project team should be maximum of 4 and Every student shall have a project guide.
21. The entire semester shall be utilized by the students to do their project work by receiving the directions from the project guide.
22. Teams should submit a project proposal, including objectives, scope, timeline, and resources and Faculty Coordinator/guide reviews and approves the proposal.
23. Students should choose projects in line with the Departmental Mission, Vision, and Program Outcomes.
24. Teams should work on their projects, following the approved plan and Regular meetings with faculty advisors for progress updates and guidance.
25. Students should attend periodic reviews to present the progress of the project to faculty and peers' team and Evaluation is based on project outcomes, presentation quality, and teamwork.
26. Teams submit a final project report, including results, conclusions, and recommendations as specified in the guidelines issued by the COE.
27. Students should not be involved in unethical behavior, such as plagiarism, copyright violations, etc while working on projects and when submitting project reports.
28. Every student team will be required to prepare and submit two (2) copies plus (no. of students) copies of the Project report of typical length 30 – 60 pages (excluding Appendices).
11. A final external project viva-voce examination will be conducted to evaluate the student's Individual and team performance based on project outcomes, presentations, reports, and teamwork by an Internal and External Examiners.

Total Hours: 60

22CY911		ETL TOOLS		3/0/0/3	
Nature of Course		H (Theory)			
Prerequisites		Nil			
Course Objectives:					
1.	To Understand the Role of Data Integration in Modern Applications				
2.	To apply techniques for data cleansing, transformation, and loading into appropriate destinations like data lakes and data warehouses				
3.	To gain hands-on experience with both commercial and open-source ETL tools				
4.	To design, automate, and monitor ETL workflows				
5.	To understand the principles of data governance and best practices for ensuring data quality				
Course Outcomes					
Upon completion of the course, students shall have ability to					
C911.1	Understand the role of data integration in modern applications and explain key concepts such as data warehousing, big data, and the ETL process				[U]
C911.2	Demonstrate the ability to clean and transform data using techniques, and ensuring consistency in data extraction from various sources and mapping data to appropriate schemas.				[AP]
C911.3	Analyze different data destinations and analyze the effectiveness of incremental loads vs. full loads in various ETL scenarios				[A]
C911.4	Apply ETL tools such as Talend, Apache NiFi, and commercial platforms to implement efficient workflows				[AP]
C911.5	Apply data quality and governance practices to ensure data accuracy, consistency, and compliance with regulations, while implementing improvements in large-scale ETL pipelines				[AP]
Course Contents:					
Module 1: Foundations of Data Integration				15 Hours	
Importance of data integration in modern applications - Overview of Data Warehousing and Big Data - Introduction to ETL concepts (Extract, Transform, Load) - Data sources: Structured (SQL, Excel), Semi-structured (XML, JSON), Unstructured (logs, multimedia) - Techniques for data extraction from various sources (APIs, databases, flat files) - Connecting to databases and file systems					
Module 2: ETL Concepts and its techniques				15 Hours	
Data cleansing: Handling missing data, data inconsistencies, and formatting issues - Data transformation techniques: Aggregation, sorting, merging, and splitting - Introduction to data mapping and schema design - Types of data destinations: Data lakes, Data warehouses, and Databases - Techniques for loading data into storage solutions - Incremental loads vs full loads - Introduction to commercial tools (e.g., Informatica, Talend,					

Microsoft SSIS) - Introduction to open-source tools (e.g., Apache NiFi, Pentaho, Apache Airflow)	
Module 3: Advanced ETL Practices	15 Hours
Overview of ETL tool architecture - Using Talend for ETL: Basic components, data integration workflows - Apache NiFi: Flow-based programming for ETL pipelines - Ensuring data quality in ETL processes - Data governance principles and best practices - Handling large-scale datasets in ETL - Automating ETL workflows - Scheduling ETL jobs using ETL tools and cron jobs - Monitoring and error handling in ETL processes	
	Total Hours 45

22CS911	STATISTICAL PATTERN RECOGNITION		3/0/0/3
Nature of Course		H (Theory Technology)	
Prerequisites		-	
Course Objectives:			
1	Introduce the fundamental concepts and techniques of statistical pattern recognition.		
2	Learn and apply statistical decision theory for classification and clustering.		
3	Explore and implement feature extraction and dimensionality reduction techniques.		
4	Analyze and evaluate models for supervised and unsupervised learning.		
5	Design and apply statistical models to real-world problems in pattern recognition.		
Course Outcomes:			
Upon completion of the course, students shall have ability to:			
C911.1	Understand the foundational concepts of statistical pattern recognition.		[U]
C911.2	Apply statistical decision-making methods for classification.		[AP]
C911.3	Analyze clustering algorithms and feature extraction techniques		[AN]
C911.4	Evaluate performance measures of classification and clustering techniques.		[EV]
C911.5	Design and implement statistical models for real-world applications.		[AP]
Course Contents:			
MODULE I INTRODUCTION TO STATISTICAL PATTERN RECOGNITION			15 Hours
Introduction to pattern recognition and its applications - Statistical decision theory: Bayesian decision-making, risk minimization, and error rate - Parametric and non-parametric classification methods - Maximum likelihood estimation (MLE) - Maximum a posteriori estimation (MAP) - Discriminant functions, decision surfaces.			
MODULE II FEATURE EXTRACTION, DIMENSIONALITY REDUCTION, AND CLASSIFICATION			15 Hours
Feature extraction and selection techniques - Principal Component Analysis (PCA), Linear Discriminant Analysis (LDA) - Fisher's linear discriminant - Data preprocessing techniques - Support Vector Machines (SVM) and Kernel methods - Neural networks for classification.			
MODULE III CLUSTERING AND UNSUPERVISED LEARNING			15 Hours
Clustering techniques: K-means, hierarchical clustering, and density-based clustering - Expectation-Maximization (EM) algorithm, Gaussian Mixture Models (GMM) - Hidden Markov Models (HMM) for sequential data - Advanced models: deep learning and reinforcement learning for pattern recognition - Applications: image processing, speech recognition, bioinformatics.

22CD911	STOCHASTIC AND NETWORK CONTROL	3/0/0/3
Nature of Course:	G (Theory Analytical)	
Pre requisites:	-	

Course Objectives:		
1.	Understanding Stochastic Processes in Control System	
2.	Modeling and Analysis of Uncertainty.	
3.	Control of Large-Scale and Multi-Agent Systems.	
Course Outcomes:		
Upon completion of the course, students shall have ability to		
C911.1	Discuss of Networked Control Systems	[U]
C911.2	Formulate Analysis of Large-Scale Networks	[U]
C911.3	Apply of Control in Communication Networks	[AP]
C911.4	Show a Security and Control in Networked Systems	[AP]
C911.5	Schedule and Problem-Solving in Stochastic Control	[AN]
Course Contents:		
MODULE I Introduction to Stochastic Control		15
Hours		
Overview of Control Systems-Deterministic vs. Stochastic control systems. Applications of stochastic control in various domains (communications, robotics, finance)-Mathematical Preliminaries-Review of probability theory and random processes-Stochastic processes: Markov processes, Brownian motion, and Wiener processes-Principles of Optimal Control-Deterministic optimal control-Pontryagin's Maximum Principle-Hamilton-Jacobi-Bellman (HJB) equations		
MODULE II Stochastic Processes and Models		15 Hours
Introduction to Stochastic Models-Markov decision processes (MDP)-Poisson processes and applications-Discrete and continuous-time stochastic models-Martingales and Stochastic Calculus-Martingale property and its significance-Stochastic differential equations (SDEs)-Ito's Lemma and stochastic integration-Deterministic optimal control Pontryagin's Maximum Principle-Hamilton-Jacobi-Bellman (HJB) equations.		
MODULE III Control under Uncertainty and Communication Constraints		15 Hours
Control with Uncertain Dynamics-Adaptive control in stochastic environments-Robust control techniques for uncertain systems-Communication Constraints in Network Control-Quantization, delays, and packet drops-Event-triggered and time-triggered control-Control over wireless networks-Distributed optimization in networked systems-Algorithmic strategies for distributed control.		
Total Hours:		45

22AD911	BAYESIAN DATA ANALYSIS	3/0/0/3
Nature of Course	G (Theory Analytical)	

Pre-requisite	Nil	
Course Objectives:		
1	To learn basic concepts of Bayesian analysis.	
2	To introduce the Bayesian concepts and methods with emphasis on data analysis.	
3	To assess the outcome of prior distributions as well as posterior means.	
4	To identify the optimal model and to learn how to apply the same in suitable applications.	
Course Outcomes:		
Upon completion of the course, students shall have ability to:		
C911.1	Understand the basics of probability and relate it to the Bayesian inference.	[U]
C911.2	Apply the inference rules customized for single parameter models.	[AP]
C911.3	Examine the simulation environment for generation of inferences by utilizing various algorithms.	[A]
C911.4	Analyze the inference mechanism for multi-parameter and hierarchical models.	[A]
C911.5	Identify multiple modeling algorithms for predictive analysis and evaluate the outcome metrics	[AP]
C911.6	Apply the inference mechanism effectively in different nonlinear models.	[AP]
Course Contents:		
SINGLE PARAMETER MODELS:		15 Hours
Introduction to Probability, Priors and Posterior Analysis, Statistical Models, The Bayes inference. Bayes Rule, Normal model, Conjugate model, Binomial model, Posterior Distribution and Inferences. Markov Chain Monte Carlo simulation, RJags, The Metropolis-Hasting algorithm, Gibbs Sampler, Approximation based on posterior modes.		
MULTI-PARAMETER AND HIERARCHICAL MODELS:		15 Hours
Multi-parameter -Normal data with non-informative, conjugate, and semi-conjugate prior distributions, Multivariate normal model, Hierarchical - Exchangeability and setting up, Computation. Bayesian Data Analysis: Model checking, Evaluating, comparing, and expanding models, modeling accounting for data collection, Decision analysis.		
NON-LINEAR MODELS:		15 Hours
Mixture models- Setting up and interpreting mixture models, Gaussian process models Multivariate models- Non - normal models and multivariate regression surfaces. Comparison of Population: Inference for Proportions, Inference for Normal Populations, Rates and Sample Size Determination.		

Total Hours:		45
Text Books:

22AD917	VIRTUAL REALITY AND AUGMENTED REALITY	3/0/0/3
Nature of Course	C (Theory Concept)	
Prerequisites	Nil	

Course Objectives:		
1	To understand the basic concepts of Virtual Reality.	
2	To know input and output devices of virtual Reality.	
3	To understand the interaction techniques of VR.	
4	To outline the design and evaluation methods in VR.	
5	To discuss applications of VR in various industries.	
Course Outcomes:		
Upon completion of the course, students shall have ability to:		
C917.1	Understand the requirements of virtual and augmented reality.	[U]
C917.2	Know the usage of hardware and software in VR.	[R]
C917.3	Discover the various manipulation and interactive techniques.	[AP]
C917.4	Resize the working of augmented and virtual reality.	[AP]
C917.5	Implement Virtual/Augmented Reality Applications.	[A]
Course Contents: (Ref - Goldsmith University of London)		
MODULE I Introduction to Virtual Reality 15 Hours		
History of VR – Key Elements of VR - VR Paradigms - Input: User Monitoring – World Monitoring - Output devices: Visual Displays – Visual Representation in VR (Aural and Haptic) – Navigation. Case Study: Virtual Reality in Architecture and Design.		
MODULE II Visual Rendering, Perception and Interactive Technique 15 Hours		
Visual Rendering - Depth perception - Motion perception - Stroboscopic Apparent Motion - Color perception – 3D Manipulation task and technique - Interactive Techniques in Virtual Reality: Body Track - Hand Gesture - 3D Manus - Object Grasp - Features of augmented reality, Difference between AR and VR, Challenges with AR, AR systems and functionality, Augmented reality methods, Visualization techniques for augmented reality. Case study: Augmented Reality for Remote Collaboration in Manufacturing.		
MODULE III – Design and 3D interfaces 15 Hours		
Experience Designs – The Process for Designing User Experience for Virtual Reality - Three I's of VR -Immersion, Interaction, Imagination - Emotional Experience – Social Experience - Evaluation of VR – 3D Unity Architecture – Graphics – VR interfaces and AR Kit support – Application of AR and VR. Case study: Enhancing Museum Experiences through Augmented Reality and Virtual Reality.		
Total Hours:		45

Vertical 3- Information Security

292IT921	CYBER THREATS AND VULNERABILITIES		3/0/0/3
Nature of Course:		F (Theory Programming)	
Pre requisites:		Cryptography and Networks Security	
Course Objectives:			
1	To express the concepts of cyber security and the importance of cyber intelligence.		
2	To illustrate the common Cyber threats.		
3	To practice the concepts of applying various tools in cyber security		
4	To describe the process of the encryption and vulnerability tools		
5	To identify the network exploration and web vulnerabilities.		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C921.1	Explain the fundamentals of Cyber security and understand the importance of Cyber Intelligence.		[U]
C921.2	Identify the malware, ransomware attacks and the key elements of the cyber threats.		[U]
C921.3	Categorize the tools of cyber security.		[AN]
C921.4	Illustrate role of encryption tools and web vulnerability scanning tools.		[AP]
C921.5	Articulate the Concept of network exploration and web vulnerabilities.		[AP]
Course Contents:			
MODULE I Application of Cyber Security			15 Hours
Introduction to Cyber security: Overview of Cyber security principles and concepts – Threat landscape and current trends – Importance of cyber threat intelligence. Common Cyber Threats: Malware: types, characteristics and propagation techniques – Social Engineering: Phishing – spear phishing and social media attacks - Ransomware attacks - Man in the middle attacks-Denial of Service (DoS) and Distributed denial of service attacks (DDoS) - Password attacks-drive by download attacks – Keylogging - Packet Sniffing-Bug Bounties-Breaking Caesar Cipher-SQL Injection - Password Strength – Advanced Persistent Threats (APTs) and Targeted Attacks.			
MODULE II Applying Tools in Cyber Security			15 Hours
Tools and Techniques to perform Packet Sniffing, SQL Injection, Password Strength Analysis, Discovery and risk detection in remote hosts by listening open ports – Network Security Vulnerabilities: Network Protocols and vulnerabilities – Wireless Network Vulnerabilities and attacks – Network Scanning and reconnaissance techniques - Network security monitoring tools - Encryption tools - Web			

vulnerability scanning tools.

MODULE III Network Exploration and Web Vulnerabilities

15 Hours

HTTP methods enumeration, HTTP proxy check, Discovering directories in web servers, User account enumeration, Detecting XST vulnerabilities and Detecting XSS vulnerabilities-Brute forcing DNS records – **Web Application Security:** Common vulnerabilities in web applications - Session hijacking and Cross-Site Request Forgery (CSRF) attacks - Security best practices for web development - Web application firewalls and security testing tools – **Case Study:** SQL injection, Cross-Site Scripting in real time applications.

Total Hours: 45

22IT923	CYBER PHYSICAL SYSTEMS		3/0/0/3
Nature of Course		C (Theory Concept)	
Pre requisites		Nil	
Course Objectives:			
1.	Outline the basic concepts, requirements, principles, and techniques in emerging cyber physical systems		
2.	Make awareness about the components that define the physical and cyber aspects of real-world technologies		
3.	To describe the processing units applicable for cyber physical system		
4.	To give insights about implementation of a cyber-physical system from a computational perspective		
5.	To provide knowledge on Security and Privacy in Cyber Physical System		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C923.1	Summarize the basic concepts and purpose of the different components of Cyber Physical Systems		[U]
C923.2	Interpret the new system and ability to interact with Cyber Physical System		[U]
C923.3	Illustrate the abstraction of various system architectures and understand the semantics of a CPS model		[U]
C923.4	Choose the appropriate cyber-physical systems protocols for Internet of Things		[AP]
C923.5	Apply the common methods used to secure cyber-physical systems		[AP]
Course Contents:			
Module I Framework for Cyber-Physical Systems (CPS) : 15 Hours Introduction to CPS- IoT Vs CPS- Concept map- CPS analysis by example- Application Domains- Significance of CPS- Hybrid System Vs. CPS- Multi dynamical system- Component of CPS- Physical- Cyber and Computational Components - Introduction to sensors and actuators – Deployment- assignment and coordination			
Module II Physical, Cyber and Computational Components: 15 Hours Network criteria designs- Importance of sensors- causality-sensor reliability-memory requirement-computational complexity redundant sensors-Operational criteria- Test bed-Networking technologies for CPS- sensing networks and data connectivity- M2M communication- characteristics of IP and Non-IP			

solutions, 6LoWPAN, RPL- CoAP and HTTP- CoAP- Mobile cloud computing- Definition and types

Module III Secure Deployment and Applications of CPS :

15 Hours

Embedded system design flow for CPS- processing units- Overview-ASIC-Processor-DSP, Multimedia processor- VIEW-microcontroller and MPSoC- Reconfigurable logics. Secure Task mapping and Partitioning - State estimation for attack detection - Automotive Vehicle ABS hacking - Power Distribution Case study: Attacks on Smart Grids – Virtual Instrumentation; Applications of CPS.

22IT924	ETHICAL HACKING AND AUDITING FRAMEWORKS		3/0/0/3
Nature of Course		F (Theory Programming)	
Prerequisites		Nil	
Course Objectives:			
1	To understand the basics of Network in security.		
2	To understand Sniffing and Spoofing tools.		
3	To develop the fundamental understanding of OS environment setup.		
4	To apply the concepts of Auditing frameworks.		
5	To learn different techniques of penetration testing.		
Course Outcomes: Upon completion of the course, students shall have ability to:			
C924.1	Understanding the basics of networking with the introduction on the system attacks		[U]
C924.2	Explain the foundations of attacks in terms of industry, society and information systems		[U]
C924.3	Apply appropriate methods, securities and vulnerabilities.		[AP]
C924.4	Explore the methods of services of a remote host.		[A]
C924.5	Design and implement innovative features in NSE scripts.		[AP]
C924.6	Design and implement an insecure login mechanisms system.		[AP]
Module I: Introduction to Network presence15 Hours			
Network in security - Sniffing and spoofing - sniffing tools - spoofing crypto and Wi-Fi - Case study on tcp dump - Wire shark - Burp Site.			
Module II: Introduction to Auditing Frameworks15 Hours			
Introduction to Nmap - Nmap Environment setup in linux / windows - scanning remote host and listing open ports - Identifying services of a remote host - Identifying live hosts in local networks - scanning using specific port ranges - NSE scripts.			
Module III: Penetration testing15 Hours			
Introduction to OWASP top vulnerabilities - Identifying insecure login mechanisms - Insecure credential storage - insecure logging.			
Total Hours:			45

22CY921	DATA PRIVACY AND SECURITY	3/0/0/3
Nature of Course:	(Theory, Analytical)	
Prerequisites:	Data Structures and Algorithms	
Course Objectives:		
1.	Acquisition of new knowledge and skills from research literature	
2.	Quantitative and qualitative analysis of problems	
3.	Evaluate proposed technical mechanisms for privacy protection	
4.	Identify privacy related aspects of data uses	
5.	Apply differentially private mechanisms when the sensitivity to requested information to changes in data is readily available	
Course Outcomes:		
Upon completion of the course, students shall have ability to:		
C921.1	Describe the concept of privacy including personally private information.	[U]
C921.2	Describe how an attacker can infer a secret by interacting with a database	[A]
C921.3	Explain how to set a data backup policy or password refresh policy.	[A]
C921.4	Discuss how to set a breach disclosure policy	[A]
C921.5	Identify the risks of relying on outsourced manufacturing	[AP]
Course Contents:		
Module I15 Hours		
Fundamentals of Data Privacy & Security- Databases and Exploratory Data Analysis, Data Representation and Storage, Authentication and Authorization, Database Security Anonymization-Linkage and re-identification attacks, k-anonymity, l-diversity, t-closeness, Implementing anonymization, Anonymizing complex data		
Module II15 Hours		
Differential Privacy (DP) Privacy and anonymity in mobile environments, Formalism and interpretation of DP, Fundamental DP mechanisms and properties, Interactive and non-interactive DP, DP for complex data, Local Differential Privacy (LDP)		
Module III15 Hours		
Security and Privacy in AI and Machine Learning (AI/ML) : Machine Learning (ML) background, Adversary modeling in AI/ML, Poisoning, evasion, and backdoor attacks, Test-time attacks: Model inversion, model stealing, membership inference, adversarial examples, Architectures and algorithms for privacy-preserving machine learning		
Total Hours (Theory):		45

22CY944		CYBER CRIME AND FORENSICS		3/0/0/3
Nature of Course:		E (Theory Technology)		
Pre requisites:		Nil		
Course Objectives:				
1.	To understand the nature and scope of cybercrime and its impact on individuals, organizations, and society			
2.	To develop the skills and knowledge necessary for the investigation and analysis of digital evidence.			
3.	To explore advanced techniques and tools related to cybercrime investigations and digital forensics			
Course Outcomes:				
Upon completion of the course, students shall have ability to:				
C944.1	Summarize the concept of cybercrime and the attacks			[U]
C944.2	Understand the legal, regulatory frameworks and jurisdictional challenges			[U]
C944.3	Apply digital forensics principles, tools and techniques			[AP]
C944.4	Apply forensic analysis methodologies to reconstruct cybercrime incidents			[AP]
C944.5	Analyze and respond to malware, network-based attacks and emerging trends			[A]
Course Contents:				
Module I INTRODUCTION TO CYBER CRIME 15 Hours				
Overview of cybercrime- classification- Cybercriminal motivations and attack vectors- Impact of cybercrime on individuals, organizations, and society- Cybercrime laws and regulations in India- Privacy and data protection laws				
Module II DIGITAL EVIDENCE AND ANALYSIS 15 Hours				
Digital Evidence - Identification, collection, and handling of digital evidence- Chain of custody and evidence- documentation- Legal considerations for evidence admissibility- Digital Forensics Tools Forensic acquisition and imaging-File system analysis and recovery- Network traffic analysis and log examination-Mobile device and cloud forensics- Investigation Process- Incident response and evidence triage- Forensic analysis methodologies- Reconstruction and analysis of digital evidence- Reporting and presenting findings				
Module III CYBER FORENSIC ANALYSIS TECHNIQUES 15 Hours				
Forensic analysis techniques- Intrusion detection and prevention systems- Network traffic capture and analysis- Introduction to malware analysis- Static and dynamic malware analysis techniques- Reverse engineering of malicious software-Analysis of real-world cybercrime cases- Investigation challenges in advanced persistent threats- Emerging trends- case studies in cybercrime and digital forensics				
Total Hours				45

22CY922		DIGITAL AND MOBILE FORENSICS		3/0/0/3
Nature of Course:		E (Theory Technology)		
Pre requisites:		Cyber Security Essentials		
Course Objectives:				
1.	To understand the basics of mobile device forensics, mobile operating systems and architectures			
2.	To acquire skills in the acquisition, preservation, and analysis of mobile device data.			
3.	To analyze and interpret mobile device for forensic investigations.			
Course Outcomes:				
Upon completion of the course, students shall have ability to:				
C922.1	Summarize the fundamental concepts and principles of mobile device forensics			[U]
C922.2	Demonstrate knowledge of mobile device file systems, data structures, and artifacts			[U]
C922.3	Apply forensic methodologies to extract types of data from mobile devices			[AP]
C922.4	Apply mobile device data acquisition, preservation, and analysis using industry-standard forensic tools and techniques			[AP]
C922.5	Analyze the legal and ethical considerations in mobile device forensics			[A]
Course Contents:				
Module I				15
Hours				
MOBILE DEVICE DATA ACQUISITION				
Overview of mobile device forensics- Mobile operating systems and architectures- Device types and their implications in forensic analysis- Mobile Device Acquisition and Preservation- Physical and logical acquisition methods for mobile devices- Data extraction tools and techniques- Preservation and documentation of mobile device evidence- case study on android and iOS mobile devices				
Module II				15
Hours				
MOBILE APPLICATION AND MOBILE NETWORK ANALYSIS				
Overview of file systems used in mobile devices- file system artifacts, metadata, and timestamps- storage locations and encryption mechanisms- Mobile Device Application Analysis and Network Analysis- Examination of application data- app artifacts, databases, and user-generated content- Mobile device communication protocols- network traffic analysis- mobile device connections- mobile browsing data- Wi-Fi data, and Bluetooth interactions- case study on mobile device applications				
Module III				15
Hours				
MOBILE DEVICE FORENSIC TECHNIQUES AND PRIVACY				
Challenges in Mobile Device Forensics- Analysis of locked and damaged devices- findings and forensic				

reports- evidence in legal proceedings- Legal framework and regulations- Privacy and data protection laws- Ethical considerations- professional responsibilities- case study on mobile data privacy

Vertical 4- Data Analytics

22IT931	NLP IN ANALYTICS		3/0/0/3
Nature of Course		C (Theory Concept)	
Pre requisites		Nil	
Course Objectives:			
1.	To recognize and define core computer vision problems.		
2.	To understand the principles behind the creation of the convolution neural network.		
3.	To familiarize formal models to express natural language phenomenon		
4.	To implement and debug large NLP systems in a clean and structured manner		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C931.1	Infer the different architectures of AI Computer Vision.		[U]
C931.2	Examine different methodologies to create application using LeNet-5, AlexNet, VGG, ResNet.		[A]
C931.3	Interpret state-of-the-art works of literature on Object detection and localization algorithms.		[U]
C931.4	Identify the appropriate deep learning models for analyzing the data for a variety of real world problems.		[AP]
C931.5	Develop computer vision applications.		[AP]
C931.6	Inspect the Transformer idea related to language modeling, sequence-to-sequence modeling, and googles’s BERT model.		[A]
Natural Language Processing (NLP) 15 Hours NLP overview - NLP - RNN - NLP - LSTM - GRU - NLP Attention based models: Encoder - Decoder - attention mechanism - NLP Transfer learning: GPT and BERT.			
Architectures of Computer Vision: 15 Hours Background - Requirements of Computer vision- Architectures: LeNet-5 and implementation-AlexNet and implementation-VGG and implementation-Inception and practical-ResNet and implementation.			
Advance Computer Vision: 15 Hours Data Augmentation and its benefits - object detections: bounding boxes - bounding box regression - IoU - Precision and recall - Transfer Learning - Average precision - CNN: Architecture - implementations - Cons - FAST RCNN - FAST RCNN Architecture - FASTER RCNN - and its architecture - YOLO: Architecture and implementation Detectron and its implementation.			
Total Hours			45

22IT903	DEEP LEARNING TECHNIQUES		3/0/0/3
Nature of Course		C (Theory Concept)	
Pre requisites		Artificial Intelligence and Machine Learning	
Course Objectives:			
1.	To understand the fundamentals of neural networks and deep networks.		
2.	To learn the different architectures of deep networks.		
3.	To examine the core concepts in deep learning.		
4.	To learn the applications of deep learning.		
5.	To understand the underlying implementations of deep learning models, and techniques for optimization		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C903.1	Define the basics of Neural and Deep Networks.		[R]
C903.2	Summarize the CNN and RNN architectures that helps resolve complex problems.		[U]
C903.3	Experiment with the performance of a Deep Learning Network.		[AP]
C903.4	Apply Deep Learning for solving Real world problems.		[AP]
C903.5	Analyze appropriate neural network architectures and techniques for specific applications		[A]
Course Contents:			
Foundations of Neural Networks		15 Hours	
Neural Networks – Training Neural Networks – Activation Functions – Loss Functions – Hyper parameters. Fundamentals of Deep Networks-Introduction to Deep Learning-Generative Adversarial Networks- Image Segmentation –Reinforcement Learning and Deep Q-Networks (DQN)-Attention Mechanisms and Transformer Networks-Transfer Learning-Synthetic Data Creation.			
CNN and RNN		15 Hours	
CNN: Introduction-Convolution and Pooling Layers-CNN Architectures (LeNet, AlexNet, VGG, ResNet)- Object Detection and Localization with CNNs-Image Classification and Transfer Learning- Case Studies: Image Recognition and Analysis. RNN: Introduction- Vanishing and Exploding Gradients - LSTM (Long Short-Term Memory) NetworksGRU (Gated Recurrent Unit) Networks- Applications of RNNs: Sequence Prediction, Language Modeling-Time Series Analysis and Forecasting.			
Applications		15 Hours	
Autoencoders and Dimensionality Reduction-Implementing Neural Networks and Deep Learning Models using Frameworks like TensorFlow / PyTorch, Case Studies: Large-Scale deep learning- Computer Vision- Text Classification - Named Entity Recognition (using NLTK Library).			
Total Hours			45

22IT932	COGNITIVE SYSTEMS AND ANALYTICS		3/0/0/3
Nature of Course		H (Theory Technology)	
Pre requisites		Nil	
Course Objectives:			
1.	To learn the history and fundamentals of cognitive science.		
2.	To demonstrate learning, reasoning and design principles in cognitive systems.		
3.	To illustrate the various analytics techniques in cognitive computing.		
4.	To develop skills in analyzing, interpreting and assessing the empirical data and research techniques that contributes to cognitive science.		
Course Outcomes:			
Upon completion of the course, students shall have ability to			
C932.1	Recall the basic concepts of cognitive science and its algorithms		[R]
C932.2	Understand the complexities of cognition using neural, social and technological approaches		[U]
C932.3	Practice the Learning, reasoning and designing methodologies in cognitive systems		[AP]
C932.4	Use various Analytics techniques in cognitive systems		[AP]
C932.5	Apply cognitive science theories, concepts to individual, social and cultural issues		[AP]
C932.6	Examine various cognitive applications for social issues		[A]
Course Contents:			
Introduction to Cognitive Science		15 Hours	
Introduction: Foundation of Cognitive Science and design principles - Natural language processing in support of a cognitive system - Role of cloud and distributed computing in cognitive computing - Relationship between big data and Cognitive computing - The Business Implications of Cognitive Computing – Case based Reasoning.			
Cognitive Systems and Learning		15 Hours	
Concept Learning-Classification Logic-Planning-Understanding Common Sense Reasoning-Scripts. Cognitive Systems and Reasoning- Explanation Based Learning -Analogical Reasoning-Version Spaces-Constraint Propagation Diagnosis-Meta Reasoning			
Cognitive System Design Principles & Applications		15 Hours	
Machine Learning Hypothesis -Generation and Scoring-Representing Knowledge taxonomies and Ontologies -Advanced Analytics- Predictive Analytics-Text Analytics - Image Analytics-Speech Analytics Case study- Sensitivity Analysis using AWS services. Applications of cognitive computing - Building a Cognitive Healthcare Application, Smarter cities in Government & Emerging cognitive computing areas.

22CS931		BIG DATA ANALYTICS		3/0/0/3	
Nature of Course		H (Theory Technology)			
Prerequisites		-			
Course Objectives:					
1		Introduce the fundamental concepts of Big Data and its importance in modern data-driven decision making.			
2		Familiarize students with Big Data frameworks and tools such as Hadoop, Spark, and NoSQL databases.			
3		Impart knowledge on data preprocessing techniques and distributed computing.			
4		Enable students to apply machine learning and data mining techniques to large datasets.			
5		Teach the evaluation and implementation of big data analytics solutions for real-world problems.			
Course Outcomes:					
Upon completion of the course, students shall have ability to:					
C931.1		Explain the concepts, characteristics, and significance of Big Data and its role in solving contemporary data challenges.			[U]
C931.2		Utilize and assess data using Association Rule Mining, Classification, and Clustering algorithms to support data-driven decision-making			[AP]
C931.3		Implement data preprocessing techniques such as cleaning, transformation, and integration to prepare datasets for comprehensive analysis.			[AN]
C931.4		Demonstrate the principles of NoSQL databases, their types, and their relevance in managing Big Data effectively			[AN]
C931.5		Explore and apply visualization tools such as Tableau and Power BI to represent and communicate insights derived from Big Data.			[AP]
MODULE I INTRODUCTION TO BIG DATA					15 Hours
Introduction to Big Data: Definition, Characteristics of Big Data (Volume, Variety, Velocity, Veracity, Value), Big Data vs Traditional Data, Importance of Big Data. -Big Data Challenges: Data storage, processing, and management - Hadoop Ecosystem: Hadoop Architecture, HDFS, MapReduce, YARN, and Hadoop components like Hive, Pig, and HBase.					
Module II: DATA ANALYTICS ALGORITHMS					15 Hours
Association Rules: Introduction and Overview. Apriori Algorithm: Concepts, Process, and Applications. Frequent Pattern Tree: Construction, Advantages, and Use Cases. Classification Algorithms: 1R Algorithm: Rule-based Classification, Working Principle, and Example. Decision Trees: Structure, Construction, and Applications. Naïve Bayes Classification. Clustering Algorithms: K-Means Clustering: Algorithm, Steps, and Optimization Techniques. Hierarchical Clustering.					

MODULE III BIG DATA AND VISUALIZATION**15 Hours**

Introduction to NoSQL, Types of NoSQL Databases (Document, Column, Graph, Key-Value), and popular NoSQL databases. Analyzing big data with twitter — Big data for E-Commerce Big data for blogs — Data Preprocessing: Data cleaning, transformation, and integration techniques in Big Data. Spark Framework: Introduction to Apache Spark. Understanding Data Visualization. Importance of Data Visualization in Big Data Analytics. Common types of visualizations: Bar charts, line graphs, pie charts, heatmaps, scatter plots. Tools for Visualization: Tableau and Power BI.

Total Hours: 45**Text Books:**

22CD931	SOCIAL NETWORK ANALYSIS		3/0/0/3
Nature of Course:		C (Theory Concept)	
Pre requisites:		-	
Course Objectives:			
1.	To explore the concept of semantic web technologies.		
2.	To illustrate the knowledge representation using ontology.		
3.	To examine human behaviour in social web and related communities.		
4.	To discuss visualization of social networks.		
Course Outcomes:			
Upon completion of the course, students shall have ability to			
C931.1	Describe the concepts in semantic web and social network.		[U]
C931.2	Understand semantic web related applications.		[U]
C931.3	Discuss visualization of social networks.		[AP]
C931.4	Examine the methods used in community detection and mining		[AP]
C931.5	Extract human behaviour in social web and related communities.		[AN]
C931.6	Analyse different social network representations.		[AN]
Course Contents:			
MODULE I Semantic Technology for Social Network Analysis			15
Hours			
Introduction to Social Network Analysis: Limitations of current Web – Development of Semantic Web – Emergence of the Social Web. Social Network Analysis: Key concepts and measures in network analysis –Electronic sources. Ontology and their role in the Semantic Web: Ontology-based knowledge Representation – Modelling and aggregating social network data – Ontological representation of social individuals and relationships – Aggregating and reasoning with social network data.			
MODULE II Social Network Infrastructures and Communities			15 Hours
Extracting Evolution of Web Community from a Series of Web Archive- Detecting communities in social networks –Applications of community mining algorithms – Tools for detecting communities –Understanding and predicting human behavior for social communities– User data management – Inference and Distribution – Enabling new human experiences – Reality mining – Context – Awareness. Privacy in online social networks: Trust in online environment – Trust models based on subjective logic – Trust network analysis – Trust transitivity analysis – Combining trust and reputation – Trust derivation based on trust comparisons.			
MODULE III Visualization and Applications of Social Networks			15
Hours			
Graph theory – Centrality – Clustering – Node-Edge Diagrams- Matrix representation. Visualizing online social networks: Matrix-based representations– Matrix and Node-Link Diagrams – Hybrid representations. Applications: Covert networks – Community welfare – Collaboration networks – Co-Citation networks.			
Total Hours:			45

22CY931		EXPLORATORY DATA ANALYTICS	3/0/0/3
Nature of Course:		D (Theory Application)	
Pre requisites:		Basic knowledge of programming, statistics, and data science concepts	
Course Objectives:			
1.	To understand the basics of mobile device forensics, mobile operating systems and architectures		
2.	To acquire skills in the acquisition, preservation, and analysis of mobile device data.		
3.	To analyze and interpret mobile device for forensic investigations.		
4.	To outline an overview of exploratory data analysis.		
5.	To implement data visualization using Matplotlib.		
Course Outcomes:			
Upon completion of the course, students shall have ability to:			
C931.1	Understand the fundamentals of exploratory data analysis.		[U]
C931.2	Implement the data Visualization using Matplotlib.		[AP]
C931.3	Perform univariate data exploration and analysis.		[AP]
C931.4	Perform bivariate data exploration and analysis.		[AP]
C931.5	Use Data exploration and visualization techniques for multivariate and time series data.		[A]
Module 1 15 Hours EDA fundamentals – Understanding data science - Significance of EDA – Making sense of data – Comparing EDA with classical and Bayesian analysis – Software tools for EDA – Visual Aids for EDA – Data transformation techniques-merging database, reshaping, data cleaning, handling outliers, normalization, and encoding categorical data, Transformation techniques.			
Module 2 15 Hours Data Manipulation using Pandas – Pandas Objects – Data Indexing and Selection – Operating on Data – Handling Missing Data – Hierarchical Indexing – Combining datasets – Concat, Append, Merge and Join – Aggregation and grouping – Pivot Tables – Vectorized String Operations. UNIVARIATE ANALYSIS- Introduction to Single Variable: Distribution Variables – Numerical Summaries of Level and Spread – Scaling and Standardizing – Inequality.			
Module 3 15 Hours BIVARIATE ANALYSIS-Relationships between Two Variables – Percentage Tables – Analysis Contingency Tables – Handling Several Batches – Scatterplots and Resistant Lines. MULTIVARIATE AND TIME SERIES ANALYSIS - Introducing a Third Variable – Causal Explanations – Three-Variable Contingency Tables and Beyond – Fundamentals of TSA – Characteristics of time series data – Data Cleaning – Time-based indexing – Visualizing – Grouping – Resampling.

22CS902	DATA SCIENCE WITH PYTHON		3/0/0/3
Nature of Course	D (Programming)		
Prerequisites	Problem Solving using C++		
Course Objectives:			
1.	To understand the basics of Data science using python programming and OOPS functions		
2.	To have a basic understanding of the Numpy and Pandas tools for data manipulation process.		
3.	To develop a solution for real-time datasets using tools.		
4.	To gain knowledge on data analytics and data visualization.		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C902.1	Describe the fundamental programming concepts such as variables, data types, and basic operations.		[U]
C902.2	Articulate the usage of fundamental data structures like lists, tuples, dictionaries, strings, and sets for efficient data manipulation.		[AP]
C902.3	Explain the concept of Data Manipulation using Numpy and Pandas by examples.		[AP]
C902.4	Apply data wrangling skills to real-world datasets.		[AP]
C902.5	Illustrate effective and aesthetically pleasing visualizations for the datasets.		[AP]
:Module I Introduction			15
Hours			
Introduction to Data Science- Problem solving using Python			
, Data Types, Looping and conditional statements, Data structures of List-Tuple-Dictionary-String and Sets, OOPS-functions-class and objects-modules-inheritance-encapsulation-exception handling.			
Module II Data Manipulation Using NumPy and Pandas			15 Hours
Basics of NumPy Arrays: Introduction to numpy, creating numpy array, numpy manipulation, matrix in numpy, operations in numpy array, reshaping numpy array, indexing numpy array, arithmetic operations on numpy array, numpy and random data, sorting and searching in array, universal functions. Introducing Pandas Objects: pandas series, data frame, panel, basic functionalities, reading data from different files.			

Module III Data Wrangling and Data Visualization		15 Hours
Data Wrangling: Combining and Merging Datasets, Reshaping and Pivoting, Data Transformation, String Manipulation, Regular Expressions- Data Aggregation and Group Operations. Visualization in Python: Matplotlib package, Plotting Graphs, Adding Text, More Graph Types. Advanced data visualization using seaborn.

22IT922	DATA MINING		3/0/0/3
Nature of Course		D (Theory Application)	
Pre requisites		Nil	
Course Objectives:			
1.	To learn the fundamentals of data warehousing and mining.		
2.	To acquire knowledge in data pre-processing and association rule mining.		
3.	To perform data classification and clustering.		
4.	To gain knowledge about the emerging trends in data mining.		
5.	To perform classification and prediction of data.		
Course Outcomes			
Upon completion of the course, students shall have ability to			
C922.1	Understand basics of data warehousing and mining.		[U]
C922.2	Perform data pre-processing.		[AP]
C922.3	Apply association, classification and clustering methods.		[AP]
C922.4	Compare between classification and clustering solutions.		[AP]
C922.5	Analyze data mining techniques for real world problems.		[A]
C922.6	Apply association rule mining techniques for data analysis.		[AP]
Course Contents:			
Data Warehousing and Online Analytical Processing:			15 Hours
Basic Concepts, Warehouse Modeling, Schemas, Data cube, Multidimensional data model, Concept hierarchy, Dimension, Measures, OLAP operations, Starnet query model, Data warehouse design process, Data cube computation, OLAP Indexing, OLAP server architectures, OLAP and OLTP.			
Introduction to Data Mining:			15 Hours
Describe data mining, Related technologies - Machine Learning, Statistics, Stages of the Data Mining Process, Data Mining Techniques, Knowledge Representation Methods, and Applications. Data preprocessing: Experiments with H2O and Orange tools. Data mining knowledge representation: Task relevant data, Background knowledge, Representing input data and output knowledge, Visualization techniques. Attribute-oriented analysis: Attribute generalization, Attribute relevance, Class comparison, Statistical measures.			
Data Mining Algorithms:			15 Hours
Association rule mining: Apriori, FP Growth algorithms. Classification: Inferring rudimentary rules: 1R algorithm, Decision trees, covering rules. Prediction: The prediction task, Bayesian classification, Bayesian networks, Instance-based methods (nearest neighbor), Linear models. Descriptive			

analytics: Data Modeling, Trend Analysis, Simple Linear Regression Analysis. Clustering: Partitioning methods and Hierarchical methods.

Total Hours	45

VERTICAL - V

Internet of Things and Smart Cities

22CS941	IOT Architecture and Framework		3/0/0/3
Nature of Course		H (Theory Technology)	
Prerequisites		Internet of Everything	
Course Objectives:			
1	Study the fundamental concepts of Internet of Things, including Benefits, Enabling technologies.		
2	Discuss layered Architecture and modules for IoT Applications.		
3	Impart the knowledge of Embedded prototyping to develop a system.		
4	Understand IoT Frameworks to apply in industrial IoT.		
5	Introduce the concepts of data Analytics for IoT Applications.		
Course Outcomes:			
Upon completion of the course, students shall have ability to:			
C941.1	Explain the architecture and core modules of IoT.		[AP]
C941.2	Develop IoT applications using embedded systems.		[AP]
C941.3	Illustrate the necessary IoT framework required for IoT application.		[AP]
C941.4	Apply data analytics for IoT applications.		[AP]
C941.5	Analyze Industrial IoT challenges in Industry 4.0		[AN]
Course Contents:			
MODULE I IOT CONCEPTS, ENABLING TECHNOLOGIES AND ARCHITECTURE 15 Hours			
Introduction – Definition and Characteristics of IoT – Benefits of IoT – Physical and Logical design of IoT – Enabling Technologies–Resource Management – Resource Partitioning – Computation Offloading - Identification and Resource/Service Discovery – IoT Levels. ARCHITECTURE AND ITS CORE MODULES: Reference architecture for IoT – SOA based & API oriented architecture – Four-layer architecture – Seven Layer architecture – fog computing – Open stack cloud architecture – Gateways, Edge Devices, Data acquisition systems, Cloud services.			
MODULE II EMBEDDED PROTOTYPING OF IOT AND IOT FRAMEWORK 15 Hours			
Overview of Raspberry Pi – General-Purpose Input/Outputs – Sensors with Raspberry Pi – Actuators with Raspberry Pi –Web Server with Raspberry Pi – Raspberry Pi as a Database Server – ESP8266 WiFi Module – Block Diagram, Features, applications. IOT FRAMEWORK: IoT Value Chain – IoT Platforms – Cisco, Salesforce, Azure IoT, Eclipse IoT, Thingworx, GE Predix, AWS IoT, Watson IoT, Kaa.			

MODULE III INDUSTRIAL IOT AND DATA ANALYTICS		15 Hours
Introduction to Industrial Internet of Things & Industry 4.0 – IIoT Architecture – Applications and Challenges. DATA ANALYTICS: IoT Data Management – Analytics –Apache Hadoop– Programming Model, Job Execution, Hadoop Cluster. Case Studies – Smart Parking, Smart Irrigation Control, Air Pollution Monitoring.		
Total Hours:		45

22CS942	COMMUNICATION PROTOCOLS FOR IOT		3/0/0/3
Nature of Course		H (Theory Technology)	
Prerequisites		NIL	
Course Objectives:			
1	To explore the fundamental concepts of IoT protocols and standards.		
2	To examine the IoT protocol standards in data link and networking layers		
3	To assess the performance of different IoT protocols through open-source tools.		
4	To describe the security issues of protocols in IoT.		
Course Outcomes:			
Upon completion of the course, students shall have ability to:			
C942.1	Describe the evolving communication standards for IoT		[U]
C942.2	Demonstrate and visualize the data link protocols for IoT.		[AP]
C942.3	Elucidate the network protocols and standards for IoT.		[AP]
C942.4	Analyze the importance of IoT Edge devices.		[A]
C942.5	Apply security mechanisms for IoT protocol security.		[AP]
Course Contents:			
MODULE I EVOLVING IOT STANDARDS			15 Hours
Overview and Approaches – IoT Ecosystem – Protocols for IoT- Structural Aspects- Key Technologies-Sensor Technology-RFID technology – CoAP – REST – ETSI M2M - LTE-A, – WirelessHART			
MODULE II IOT PROTOCOLS			15 Hours
Z-Wave - Bluetooth Low Energy - Zigbee Smart Energy - DASH7 – HomePlug - G.9959 – LoRaWAN – Routing Protocols – RPL – CORPL – CARP - Encapsulation Protocols - 6LoWPAN- Session Layer Protocols – MQTT – SMQTT – XMPP – DDS.			
MODULE IV IOT EDGE COMPUTING			15 Hours
Edge Computing – Purpose and Definition– Edge Hardware Architectures – Operating System – Edge Platforms – Virtualisation – Containers – Use Cases – Ambient Computing – Synthetic Sensing.			
Total Hours:			45

22CS943	Cloud Services for IOT	3/0/0/3
Nature of Course	H (Theory Technology)	
Prerequisites	Internet of Things	
Course Objectives:		
1	To Understand the fundamental concepts of the cloud architecture and its services.	
2	To illustrate the various sensors and their cloud interfaces.	
3	To learn the cloud platforms of IoT services.	
4	To gain awareness on various cloud service management functionalities for IoT.	
5	To familiarize the security issues in IoT applications.	
Course Outcomes:		
Upon completion of the course, students shall have ability to:		
C943.1	Build an appropriate cloud architecture and identify the cloud services.	[AP]
C943.2	Depict various IoT sensors and actuators and facilitate cloud interfaces.	[AP]
C943.3	Formulate IoT applications using open source cloud platforms.	[AP]
C943.4	Discover the Integration of IoT applications into the cloud services.	[AP]
C943.5	Produce robust solutions for the security issues in IoT applications and networks	[AP]
Course Contents:		
MODULE I CLOUD PLATFORM ARCHITECTURE AND SERVICES		15 Hours
Cloud computing and service models: Public, Private and Hybrid clouds-Infrastructure as a service (IaaS)-Platform as a service (PaaS)-Software as a service (SaaS) - Architectural design of compute and storage clouds: Layered cloud architectural development - Architectural design challenges. Case Study: Setup a cloud platform to log the data		
MODULE II CLOUD INTERFACE AND PLATFORMS FOR IOT		15 Hours
CLOUD INTERFACE : AWS IoT, Azure IoT, Google Cloud IoT, and Apache Kafka Cloud - Setting up IoT devices on cloud platforms - IoTcloud interactions: MQTT, CoAP, HTTP - Utilizing cloud storage for IoT-generated data. CLOUD PLATFORMS: Thingspeak IoT Cloud Platform, Kaa Open Source IoT Cloud Platform, AWS IoT Cloud Platform –AWS IoT Device SDK. Arduino AWS IoT development. Raspberry Pi 3-AWS IoT development.		
MODULE III CLOUD SERVICE MANAGEMENT, SECURITY AND APPLICATIONS		15 Hours
Service management in cloud computing - Service Level Agreements (SLAs), Managing IoT data –		

Looking at Data, Scalability & cloud services, Database & data stores in cloud, Large scale data processing. Safety and vulnerability in cloud network- IoT Security and Privacy Preservation - Security and challenges in mobile cloud computing- Fog computing characteristics in IoT security.	
Total Hours:	
45

22CS944	IoT for Healthcare		3/0/0/3
Nature of Course		H (Theory Technology)	
Prerequisites		Internet of Things	
Course Objectives:			
1	Estimate the different levels of IoT and templates for deployment.		
2	Explore the connectivity of sensors and actuators in IoT for WBAN.		
3	Interpret routing protocols used in medical IoT devices.		
4	Design and develop location based IoT healthcare solutions.		
5	Employ real world applications of IoT in healthcare.		
Course Outcomes:			
Upon completion of the course, students shall have ability to:			
C944.1	Illustrate the various designs of IoT.		[AP]
C944.2	Determine the enabling technologies of IoT.		[AP]
C944.3	Articulate big data analytics in Medical IoT devices.		[AP]
C944.4	Interpret mobility in location based IoT systems.		[AP]
C944.5	Evaluate the performance of IoT applications in healthcare.		[A]
MODULE I INTRODUCTION TO IOT			15 Hours
Introduction to IoT – Physical design of IoT – Logical design of IoT – IoT enabling technologies – IoT levels and deployment templates – Cloud computing – Deployment models – Service models – Service management – Cloud security – Communication protocols – CoAP – MQTT.			
MODULE II BIG DATA AND WBAN IN IOT			15 Hours
IoT in Healthcare – Challenges in current healthcare systems – IoT healthcare services – Big data in IoT – Architecture of apache flume and spark – Wireless Body Area Networks (WBAN) Routing Protocols – Medium access control – Issues of WBAN.			
MODULE III DOMAIN SPECIFIC IOTs			15 Hours
Wearable sensor network for remote health monitoring – IoT based location aware smart healthcare framework – Analysis of recovery of mobility through inertial navigation techniques and virtual reality – Case Studies - Control and remote monitoring of muscle activity and simulation in the rehabilitation process.			
Total Hours:			45

22CS945			Intelligent Transport Systems											3/0/0/3		
Nature of Course				H (Theory Technology)												

Prerequisites		-
Course Objectives:		
1	To introduce the fundamentals and architecture of Intelligent Transportation Systems (ITS).	
2	To explore the challenges and opportunities of implementing ITS	
3	To study the application of ITS technologies in public transport and safety for vulnerable road users.	
4	To familiarize students with ITS standards, specifications, and their global practices.	
5	To examine the role of ITS in smart city development and its impact on urban transportation systems.	
Course Outcomes:		
Upon completion of the course, students shall have ability to:		
C945.1	Explain the core principles and structural design of Intelligent Transportation Systems (ITS)	[U]
C945.2	Examine the role and architecture of ITS in addressing transportation challenges.	[AP]
C945.3	Illustrate the application of ITS technologies for enhancing public transport operations.	[AP]
C945.4	Employ the safety requirements for vulnerable road users and the role of ITS in enforcing traffic rules.	[AP]
C945.5	Analyze the Smart city scenario and Apply ITS standards and technologies to develop solutions for smart city transportation systems in developing countries	[A]
MODULE I ITS FUNDAMENTALS AND ARCHITECTURE		
ITS Fundamentals: Introduction to Intelligent Transportation Systems (ITS) – Historical Background – Transport System Characteristics – Transport Problems and Issues – Functions of ITS Components – Importance of ITS Architecture – Challenges and Opportunities in ITS – Role and Importance of ITS in Context of Indian Transport System. ITS Architecture: Functionalities Required for User Service - Logical Architecture – Physical Architecture – Organisational Architecture -Equipment Packages – Market Package.		
MODULE II ITS for Public Transport and Vulnerable Road Users		
ITS for Public Transport: Introduction – ITS operations for Public Transport – Transport Integrated Management Solutions – Best Practices in Public Transport – Advanced Vehicle Control and Safety Systems – Emergency Management – Transport Demand Management – Application of ITS forTransport Demand Management. Vulnerable Road Users (VRU): Introduction - Need for VRU's Safety – ITS Technologies for VRU's – ITS Technologies to enforce Traffic Rules – Detection of		

Violations.

MODULE III ITS Standards and ITS for Smart Cities

ITS Standards and specifications: ISO – ETSI – ITS Standardisation Committee, Japan, ITS Joint Programme Office, US, ATCS – RLVD – Speed Violation Detection System - ANPR – AVLS – PIS

ITS for Smart Cities: Introduction – Strategies and Approaches to Smart City – Smart Cities Mission Statement and Guidelines - ITS Solutions for Smart Cities – ITS technologies for Smart City.

Case Studies: Dublin, Ireland– ITS in Japan - London, UK - Delhi Transport Corporation, India - Mysore, India.

Total Hours: 45

22CS946	IOT for Smart Cities and Buildings		3/0/0/3
Nature of Course		H (Theory Technology)	
Prerequisites		Internet of Things	
Course Objectives:			
1	To Understand the fundamental Concepts of Internet of Things.		
2	To learn IoT Architecture and Terminologies.		
3	To acquire knowledge on IoT working platform for different system.		
4	To gain awareness on various IoT standards for smart city planning.		
5	To familiarize IoT applications on different sectors.		
Course Outcomes:			
Upon completion of the course, students shall have ability to:			
C946.1	Explain the different concepts and theories of Internet of Things.		[U]
C946.2	Assess the various components of IoT architecture.		[U]
C946.3	Perform the IoT applications in programming platform.		[AP]
C946.4	Adopt the IoT standards for smart city planning.		[AP]
C946.5	Apply the understandings of IoT in different sectors of smart city planning.		[AP]
Course Contents:			
MODULE I INTRODUCTION TO IOT AND ARCHITECTURE			15 Hours
Overview and Introduction - Internet of Things (IoT) - Web of Things (WoT) - Cloud of Things - Need for IoT on Cloud - Services in the Cloud for the Internet of Things - Applications of IoT – Detailed Domain Model. IOT ARCHITECTURE: IoT Architecture - Sensor Layer - Gateway and Network Layer - Management Service Layer - Application Layer - IoT Enabling Technologies - Addressing Schemes - Data Storage and Analytics – Visualization - Connected Domains – Connected Home - Connected Worker - Connected Automobile - Connected Industry.			
MODULE II IOT PLATFORMS DESIGN METHODOLOGY			15 Hours
IoT Systems – Intel IoT Framework - Qualcomm IoT Framework - Microsoft IoT Framework - ARM IoT Framework - Logical Design - Programming IoT platform (eg: Python, Mono C# , Objective-C, Ruby), Raspberry Pi - Program for Firmware – Case Studies.			
MODULE III IOT STANDARDS AND APPLICATIONS			15 Hours
IOT STANDARDS: Need for the IOT standards - IOT and Smart City Standards and Policies: Global perspective – Policy Research and Standardization in Europe – Indian Standards formulation – Sectional committee and composition – Challenges in standardization - Digital infrastructure. IOT APPLICATIONS: Lighting as service – Smart Parking -Smart metering – Smart water management-			

Smart energy– Smart solid waste management - Smart mobility – Smart governance- Challenges in IoT Management.

22CS947		Industrial IoT												3/0/0/3		
Nature of Course				H (Theory Technology)												

Prerequisites		Internet of Everything	
Course Objectives:			
1	Understand the fundamental concepts of IIOT, technical aspects.		
2	Study and understand IIOT Architecture with its topology.		
3	Explore the difference between networks and architectures of IIoT		
4	Investigate the predictive analysis used in Industrial IoT.		
5	Identify automation tools applied for manufacturing process		
Course Outcomes:			
Upon completion of the course, students shall have ability to:			
C947.1	Illustrate technical aspects and architecture of Industrial Internet of Things.		[AP]
C947.2	Discover product representation for developing smart design.		[AP]
C947.3	Analyse various network technologies with respect to IIOT.		[AN]
C947.4	Evaluate the predictive analytics involved in intelligent manufacturing.		[AP]
C947.5	Apply the automation tools required in manufacturing process		[AP]
Course Contents:			
MODULE I INDUSTRY 4.0 AND IIOT TECHNICAL ASPECTS 15 Hours			
Introduction to Industry revolution- Evolution of Industry 1.0 to Industry 5.0-IIOT-Power of 1%- Key IoT technologies- Cobots, Human Factors involved- Innovation in IIoT intelligent devices- Challenges and benefits of Industry 5.0-IIoT applications – health care, Oil and Gas Industry, Smart Office, Logistics. IIOT TECHNICAL ASPECTS: Miniaturization-Cyber Physical Systems (CPS)- Wireless technology-IP technology-Network Functional Virtualization (NFV)- Network Virtualization (NV)- Software-defined network (SDN)- NFV vs SDN- smart phones- cloud and fog- big data analytics- M2M learning and AI- Augmented Reality and Virtual Reality- 3D Printing- People vs Automation.			
MODULE II IIOT ARCHITECTURE AND SMART DESIGN 15 Hours			
IIC reference architecture- Industrial Internet Architecture Framework (IIAF)- Implementation-architecture topology- Three-tier topology: edge tier, platform tier, enterprise tier, gateway mediated edge, connectivity, key system characteristics, data management. SMART DESIGN: Introduction - Smart Design - Digital Tools, Product representation and exchange technologies and standards, Agile (Additive) Manufacturing Systems and standards.			

MODULE III INTELLIGENT MANUFACTURING AND SMART MACHINES		15 Hours
Introduction- Cloud manufacturing- IIoT enabled manufacturing- intelligent manufacturing- intelligent manufacturing platforms – GE predix, PTC thingworx, SIEMENS: smart factory- predictive analytics – Google Cloud ML platform, Microsoft Azure. SMART MACHINES: Mass customization, Smart Machine Tools, Robotics and Automation (perception, manipulation, mobility, autonomy) - Smart manufacturing systems - design & Analysis, planning & control.		
Total Hours:		45

22CS948	IOT for Smart Grids		3/0/0/3
Nature of Course		H (Theory Technology)	
Prerequisites		Internet of Things	
Course Objectives:			
1	Interpret the priority areas of smart grid.		
2	Employ advanced metering infrastructure for an IoT smart grid device.		
3	Illustrate the smart grid designs and renewable integration.		
4	Design and develop static and dynamic optimization techniques.		
5	Employ real world applications of IoT in smart grid.		
Course Outcomes:			
Upon completion of the course, students shall have ability to:			
C948.1	Determine smart-grid activities in India.		[AP]
C948.2	Illustrate IP based systems for smart grid.		[AP]
C948.3	Discover supervisory control and data acquisition system.		[AP]
C948.4	Evaluate energy management in smart grid.		[AP]
C948.5	Examine the tools and techniques for smart grid.		[A]
Course Contents:			
MODULE I INTRODUCTION TO SMART GRID			15 Hours
Basics of power systems, definition of smart grid, need for smart grid, smart grid domain, enablers of smart grid, smart grid priority areas, regulatory challenges, smart-grid activities in India.			
MODULE II SMART GRID ARCHITECTURE			15 Hours
Smart grid architecture, standards-policies, smart-grid control layer and elements, network architectures, IP-based systems, power line communications, supervisory control and data acquisition system, advanced metering infrastructure. The fundamental components of Smart Grid designs, Transmission Automation, Distribution Automation, Renewable Integration.			
MODULE III TOOLS AND TECHNIQUES FOR SMART GRID			15 Hours
Computational Techniques – Static and Dynamic Optimization Techniques for power applications such as Economic load dispatch – Computational Intelligence Techniques – Evolutionary Algorithms in power system – Artificial Intelligence techniques and applications in power system.			
Total Hours:			45

22CS949	BIG DATA ANALYTICS FOR IOT		3/0/0/3
Nature of Course		H (Theory Technology)	
Prerequisites		NIL	
Course Objectives:			
1	To gain exposure to the significance of Big data analytics for IoT		
2	To get familiarity on IoT semantics and big data streaming analytics.		
3	To be aware with the strategies for processing IoT data through data analytics		
4	To identify suitable applications that makes use of multimedia Big Data and IoT		
5	To implement smart systems using Big Data and IoT		
Course Outcomes:			
Upon completion of the course, students shall have ability to:			
C949.1	Integrate big data and IoT for IoT analytics		[U]
C949.2	Extract semantics by processing IoT real-time and linked stream data		[AP]
C949.3	Process and handle IoT Big data using Apache Hadoop		[AP]
C949.4	Perform analytics with multimedia Big Data and IoT		[AP]
C949.5	Design and implement smart IoT systems with big data.		[AP]
Course Contents:			
MODULE I BIG DATA INTEGRATION FOR IOT ANALYTICS			15 Hours
IoT data and Big data – Challenges of IoT analytics applications – IoT analytics life cycle and techniques –Searching the Internet of Things: Search Architecture for Social and Physical Sensors - Local Event Retrieval - Using Sensor Metadata Streams to Identify Topics of Local Events in the City – Venue Recommendation			
MODULE II DATA STREAMING ANALYTICS AND PROCESSING OF IOT BIG DATA			15 Hours
Linking data - Real-time & Linked Stream Processing - Semantic-based Distributed Reasoning - Cross-Domain Recommender Systems - Semantic Analytics - Semantic Modelling and Validation Tools - Data Reasoning - Ethical IoT- Stream processing for handling real-time IoT data - Big data processing frameworks: Apache Hadoop, Apache Spark, Hive, and Vertica. Data stream processing using machine learning.			
MODULE III MULTIMEDIA BIGDATA COMPUTING FOR IOT AND CASE STUDY			15 Hours
Characteristics of Multimedia Bigdata – Multimedia Big Data Life Cycle - Processing and analysing			

images and videos from IoT devices – Processing methods for speech and audio data in IoT environments - Integration of data from multiple modalities in IoT- Precision Agriculture and optimized farming - Health monitoring and personalized medicine – Predictive maintenance in industries.

Total Hours: 45

Machine Learning

22CS951	Computer Vision	3/0/0/3
Nature of Course	H (Theory Technology)	
Prerequisites	Image Processing	
Course Objectives:		
1	Understand the fundamental concepts related to Image formation and processing.	
2	Learn feature detection, matching and detection.	
3	Familiar with feature-based alignment and motion estimation.	
4	Develop skills on 3D reconstruction.	
5	Understand image-based rendering and recognition.	
Course Outcomes:		
Upon completion of the course, students shall have ability to:		
C951.1	Apply low level processing of image and transformation techniques to images.	[AP]
C951.2	Demonstrate the use of feature extraction, segmentation, and object recognition methods in various computer vision applications.	[AP]
C951.3	Apply 2D a feature-based based image alignment, segmentation and motion estimations.	[AP]
C951.4	Apply 3D image reconstruction techniques.	[AP]
C951.5	Design and develop innovative image processing and computer vision applications.	[AP]
Course Contents:		
MODULE I IMAGE FORMATION, PROCESSING AND FEATURE DETECTION		
IMAGE FORMATION AND PROCESSING: Computer Vision - Geometric primitives and transformations - Photometric image formation – The digital camera - Point operators - Linear filtering - More neighborhood operators – Fourier transforms - Pyramids and wavelets - Geometric transformations - Global optimization. FEATURE DETECTION, MATCHING AND SEGMENTATION: Points and patches - Edges - Lines - Segmentation - Active contours - Split and merge - Mean shift and mode finding - Normalized cuts - Graph cuts and energy-based methods.		
MODULE II ALIGNMENT, MOTION ESTIMATION AND 3D RECONSTRUCTION		
ALIGNEMENT AND MOTION ESTIMATION :2D and 3D feature-based alignment - Pose estimation - Geometric intrinsic calibration -Triangulation - Two-frame structure from motion - Factorization - Bundle adjustment – Constrained structure and motion - Translational alignment - Parametric motion - Spline-based motion – Optical flow - Layered motion. 3D RECONSTRUCTION: Shape from X - Active range finding - Surface representations - Point-based representations Volumetric representations - Model-based reconstruction - Recovering texture maps and albedos.		
MODULE III ADVANCED 3D RECONSTRUCTION, RENDERING, AND RECOGNITION		

ADVANCED 3D RECONSTRUCTION: Multi-View Stereo and Photogrammetry - SLAM (Simultaneous Localization and Mapping). RENDERING: View interpolation Layered depth images - Light fields and Lumigraphs - Environment mattes - Video-based rendering. RECOGNITION: Object detection - Face recognition - Instance recognition – Category recognition - Context and scene understanding- Recognition databases and test sets. Case studies - Analysis of notable 3D reconstruction projects - Hands-on project: Building a simple 3D model using photogrammetry-Discussion of challenges and future trends in 3D reconstruction.

22CS952	Feature Engineering		3/0/0/3
Nature of Course		H (Theory Technology)	
Prerequisites		NIL	
Course Objectives:			
1	Understanding the prelims of Feature Engineering		
2	Understanding the various Processes of Feature Engineering		
3	Understanding the various Feature Engineering Techniques		
4	Apply various Feature Engineering model for real-world problems		
Course Outcomes:			
Upon completion of the course, students shall have the ability to:			
C952.1	Articulate different strategies for dealing with data		[AP]
C952.2	Infer feature selection and evaluation frameworks		[A]
C952.3	Develop the methods for Patten-Based Feature Engineering		[AP]
C952.4	Apply feature engineering model for a given real-world problem like Social Bot detection and Twitter-based platform		[AP]
C952.5	Identify applications suitable for software analytics with justification.		[AP]
Course Contents:			
MODULE I OVERVIEW OF FEATURE ENGINEERING AND ITS DATA TYPES			15 Hours
Machine Learning Pipeline – Simple Data Types: Scalars, Vectors, and Spaces – Dealing with counts – Log Transformation – Feature Scaling or Normalization – Interaction Features – Feature Selection – Text Data: Bag-of-X – Filtering for Cleaner Features – Atoms of Meaning. Visual Data: Classical and Visual Feature Representation – Latent Feature Extraction – Deep Image Features			
MODULE II GENERAL FEATURE ENGINEERING TECHNIQUES			15 Hours
Feature Selection and Evaluation: Feature Selection Frameworks – Advanced Topics for Feature Selection. Pattern-based Feature Engineering: Preliminaries – Framework of Pattern-based Feature Generation – Pattern Mining Algorithms – Pattern Selection Approaches – Pattern-based Feature Generation - Pattern-based Feature Generation for Classification - Pattern-based Feature Generation for Clustering			
MODULE III FEATURE ENGINEERING APPLICATIONS			15 Hours
Social Bot Detection: Introduction – Social Bot Detection – Online Bot Detection Framework. Software Analytics: Features for Defect Prediction – Features for Crash Release Prediction for Apps – Features from Mining Monthly Reports to Predict Developer Turnover. Twitter-based Applications: Data Present in a Tweet – Common Types of Features Used in Twitter-based			

Applications – Twitter Feature Engineering in Selected Twitter-based studies – Twitris: A real-time Social Media Analysis Platform.

22CS953	Deep Neural Networks	3/0/0/3
Nature of Course	H (Theory Technology)	
Prerequisites	Computational fundamentals of machine learning	
Course Objectives:		
1	To Understand the neural network concepts including single layer and multi-layer perceptron's, activation functions, and the representation power of MLPs.	
2	To Learn about deep learning fundamentals, deep feedforward networks, and advanced optimization techniques such as Gradient Descent variants and Adam. Explore regularization techniques to enhance model performance.	
3	To Acquire practical skills in designing and implementing CNNs and RNNs, understanding their architecture, and applying them to real-world datasets like MNIST for CNNs and text data for RNNs.	
4	To Address common problems in training neural networks such as overfitting, vanishing and exploding gradients, and other computational challenges.	
5	To learn and apply neural network models to complex problems in fields such as natural language processing and image recognition.	
Course Outcomes:		
Upon completion of the course, students shall have ability to:		
C953.1	Illustrate the basic concepts of neural networks and its practical issues.	[AP]
C953.2	Outline the standard regularization and optimization techniques for deep neural networks	[U]
C953.3	Develop, optimize, and regularize deep learning models using advanced techniques and apply them to complex real-world problems.	[AP]
C953.4	Build CNN and RNN models for different use cases.	[AP]
C953.5	Explain the concepts of modern RNNs like LSTM, GRU	[U]
MODULE I INTRODUCTION OF NEURAL NETWORKS		
Introduction to neural networks -Single layer perceptrons, Multi Layer Perceptrons (MLPs), Representation Power of MLPs, Activation functions - Sigmoid, Tanh, ReLU, Softmax. Risk minimization, Loss function, Training MLPs with backpropagation, Practical issues in neural network training - The Problem of Overfitting, Vanishing and exploding gradient problems, Difficulties in convergence, Local and spurious Optima, Computational Challenges. Applications of neural networks.		
MODULE II DEEP LEARNING		
Introduction to deep learning, Deep feed forward network, Training deep models, Optimization techniques - Gradient Descent (GD), GD with momentum, Nesterov accelerated GD, Stochastic GD, AdaGrad, RMSProp, Adam. Regularization Techniques - L1 and L2 regularization, Early stopping, Dataset augmentation, Parameter sharing and tying, Injecting noise at input, Ensemble methods,		

Dropout, Parameter initialization.

MODULE III CNN and RNN

Convolutional Neural Networks – Convolution operation, Motivation, Pooling, Convolution and Pooling as an infinitely strong prior, Variants of convolution functions, Structured outputs, Data types, Efficient convolution algorithms. Practical use cases for CNNs, Case study - Building CNN model AlexNet with handwritten digit dataset MNIST. Recurrent neural networks – Computational graphs, RNN design, encoder – decoder sequence to sequence architectures, deep recurrent networks, recursive neural networks, modern RNNs LSTM and GRU, Practical use cases for RNNs. Case study - Natural Language Processing.

Total Hours: 45

22CS954	Optimization Techniques	3/0/0/3
Nature of Course	H (Theory Analytical)	
Course Objectives:		
1	To formulate and solve optimization problems using linear and non-linear programming techniques.	
2	To understand and apply methods to optimize job sequencing and machine scheduling.	
3	To explore decision-making tools for various scenarios, including certainty, uncertainty, and risk.	
4	To gain insights into competitive strategies through the study of game theory.	
5	To develop skills in project scheduling, including network planning and critical path analysis.	
Course Outcomes:		
Upon completion of the course, students shall have ability to:		
C954.1	Illustrate the fundamental concepts of linear and non-linear programming, including the formulation of LPP and NLPP.	[AP]
C954.2	Interpret graphical methods to solve linear programming problems and address special cases like multiple solutions and infeasibility.	[AP]
C954.3	Construct sequencing models for job processing and make decisions using decision theory under different conditions.	[AP]
C954.4	Choose game theory models and strategies to solve competitive situations and assess their practical limitations.	[AP]
C954.5	Categorize optimized project schedules using PERT/CPM techniques for effective time-cost management in complex projects.	[A]
MODULE I Linear and Non-Linear Programming		15 Hours
Mathematical Formulation of Linear Programming Problems (LPP)-Basics of linear programming-Constructing the objective function and constraints- Graphical Solution of LPP:Feasible region-Optimality and special cases: Multiple optimal solutions, unbounded solutions, and infeasibility- General Non-Linear Programming Problems (NLPP):Differences between linear and non-linear programming-Formulating non-linear problems- Constrained Optimization:Optimization with equality and inequality constraints-Techniques such as Lagrange multipliers and Kuhn-Tucker conditions.		
MODULE II Sequencing Models & Decision Theory		15 Hours

Sequencing Models: Introduction to sequencing problems and assumptions-Processing nnn jobs through one, two, and multiple machines-Algorithms and methods for optimal sequencing-Practical problems related to sequencing- Decision Theory: Decision making in various environments (certainty, uncertainty, risk)-Decision tree analysis-Utility theory and decision making with utilities															
MODULE III Game Theory & Network Scheduling														15 Hours	
Game Theory: Fundamentals of game theory and its applications-Characteristics of games and different game models-Mixed strategies and nnn-person zero-sum games-Limitations and practical applications of game theory- Network Scheduling using PERT/CPM: Rules for network construction-Critical path analysis and probability considerations in PERT-Differences between PERT and CPM-Resource analysis and time-cost optimization in network scheduling

3	Strongly agreed		2	Moderately agreed		1	Reasonably agreed								

22CS955	Advanced Learning Algorithms	3/0/0/3
Nature of Course	H (Theory Technology)	
Prerequisites	Introduction to Machine Learning	
Course Objectives:		
1	To understand the concepts of neural network and TensorFlow framework.	
2	To build and train a neural network with TensorFlow to perform multi-class classification.	
3	Use the best practices of machine learning development so that your models generalize data and tasks in the real world.	
4	Understand the concepts of decision trees and its variations.	
5	To create decision trees using different ensemble models.	
Course Outcomes:		
Upon completion of the course, students shall have ability to:		
C955.1	Apply the concepts of Neural Networks to make predictions.	[AP]
C955.2	Illustrate the TensorFlow framework to build neural network.	[AP]
C955.3	Apply machine learning models to develop solutions to the real world problems.	[AP]
C955.4	Analyze the machine learning cycle, training and evaluation to improve performance.	[A]
C955.5	Build decision trees using ensemble methods for random forests and boosted trees.	[AP]
Course Contents:		
MODULE I INTRODUCTION TO NEURAL NETWORKS AND NEURAL NETWORK TRAINING		
Neurons and the brain - Demand Prediction - Example: Recognizing Images - Neural network layer - More complex neural networks - Inference: making predictions (forward propagation) - Inference in Code - Data in TensorFlow - Building a neural network - Forward prop in a single layer - General implementation of forward propagation - Matrix multiplication rules. TensorFlow implementation - Alternatives to the sigmoid activation - Choosing activation functions - Neural Network with Softmax output - Classification with multiple outputs - Advanced Optimization.		
MODULE II TRAINING AND EVALUATION		
Evaluating a model - Model selection and training/cross validation/test sets - Diagnosing bias and variance - Regularization and bias/variance - Establishing a baseline level of performance - Learning curves - Deciding what to try next revisited - Bias/variance and neural networks - Iterative loop of ML development - Error analysis - Adding data - Transfer learning: using data from a different task - Full		

cycle of a machine learning project - Fairness, bias, and ethics - Error metrics for skewed datasets - Trading off precision and recall.

MODULE III DECISION TREES

Decision tree model - Learning Process - Measuring purity - Choosing a split: Information Gain - Using one-hot encoding of categorical features - Continuous valued features - Regression Trees - Using multiple decision trees - Sampling with replacement - Random forest algorithm – XGBoost – Case Study: Andrew Ng and Chris Manning on Natural Language Processing.

22CS956		Scalable Machine Learning		3/0/0/3	
Nature of Course		H (Theory Technology)			
Prerequisites		Random Variables and Statistics			
Course Objectives:					
1	Understand the key principles and challenges associated with scalability in machine learning				
2	Explore the distributed computing frameworks, such as Apache Spark and Hadoop, to process large datasets and implement scalable machine learning algorithms.				
3	Learn to design, train, and optimize machine learning models using advanced techniques, including parallel and distributed processing, to ensure they perform well on large-scale data.				
4	Acquire the skills to deploy machine learning models in production environments using cloud-based platforms.				
5	Develop the ability to apply scalable machine learning techniques to practical, real-world problems across various domains, ensuring that models can handle data growth and real-time processing requirements.				
Course Outcomes:					
Upon completion of the course, students shall have ability to:					
C956.1	Apply advanced techniques such as parallel and distributed processing to design, train, and optimize machine learning models.				[AP]
C956.2	Illustrate distributed hyper parameter tuning frameworks to improve models at scale.				[AP]
C956.3	Solve practical, real-world problems by implementing scalable machine learning models capable of processing large datasets in real time.				[AP]
C956.4	Use advancements in scalable deep learning architectures and predict future trends in distributed AI.				[A]
C956.5	Analyze privacy-preserving techniques and ethical issues in scalable machine learning				[A]
Course Contents:					
MODULE I INTRODUCTION TO SCALABLE MACHINE LEARNING					15
Hours					
Understanding Scalability in Machine Learning-Definitions and importance of scalability - Challenges in scaling traditional machine learning models - Overview of large-scale data processing - Distributed Computing and Parallelism-Introduction to distributed computing concepts - Parallel vs. distributed computing - MapReduce and its application in machine learning - Case study: Using					

Hadoop/Spark for data processing - **Big Data Frameworks for Machine Learning** - Introduction to Apache Spark and Hadoop - Hands-on: Setting up a Spark environment -Implementing machine learning algorithms using MLlib in Spark - Distributed data storage (HDFS, NoSQL) **Case Studies and Applications** Real-world applications of scalable machine learning.

MODULE II ADVANCED TECHNIQUES IN SCALABLE MACHINE LEARNING
Hours

15

Model Training on Large Datasets - Techniques for handling large datasets (batch processing, mini-batch gradient descent) - Distributed model training -Model parallelism and data parallelism - **Model Optimization and Hyperparameter Tuning** - Scalable hyperparameter tuning methods (Grid Search, Random Search, Bayesian Optimization) - Distributed hyperparameter tuning frameworks (e.g., Hyperopt, Ray Tune) - **Case study:** Tuning models for performance at scale - **Model Deployment at Scale** - Containerization and orchestration (Docker, Kubernetes) - Serving models in production environments (TensorFlow Serving, MLflow, Seldon) - A/B testing and model monitoring at scale

MODULE III SPECIALIZED TOPICS IN SCALABLE MACHINE LEARNING
Hours

15

Scalable Deep Learning - Deep learning architectures and their scalability challenges - Distributed training techniques for deep learning (Horovod, PyTorch Distributed) - Hands-on: Training deep neural networks at scale using Horovod - Discussion on recent advancements and future directions - **Real-Time Machine Learning and Streaming Data** - Introduction to real-time machine learning and streaming data processing - Frameworks for real-time ML (Apache Kafka, Apache Flink, Spark Streaming) - Hands-on: Building and deploying real-time ML models using Spark Streaming and Kafka - **Case study:** Real-time recommendation engines and anomaly detection - **Ethics, Privacy, and Fairness in Scalable ML** - Ethical considerations in scalable machine learning - Privacy-preserving machine learning techniques (Federated Learning, Differential Privacy) - Fairness in machine learning at scale - Discussion on the societal impact of large-scale AI systems.

22CS957	Mathematics for Machine Learning		3/0/0/3
Nature of Course		H (Theory Technology)	
Prerequisites		-	
Course Objectives:			
1	To equip students with the mathematical foundations essential for understanding and developing machine learning algorithms.		
2	To enable students to apply linear algebra, calculus, probability, and optimization techniques to machine learning models and data-driven decision-making.		
3	To cultivate analytical and problem-solving skills through the use of mathematical tools in designing, training, and evaluating machine learning models.		
Course Outcomes:			
Upon completion of the course, students shall have the ability to:			
C957.1	Analyze and apply linear algebra concepts such as vector spaces, eigenvalues, and singular value decomposition (SVD) to machine learning models.	[AN]	
C957.2	Demonstrate the ability to use multivariate calculus to optimize machine learning algorithms, including gradient-based methods.	[AP]	
C957.3	Apply probability theory and statistical methods for understanding uncertainty and constructing probabilistic models in machine learning.	[AP]	
C957.4	Design and implement optimization techniques, such as convex optimization, for improving the efficiency and performance of machine learning algorithms.	[AP]	
C957.5	Evaluate and integrate various mathematical techniques to solve real-world machine learning problems and perform model evaluation.	[EV]	
MODULE I Linear Algebra for Machine Learning			15 Hours
Introduction to Machine Learning – Types of Machine Learning – Basic Concepts in Machine Learning Supervised Learning – Unsupervised Learning. Vector Spaces and Linear Transformations: Scalars, vectors, matrices, matrix operations, matrix inversion, properties of vector spaces. Eigenvalues and Eigenvectors: Importance of eigenvalues in data representation, Principal Component Analysis (PCA), Singular Value Decomposition (SVD). Applications in Machine Learning: Data transformations, dimensionality reduction, and feature extraction using SVD and PCA.			
MODULE II Multivariate Calculus and Optimization			15 Hours
Multivariate Functions: Partial derivatives, gradient, Hessian, and Jacobian matrix. Optimization Techniques: Gradient Descent, Newton’s method, stochastic gradient descent, convergence rates, and regularization techniques. Applications in Machine Learning: Cost function optimization for linear regression, logistic regression, neural networks, and support vector machines (SVM).			

MODULE III Probability and Statistics for Machine Learning		15 Hours
Probability Theory: Basics of probability, conditional probability, Bayes' theorem, random variables, expectation, variance, covariance. Statistical Inference: Probability distributions (Gaussian, Binomial, Poisson), maximum likelihood estimation, and hypothesis testing. Applications in Machine Learning: Probabilistic reasoning, Naive Bayes classifier, Gaussian Mixture Models (GMM), Hidden Markov Models (HMM), and Bayesian networks.		
Total Hours:		45

22CS958	GENERATIVE ADVERSARIAL NETWORKS		3/0/0/3
Nature of Course		H (Theory Technology)	
Prerequisites			
Course Objectives:			
1	Understand the fundamental concepts and principles of Generative Adversarial Networks (GANs), including the architecture, training process, and applications.		
2	Design and implement GAN models using popular deep learning frameworks such as TensorFlow or PyTorch.		
3	Apply GANs to real-world problems, such as generating realistic images, videos, and music, as well as enhancing image quality and resolving data scarcity issues.		
4	Analyze and evaluate the performance of GANs in various tasks, including image generation, data augmentation, and style transfer.		
5	6. Stay up-to-date with recent advancements and breakthroughs in GAN research, including conditional GANs, progressive GANs, and StyleGANs and demonstrate critical thinking and problem-solving skills in applying GANs to novel applications and domains.		
Course Outcomes:			
Upon completion of the course, students shall have ability to:			
C958.1	Summarize the fundamental concept of Generative Adversarial Networks (GANs), including autoencoders.		[U]
C958.2	Implement Variational Autoencoders (VAEs), including the encoder, loss function, and training procedures.		[AP]
C958.3	Illustrate the concept of deep neural networks and multilayer perceptrons (MLPs).		[AP]
C958.4	Apply GANs to real-world problems, including generating shapes and face aging.		[AP]
C958.5	Identity image style transfer across various domains using deep learning techniques.		[AN]
MODULE I INTRODUCTION		15 Hours	
Introduction to GANs– Auto encoders as a Path to GANs – Basic Concepts in Deep Convolutional GAN (DCGAN) – Training and Common Challenges: GANing for Success. Working functionalities of GAN – MNIST digit generation using GAN in Tensorflow – DCGAN for MNIST digits – GAN Architectures: SRGAN, CycleGAN – Applications of GAN.			
MODULE II GENERATIVE DEEP LEARNING		15 Hours	

Generative Modeling – Our First Generative Model – Core Probability Theory – Generative Model Taxonomy – The Generative Deep Learning Codebase – Deep Neural Networks – Multilayer Perceptron (MLP) – Variational Autoencoders: The Encoder- The Loss Function- Training the Variational Autoencoder- Analysis of the Variational Autoencoder. **Case study on The CarRacing Environment using world model.**

MODULE III LEARNING GENERATIVE ADVERSARIAL NETWORKS

15 Hours

Introduction to Deep Learning - Unsupervised Learning with GAN- Transfer Image Style Across Various Domains - Building Realistic Images from Your Text - Using Various Generative Models to Generate Images - Taking Machine Learning to Production.

Total Hours:

45

22CS959		Deep Learning Frameworks		3/0/0/3	
Nature of Course		H (Theory Technology)			
Prerequisites		-			
Course Objectives:					
1		Develop and Implement Complex Deep Learning Models			
2		Leverage Model Serialization and Deployment:			
3		Apply Advanced Hyperparameter Tuning Techniques			
4		Master Advanced Architectures for NLP and Computer Vision			
5		Evaluate Frameworks for Complex Tasks and Big Data			
Course Outcomes:					
Upon completion of the course, students shall have ability to:					
C959.1		Apply Core Deep Learning Concepts Using Leading Frameworks TensorFlow and Pytorch.			[AP]
C959.2		Develop complex models and applying model serialization techniques for real-world applications.			[AP]
C959.3		Analyze different hyperparameter tuning techniques in TensorFlow and PyTorch and evaluate how different methods affect the model's speed and accuracy.			[AN]
C959.4		Implement advanced architectures for Natural Language Processing tasks and Computer Vision tasks.			[AP]
C959.5		Analyze the performance of various deep learning frameworks in specialized applications for handling complex tasks and big data.			[AN]
Course Contents:					
MODULE I Introduction to Deep Learning Frameworks				15 Hours	
Overview of Deep Learning – Introduction to Neural Networks - Key Concepts in Deep Learning (Activation Functions, Loss Functions, Optimizers) - Model Training, Validation, and Testing- Deep Learning Frameworks: Importance of frameworks in Deep Learning - Popular frameworks(Tensorflow, Pytorch, Keras, MXNet) - TensorFlow: Introduction-, Tensor Operations and Graphs- Tensorflow Keras API - PyTorch: Autograd, and Neural Network Module.					
MODULE II Advanced Concepts and Model Development				15 Hours	
Model Development using Tensorflow keras API and Pytorch -Working with Custom Layers in Tensorflow - Model Serialization and Loading Pre-trained Models - TFX for Prodcution, Building complex models using pytorch - Custom Layers and Model Subclassing in Pytorch - Pytorch Lightning for structured model development, Hyperparameter Tuning and Optimization: Techniques for					

Structured model development- using tensorflow and Pytorch for Hyperparameter Optimization.

MODULE III Specialized Applications

15 Hours

Natural Language Processing with Deep Learning Frameworks: Text Preprocessing and Embedding Techniques- Building RNNs, LSTMs, and Transformers - BERT-GPT- **Computer Vision with Deep Learning Frameworks:** Image Preprocessing and Data Augmentation - Building CNNs, ResNets and GANs- VGG,Inception and EfficientNet-**Case Study:** Image Classification or Object Detection- Future Trends in Deep Learning Frameworks - Sentiment Analysis or Text Generation

EMERGING ELECTIVE

22CS007		Design of Dependable System		3/0/0/3
Nature of Course		C (Theory Concept)		
Course Objectives:				
1	To discover the fundamentals of dependable computing.			
2	To explore various modeling techniques for dependable computing.			
3	To determine various fault-tolerant design concepts.			
4	To examine dependability evaluation tools and techniques.			
5	To interpret the features of real-time Fault-tolerant systems.			
Course Outcomes:				
Upon completion of the course, students shall have ability to:				
C007.1	Design and develop dependable computing models by leveraging techniques and measures to ensure system reliability and robustness.			[AP]
C007.2	Analyze the reliability of systems using modeling techniques like series-parallel systems, k-out-of-n systems, fault-tree methods, and reliability graphs.			[AN]
C007.3	Classify various types of faults, errors, and failures, and evaluate their impact on system reliability			[AN]
C007.4	Apply redundancy techniques (hardware, software, time, and information) and tools like HIMAP for dependability evaluation in practical scenarios, including healthcare industries.			[AP]
C007.5	Evaluate fault-tolerant architectures, protocols, and algorithms, including checkpointing, stable storage, RAID, and fault-tolerant scheduling, to design reliable real-time distributed systems.			[E]
Course Contents:				
MODULE I		Fundamentals of Dependable Computing		15 Hours
Introduction - Dependable system - Techniques for achieving dependability - dependability measures - Combinational Modelling - Modeling by Case Analysis -Series and Parallel Systems - Classes of k-out-of-n Systems - Reliability Block Diagrams - Reliability Graphs - The Fault-Tree Method.				
MODULE II		Defects, Faults and Errors		15 Hours
Faults – errors – Defects - faults and their manifestation - classification of faults and failures - Fault detection – masking – containment – location – reconfiguration - recovery. Dependability Evaluation Techniques: Hardware redundancy - software redundancy - time redundancy - information redundancy - HIMAP tool. CASE STUDY: Dependability evaluation in healthcare industries.				
MODULE III		Fault Tolerance in Real-Time Distributed Systems		15 Hours
Introduction to Real-Time Distributed Systems- Byzantine General problem - consensus protocols - checkpointing and recovery - stable storage and RAID architectures - data replication and resiliency – Dependability evaluation techniques and tools – Analysis of Fault-tolerant hardware architecture – Analysis of Fault-tolerant software architecture - Fault tolerance in real-time systems: Time-space tradeoff – fault-tolerant scheduling algorithms. CASE STUDY: Fault-tolerant multiprocessor and distributed systems.				
Total Hours:				45
Text Books:				
1	Fault Tolerant Systems by Israel Koren, C.Krishna, Morgan Kaufmann, Science Direct, Second Edition,2020.

22CS008	Networked Cyber Physical Systems		3/0/0/3
Nature of Course:		C (Theory Concept)	
Prerequisites: Computer Organization and Digital System design			
Course Objectives:			
1.	To explain the fundamental aspects of cyber physical systems.		
2.	To explore modeling techniques of physical systems.		
3.	To examine computational systems modeling.		
4.	To discuss various communication concepts of networked cyber physical systems.		
5.	To understand security and privacy issues in networked cyber physical systems.		
Course Outcomes:			
Upon completion of the course, students shall have ability to:			
C008.1	Exemplify the fundamentals and Modelling of cyber physical systems.	[U]	
C008.2	Demonstrate the human behavior modelling and data driven modelling for real-time problems.	[AP]	
C008.3	Apply safety monitors on cyber physical systems.	[AP]	
C008.4	Show the communication aspects of Cyber physical systems and CPS implementation issues	[AP]	
C008.5	Assess the security and privacy issues in Cyber Physical Systems.	[AP]	
Course Contents:			
MODULE I Fundamentals of Cyber Physical Systems		15 Hours	
Introduction to Cyber Physical Systems: Key Features – Computational Vs Physical Systems – Applications – Hardware Platforms for CPS - Synchronous Models – Properties of Components - Composing Components – Synchronous designs – Modeling Physical Systems: Reconnecting with the Physical World - Conservation Laws - Elements in Mechanical and Electrical systems – Hybrid Systems – Hybrid Automata – Reset Maps – Zeno Behavior.			
MODULE II Computational Systems Modeling		15 Hours	
Introduction - sensing and workload modeling- human behaviour modeling- data-driven modeling- Quantization – Discretization - Boundedness of Digital Memory - Abstract Modeling of Computational Effects – Modeling Quantization and Discretization - CPS implementation issues: CPS Performance Analysis: Effect of scheduling, bus latency, sense and actuation faults on control performance, network congestion- Building real-time networks for CPS			
MODULE III Communication and Security		15 Hours	
Communication, Certainty, Uncertainty, and Belief – Messages - Belief, Knowledge, and Truth - Carrier Signal, Medium, and Link - Link Characteristics - Cyber-physical systems and their security Risks - Protections Against Natural Events and Accidents - Security and Privacy Concerns–Preventing, Detecting and mitigating attacks. Case Study: Intelligent CPS for Robot motion control and Autonomous vehicle control.			
Total Hours:			45 Hours

22CS009		SERVERLESS COMPUTING		3/0/0/3	
Nature of Course:		D (Theory Applications)			
Prerequisites:		Web Technology, Cloud Computing			
Course Objectives:					
1.	To comprehend the working of serverless computing and ways it can be used in cloud applications.				
2.	To create and manage serverless functions using the Cloud Functions platform.				
3.	To organize functions and create reusable building blocks using packages.				
4.	To navigate the web user interface to perform the tasks.				
Course Outcomes:					
Upon completion of the course, students shall have the ability to:					
C009.1	Design and develop serverless computing solutions by leveraging its fundamental concepts for diverse applications.				[AP]
C009.2	Critically evaluate the functionality and interactions of Handlers, Callback Functions, Events, and Context objects in serverless architectures.				[E]
C009.3	Devise and execute operations on storage and database services to optimize serverless application performance.				[AP]
C009.4	Construct and deploy serverless solutions using various functions and frameworks, addressing real-world challenges.				[AP]
C009.5	Analyze and optimize web services by utilizing advanced features of different serverless computing platforms.				[A]
Course Contents:					
MODULE I Serverless Essentials				15 Hours	
Serverless Computing - Benefits and use cases- Limitations - Provider offers - Explore Triggers and Events - Development Options, Toolkits, SDKs - Developing Locally vs Using the Console- The Tools - Environment Setup.					
MODULE II Computing Services				15 Hours	
Serverless Security: Comparing FaaS to IaaS - Serverless Framework – Serverless Functions – Understanding lambda functions - Command line interface - Integrating Lambda Layers with the Serverless Framework – Serverless storage services and Database services. Case Study: Amazon DynamoDB and AWS Lambda Functions.					
MODULE III Web Services				15 Hours	
Explore the UI - Security - Code - Environment Variable - HTTP Event - Storage Event using Amazon Web Services - Azure and Google Cloud - An Agnostic Approach- Reference architecture for a web App - Reference architecture for a real-time file processing. Case Study: Build AWS serverless web applications - Create a CRUD HTTP API with Lambda and DynamoDB.					
				Total Hours:	45 Hours

22CS012		DevOps		3/0/0/3
Nature of Course		D (Theory Applications)		
Prerequisites		Software Testing		
Course Objectives:				
1	To understand the essential characteristics of DevOps for rapid and reliable application development.			
2	To learn container management platform to manage application infrastructure.			
3	To configure and manage Kubernetes for automatic application deployment.			
4	To prepare the Jenkins environment for continuous integration and deployment.			
5	To test the software applications using Jenkins.			
Course Outcomes:				
Upon completion of the course, students shall have ability to:				
C012.1	Implement continuous integration and reduce software time to market and use GIT.			[AP]
C012.2	Demonstrate the container creation and running for application deployment using Docker.			[AP]
C012.3	Use the Kubernetes cluster to run the applications across multiple Environments.			[AP]
C012.4	Apply the continuous integration with Jenkins.			[AP]
C012.5	Implement the automation testing using the Jenkins platform.			[AP]
INTRODUCTION TO DEVOPS				15
Introduction – Understanding DevOps – DevOps Benefits – DevOps Lifecycle – Defining the development pipeline – Devops Technical Challenges – Continuous integration and delivery: Definition, continuous Delivery, Benefits, designing continuous integration and delivery, Preparing the build for release – GIT – A Version Controlling Tool – GIT – A CLI - Essentials of GIT in industry – Branching and Merging in GIT.				
CONTAINERIZATION WITH DOCKER AND KUBERNETES				15
Introduction to Docker – Docker Essentials – Working with containers: Container Life Cycle – Docker Essentials – Creation of Docker File – Docker Swarm – Kubernetes: Introduction to Kubernetes, Kubernetes Cluster Architecture – Understanding the concepts of services and networking – Common kubectl Commands – Pods: Pods in Kubernetes, the pod manifest, running pods, Accessing pods, resource management- Using Kubernetes engine to deploy an application – Understanding labels, selectors, jobs and schedulers.				
CONTINUOUS INTEGRATION WITH JENKINS				15
Introducing Jenkins – Essentials of Continuous Integration – Jenkins Architecture – Preparing the environment – Configuring the tools – Configuring the Jenkins Server: Configuring dashboard, System environment, Global properties, Version control – Authentication – Authorization – Automated Testing – Securing Jenkins: Security realms, Auditing. Case Study: Configuration management using Chef and Puppet.				
TOTAL PERIODS:				45
Text Books:

OPEN ELECTIVE

22CS001	ANALYSIS OF ALGORITHMS		1/0/4/3
Nature of Course:	I (Problem Concepts)		
Pre requisites:	Data Structures		
Course Objectives:			
1	To understand the techniques for analyzing the computer algorithms.		
2	To learn the paradigms for designing the algorithms.		
3	To analyze the efficiency of various algorithm design techniques / paradigms for the same problem.		
4	To understand the graphical algorithms for solving problems.		
Course Outcomes:			
Upon completion of the course, students shall have ability to			
C001.1	Understand basics of Algorithm analysis, Complexity Analysis and Apply Mathematical concepts and notations to define a problem		[U]
C001.2	Illustrate the searching and sorting algorithms.		[AP]
C001.3	Interpret the design principles of Divide and Conquer, greedy algorithm and Dynamic Programming		[AP]
C001.4	Apply the problem-solving methodology used in Backtracking.		[AP]
C001.5	Employ graph algorithms in real world problems.		[AP]
Course Contents:			
Module I Introduction		15 hours	
Fundamentals of Algorithmic Problem Solving – Important Problem Types – Fundamentals of the Analysis of Algorithmic Efficiency- Analysis Framework, Asymptotic Notations and their properties. - Time Complexity Analysis - Space Complexity – Mathematical analysis for Recursive and Non-recursive algorithms. Recurrence Relation: Substitution methods & Master Theorem. Searching: Linear, Binary search. Sorting: Bubble sort, Insertion sort & Selection sort.			
Module II Divide and Conquer, Greedy Algorithms & Dynamic Programming		15hours	
Divide and Conquer: quick sort, mergesort and Strassen's Matrix Multiplication Heaps: Binaryheap, heapsort - Greedy Algorithms: Activity selection problem, Fractional knapsack, Huffman coding - String algorithms - Naive algorithm. Dynamic Programming: Travelling Sales man Problem, 0-1 Knapsack, Coin change problem, Longest common Subsequence, Longest Increasing Subsequences.			
Module III Backtracking and Graph Algorithm		15 hours	
Backtracking - Rat in a maze, Permutation and Combination, N Queen problem, Subset Sum, M-Coloring Problem, Hamiltonian Cycle Problem, Sudoku Solver, Sieve of Sundaram, PrimeNumbers after P with Sum S. Graph Algorithms —Single source shortest path algorithm: Dijkstra Algorithm, All pair Shortest Path: Floyd Warshall Algorithm - Minimum Spanning Tree: Prims and Kruskal Algorithm.			
Total Hours:			45 Hours

22CS002	FRONT END ENGINEERING - REACT	0/0/6/3

Nature of Course	M (Practical Application)	
Pre requisites	Programming Languages	
Course Objectives:		
1.	To discuss the essence of front-end development skills.	
2.	Ability to understand and use JavaScript in client-side web applications.	
3.	To impart the knowledge of React components used in web application development platforms.	
4.	To deploy and test the React App used in Web Applications.	
Course Outcomes		
Upon completion of the course, students shall have ability to		
C002.1	Utilize the knowledge of HTML, CSS & Java script to create personal and business websites	[U]
C002.2	Illustrate the single page applications in React.	[U]
C002.3	Utilize the various React features including components and forms.	[AP]
C002.4	Show the functionality of front-end UI applications using React.	[U]
C002.5	Apply CSS for designing responsive React applications and understanding Axios package	[AP]
Course Contents:		
Introduction to HTML: HTML Basics, Semantic Elements, Tables, List, Frames and Form elements, CSS, Types of CSS, CSS selectors, Bootstrap, Introduction: JavaScript Essentials, Node.js Fundamentals, React Introduction, Overview of frameworks, libraries for client-side Web applications, React Components basics, Understanding NPM commands, React: formatting and check styles, Overview of Webpack, Babel, Understanding JSX, Limitations of JSX, Working with Components and Reusing Components.		
React Components - Props and State, Handling Events with methods, Manipulating the State, Two way data-binding, Functional (Stateless) VS Class (Stateful) Components, Parent – Child Communication, Showing Lists, List and keys, Styling Components, CSS Styling, Scoping Styles using Inline Styles, Inline Styles with Radium, Google Material UI, UI Templates for Business, Typography Usage, Debugging React Apps, Handling Logical Errors, Debugging React apps using google developer tools and React DevTool. Understanding Error Boundaries, React Component life cycle, Updating life cycle hooks, Pure Components, React's DOM, Fragments, Higher Order Components, Passing unknown Props, Validating Props, Using References, React Context API.		
React Projects, HTTP Requests/Ajax Calls, HTTP Requests in React, Introduction of Axios package, HTTP GET Request, fetching & transforming data, HTTP POST, DELETE, UPDATE, react-router vs react-router-dom, Switching Between Pages. React Forms and Form Validation, Creating a Custom Dynamic Input Component, Setting Up a JS Config for the Form, Dynamically Create Inputs based on JS Config, Adding a Dropdown Component. Handling User Input, Handling Form Submission, Adding		

Custom Form Validation, Fixing a Common Validation, Adding Validation Feedback, Showing Deploying React App to the Web.

Course Guidelines:

1. Students choose a project topic from a list of approved options or propose their own idea from the area specified in the content and Faculty Coordinator/guide approval required for student-proposed projects
2. Number of students in the project team should be maximum of 4 and Every student shall have a project guide.
3. The entire semester shall be utilized by the students to do their project work by receiving the directions from the project guide.
4. Teams should submit a project proposal, including objectives, scope, timeline, and resources and Faculty Coordinator/guide reviews and approves the proposal.
5. Students should choose projects in line with the Departmental Mission, Vision, and Program Outcomes.
6. Teams should work on their projects, following the approved plan and Regular meetings with faculty advisors for progress updates and guidance.
7. Students should attend periodic reviews to present the progress of the project to faculty and peers' team and Evaluation is based on project outcomes, presentation quality, and teamwork.
8. Teams submit a final project report, including results, conclusions, and recommendations as specified in the guidelines issued by the COE.
9. Students should not be involved in unethical behavior, such as plagiarism, copyright violations, etc while working on projects and when submitting project reports.
10. Every student team will be required to prepare and submit two (2) copies plus (no. of students) copies of the Project report of typical length 30 – 60 pages (excluding Appendices).
11. A final external project viva-voce examination will be conducted to evaluate the student's Individual and team performance based on project outcomes, presentations, reports, and teamwork by an Internal and External Examiners.

Total Practical Hours	60

22CS003	FUNDAMENTALS OF JAVA PROGRAMMING		1/0/4/3
Nature of Course:	G (Theory Programming)		
Prerequisites	Nil		
Course Objectives:			
1.	To gain insight knowledge of OOP concepts.		
2.	To analyze different types of constructor, Inheritance and polymorphism.		
3.	To understand and apply package, Interface concepts and java frameworks		
4.	To know the fundamental concepts of exceptions, threads with real world examples		
Course Outcomes:			
Upon completion of the course, students shall have ability to:			
C003.1	Infer the basic concepts of java programming.		[U]
C003.2	Analyze, and interpret Inheritance and polymorphism in real world projects.		[A]
C003.3	Apply the basis of Packages and interfaces.		[AP]
C003.4	Apply the concepts of Exceptions handling in real world projects.		[AP]
C003.5	Develop Java frameworks like spring, spring MVC and Springboot.		[AP]
Course Contents:			
MODULE I JAVA Basics		5+10 hours	
Review of Object-oriented concepts – History of Java – Java buzzwords – JVM architecture– Data types – Variables – Scope and life time of variables –Arrays – Operators – Control Statements – Type conversion and casting –Classes and objects – Methods –Strings– Static block – Access specifier – Command line arguments.			
MODULE II Inheritance, Polymorphism & Packages		5+10 hours	
Basic concepts – Constructor - Types of inheritance – Member access rules – Usage of this and Super keyword – Method Overloading – Method overriding – Abstract classes –Usage of final keyword – Defining package – Access protection –Importing packages.			
MODULE III Interfaces, Exception handling & Frameworks		5+10 hours	
Defining and Implementing interfaces, and Extending interfaces – Exception handling fundamentals– Exception Types – Usage of Try, Catch, Throw, Throws and Finally keywords – Built-in Exceptions – Creating own Exception classes - Introduction to threads - Multithreading - Templates - Introduction to Java frameworks –Spring - Spring MVC & Spring Boot.			
Total Hours:45

22CS004	MERN STACK DEVELOPMENT		0/0/6/3
Nature of Course:	M (Practical Application)		
Prerequisites	Programming Languages		
Course Objectives:			
1.	To understand the fundamentals of the MERN stack and its components		
2.	To design and implement a database using MongoDB		
3.	To build a RESTful API using Node.js and Express and understand how to handle requests and responses in Node.js and Express		
4.	To learn about state management, props, and component lifecycle in React		
5.	To deploy the application to a production environment		
Course Outcomes:			
Upon completion of the course, students shall have ability to:			
C004.1	Describe the basics concepts of MERN stack and its components		[U]
C004.2	Create a frontend application using React		[AP]
C004.3	Integrate the frontend and backend to create a full-stack application		[AP]
C004.4	Implement authentication and authorization in the application		[AP]
C004.5	Apply best practices and design patterns in MERN stack development		[A]
Course Contents:			
Introduction to MERN Stack: Overview of the MERN stack (MongoDB, Express.js, ReactJS, Node.js), Installation of necessary software and tools (MongoDB, Node.js, etc.), Introduction to JavaScript, HTML, CSS, MongoDB and NoSQL databases, CRUD operations using MongoDB.			
Frontend development with ReactJS: Introduction to ReactJS and its architecture, Introduction to ES6 Coding standards, JSX, Components and its types. Props, state, and lifecycle, Event Handling, Implementation of forms, Rendering and its types, Using third-party libraries and plugins, Debugging and testing ReactJS applications.			
Building the backend with Node.js and Express.js: Introduction to Node.js and its ecosystem, Building a RESTful API using Express.js, Connecting to MongoDB with Mongoose, Handling HTTP requests and responses, Implementing authentication and authorization, Deploying the backend to a server. Using the MERN stack to build an application. Implementing client-side routing with React Router, Handling user input and form submissions, Connecting Express.js with React.js. Setting up navigation using React Router, Creating multiple pages in a React app, State Management in React, Understanding state management.			
Defining and Implementing interfaces, and Extending interfaces – Exception handling fundamentals– Exception Types – Usage of Try, Catch, Throw, Throws and Finally keywords – Built-in Exceptions – Creating own Exception classes - Introduction to threads - Multithreading - Templates - Introduction to Java frameworks –Spring - Spring MVC & Spring Boot.			
Course Guidelines:			
1. Students choose a project topic from a list of approved options or propose their own idea from the area specified in the content and Faculty Coordinator/guide approval required for student-proposed projects			
2. Number of students in the project team should be maximum of 4 and Every student shall have a project guide.			
3. The entire semester shall be utilized by the students to do their project work by receiving the directions from the project guide.			
4. Teams should submit a project proposal, including objectives, scope, timeline, and resources and Faculty Coordinator/guide reviews and approves the proposal.			
5. Students should choose projects in line with the Departmental Mission, Vision, and Program Outcomes.			
6. Teams should work on their projects, following the approved plan and Regular meetings with faculty advisors for progress updates and guidance.			

7.	Students should attend periodic reviews to present the progress of the project to faculty and peers' team and Evaluation is based on project outcomes, presentation quality, and teamwork.
8.	Teams submit a final project report, including results, conclusions, and recommendations as specified in the guidelines issued by the COE.
9.	Students should not be involved in unethical behavior, such as plagiarism, copyright violations, etc while working on projects and when submitting project reports.
10.	Every student team will be required to prepare and submit two (2) copies plus (no. of students) copies of the Project report of typical length 30 – 60 pages (excluding Appendices).
11.	A final external project viva-voce examination will be conducted to evaluate the student's Individual and team performance based on project outcomes, presentations, reports, and teamwork by an Internal and External Examiners.

MANDATORY COURSE

22MC101	INDUCTION PROGRAMME		1/0/0/0
Nature of Course	Induction Programme		
Pre requisites	Nil		
Course Objectives:			
1.	To have broad understanding of society and relationships		
2.	To nurture the character and fulfil one's responsibility as an engineer, a citizen and a human being		
3.	To incorporate meta skills and values		
Course Outcomes:			
Upon completion of the course, students shall have ability to			
C101.1	Explore academic interest and activities		[AP]
C101.2	Work for excellence		[AP]
C101.3	Promote bonding and give a broader view of life and character		[AP]
Course Contents:			
PHYSICAL ACTIVITY: Research over the past years has shown Yoga to have stress-relieving powers on students, paving the way for improved academic performance with the practice of asanas, meditation and breathing exercises. To prove these words Yoga classes has been planned in this module.(CO mapping: C101.1, C101.2, C101.3)			
CREATIVE ARTS (students can select any one of their choice): Cultural development supports students to understand, feel comfortable with, value and appreciate the potential enrichment of cultural diversity. They should challenge discrimination, whether based on cultural or racial difference. Students should experience cultural traditions embedded in arts, crafts, language, literature, theatre, song, music, dance, sport, Science, technology and travel. Students should develop an appreciation of beauty both in experiencing artistic expression and by exploring their own creative powers. To inculcate those skills they are given a chance to exhibit their talents through painting, sculpture, pottery, music, dance, craft making and so on. .(CO mapping: C101.1, C101.2, C101.3)			
UNIVERSAL HUMAN VALUES: Moral development involves supporting students to make considered choices around their behaviour and the values that provide a framework for how they choose to live. Moral development is also learning about society's values, understanding the reasons for them, how they are derived and change; and how disagreements are resolved. Students must consider the consequences of personal and societal decisions on the wider community – local and global- and on the environment and future generations. To acquire this the students are exposed to training to enhance their soft skills. .(CO mapping: C101.1, C101.2, C101.3)			
LITERARY AND PROFICIENCY MODULES: Social development helps students to work effectively together, developing the inter-personal skills required to relate positively with their peers and people of all ages. Students must also understand how to participate productively in a diverse and plural society and learn about, and how to effectively engage with societal institutions and processes. They should understand that a person may have different roles and responsibilities within society. To reach this the following aspects are given in the form of Reading, writing, speaking – debate, role play etc.Communication and computer skills. (CO mapping: C101.1, C101.2, C101.3)			
LECTURES BY EMINENT PEOPLE: Teaching with Lectures. ... It is essential to see lectures as a means of helping students learn to think about the key concepts of a particular subject, rather than primarily as a means of transferring knowledge from instructor to student. During the induction period students will attend to Guest lectures by subject experts.(CO mapping: C101.1, C101.2, C101.3)			
VISIT TO LOCAL AREAS: Traveling is in fact a way of learning to learn. You are out of your comfort zone and so you must learn to be able to adapt to a new learning environment in a very short time. It			

also helps in your overall learning as well. In the induction period students will be taken to different places near college to learn new things. Eg. Meditation centre/orphanage/Hospital. (CO mapping: C101.1, C101.2, C101.3)

FAMILIARIZATION TO DEPARTMENT/BRANCH INNOVATION: Hod's of different branches will present about their department followed by department visit to view various facilities available at their department, new innovations from students and faculties etc.(CO mapping: C101.1, C101.2, C101.3)

		3	Strongly agreed				2	Moderately agreed				1	Reasonably agreed		

22MC102	ENVIRONMENTAL SCIENCES		2/0/0/0
Nature of Course	Theory Concept		
Pre requisites	Basics in Environmental Studies		
Course Objectives:			
1	To learn the integrated themes on various natural resources.		
2	To gain knowledge on the type of pollution and its control methods.		
3	To have an awareness about the current environmental issues and the social problems.		
Course Outcomes:			
Upon completion of the course, students shall have ability to			
C102.1	Recall and play an important role in transferring a healthy environment for future generation.		[R]
C102.2	Understand the importance of natural resources and conservation of biodiversity.		[U]
C102.3	Understand and analyze the impact of engineering solutions in a global and societal context.		[U]
C102.4	Apply the gained knowledge to overcome pollution problems.		[AP]
C102.5	Apply the gained knowledge in various environmental issues and sustainable development.		[AP]
Course Contents:			
Module I Natural Resources		10 Hours	
Introduction-Forest resources: Use and abuse, case study-Major activities in forest-Water resources-over utilization of water, dams-benefits and problems. Mineral resources-Use and exploitation, environmental effects of mining- case study-Food resources- World food problems, case study. Energy resources -Renewable and non-renewable energy sources Land resources- Soil erosion and desertification – Role of an individual in conservation of natural resources.			
Module II Environmental Pollutions		10 Hours	
Definition – causes, effects and control measures of: a. Air pollution-Acid rain - Green house effect-Global warming- Ozone layer depletion – case study- Bhopal gas tragedyb. Water pollution c. Solid waste management-Recycling of plastics-Pyrolysis method- causes, effects and control measures of municipal solid wastes d. Noise pollution. e. Nuclear hazards-case study-Chernobyl nuclear disaster-Role of an individual in prevention of pollution.			
Module III Social issues and the Environment		10 Hours	
Sustainable development-water conservation, rain water harvesting, E-Waste Management – Environmental ethics: 12 Principles of green chemistry-Scheme of labelling of environmental friendly products (Eco mark) – Emission standards – ISO 14001 standard. HIV AIDS.			
Total Hours:			30 Hours

22MC103	SOFT SKILLS		2/0/0/0
Nature of Course:		Theory Concept	
Pre requisites:		Technical Communication Skills	
Course Objectives:			
1.	To develop the students competency level and their capabilities.		
2.	To teach the students to be effective in workplace and social environments.		
3.	To create self confidence among the students and to resolve stress and conflict within themselves.		
4.	To help the students to enhance their career skills by increasing their productivity and performances.		
5.	To concentrate more on conversation skills, presentation skills, verbal ability, critical and creative thinking.		
Course Outcomes:			
Upon completion of the course, students shall have ability to			
C103.1	Remember the principles of soft skills required for their profession.		[R]
C103.2	Understand the importance of Interpersonal communication Skills among individuals, groups and cultures.		[U]
C103.3	Apply verbal and non-verbal communication skills in corporate environment.		[AP]
C103.4	Analyse and apply creativity skills, critical thinking skills and problem solving skills.		[AN]
C103.5	Articulate oral and written messages in an appropriate and persuasive manner to suit specific purposes, audiences and contexts at work place.		[AP]
C103.6	Apply good teamwork skills and Leadership Skills		[AP]
Course Contents:			
Module I Professional Communication Skills			10 Hours
Introduction to the Soft Skills, Performance Evaluation 1 –Significance of Soft Skills-Understanding the basic Communication Principles –Listening Skills- Listening Exercises-Speaking Skills- How to start and Sustain a Conversation- Speaking in Groups- Understanding self and Personal Branding, attitude, types of attitude, Positive Attitude, Self Confidence and Self-Motivation - Personal Application/Action Taken. Advanced Writing Skills-Principles of Business Writing- E mails- Writing Reports- Types of Reports- Strategies for Report Writing- Personal Application/Action Taken. Verbal Ability- Analogy-Classification- Odd One Out- Idioms and Phrases- Sentence Correction- Empathy and its importance in career -Personal Application/Action Taken.			
Module II Interpersonal Communication			10 Hours
Nonverbal Communication- Individual, Groups and Cultures- Body Language- Attire and Etiquettes- Interpersonal Skills- dealing with diverse People- Networking- Emotional Intelligence and its importance. Personal Application/Action Taken. Developing Creativity- Critical Thinking and Problem Solving Skills- Making the Right Choice- Never Give Up- Begin to Grow- Personal Application/Action Taken .Interviews- Facing Job Interviews - Planning and Preparing- Effective Resume along with Covering Letter- Planning and Preparing- Personal Application/Action Taken. Self-Discipline - Self Presentation - Personal Application/Action Taken.			
Module III Teamwork and Leadership Skills			10 Hours
Industry Expectations- Universal Hiring Rule- Personal Application/Action Taken. Importance of Human Values-Importance of Team Work- Developing Key Traits in Motivation, Persuasion, Negotiation and Leadership Skills- Being an Effective Team Player- Personal Application/Action Taken. Planning- Prioritization - Delegation- Conflict Management- Decision and its necessity in crucial			

situations- Group Discussion- Personal Application/Action Taken. Essential Skills in working Strategies- Presentation and Interaction Skills- What to Present and How- Being Assertive- Multimedia Presentation-Making Effective Presentations.
Interview Skills- Do's and Don'ts - Body Language – Answering the Common Questions of Interview- Performance Evaluation 2- Mock Interview

Total Hours: 30 Hours

22MC105		GENERAL APTITUDE		2/0/0/0
Nature of Course		Problem analytical		
Pre requisites		Basic Mathematical calculations		
Course Objectives:				
1.	To ensure that students learn to think critically about mathematical models for relationships between different quantities and use those models effectively to solve problems and reach conclusions about them.			
2.	To impart skills that enable students to effectively use and interpret data, formulas, and graphs in the workplace.			
3.	To instills confidence in facing technical aptitude questions interviewed by recruiters.			
Course Outcomes:				
Upon completion of the course, students shall have ability to				
C105.1	To teach the basics of Quantitative Techniques in a graded manner.			[R]
C105.2	Understand the verbal and non-verbal nature of problems in reality and know the shortcut methods of solving it.			[U]
C105.3	Solve problems using their general mental ability.			[AP]
C105.4	To give intense focus on improving and increasing the ability of solving real problems.			[AP]
C105.5	Think critically about mathematical models for relating different quantities to reach conclusion.			[AP]
C105.6	Enable effective use of data interpretation, formulas, graphs and assumptions.			[AP]
Course Contents:				
Module I Number Theory and Statistics				14 Hours
Number Systems– HCF and LCM of Numbers – Decimal Fractions – Simplification – Square Root and Cube Root of a number – Surds and Indices – Problems on numbers – Percentage – Ratio and Proportion – Divisibility – Mixtures – Averages- Polynomials – Solving Equations and Inequalities – Discard’s rule of signs – Problems on ages – Chain rule – Time and Work – Time and Distance – Problems on Trains – Problems on Boats and Streams- Measures of central tendency – Mean, Median and Mode – Variance and Standard deviation Logarithms – Profit and Loss – Simple Interest – Compound Interest.				
Module II Logic and Decision Making				8 Hours
Analogy – Classification – Series completion – Coding and Decoding – Blood Relations – Puzzle Test – Direction Sense test – Logical Venn Diagrams - Number Ranking and Time Sequence Test – Decision Making – Assertion and Reason– Inserting the missing one – Logical Sequence of words – Syllogisms.				
Module III Reasoning				8 Hours
Logic – Statement and Arguments – Statements and Assumptions – Statements and Course of Action – Statements and Conclusions – Deriving conclusions from passages – Functions – Different kinds of functions – Miscellaneous sets- Series – Analogy – Classifications – Analytical Reasoning – Problems on Cubes and Dice – Mirror Images – Water Images – Rule Detection.				
Total Hours:				30 Hours

22MC106		LIFE SKILLS AND ETHICS		2/0/0/0	
Nature of Course		Theory Concept			
Pre requisites		Nil			
Course Objectives:					
1	To develop communication competence in prospective engineers.				
2	To enable them to convey thoughts and ideas with clarity and focus.				
3	To develop report writing skills.				
4	To equip them to face interview & Group Discussion.				
5	To inculcate critical thinking process.				
6	To prepare them on problem solving skills.				
7	To provide symbolic, verbal, and graphical interpretations of statements in a problem description.				
Course Outcomes:					
Upon completion of the course, students shall have ability to					
C106.1	Define and identify different life skills required in personal and professional life.			[U]	
C106.2	Develop an awareness of the self and apply well-defined techniques to cope with emotions and stress.			[AP]	
C106.3	Explain the basic mechanics of effective communication and demonstrate these through presentations.			[AN]	
C106.4	Use appropriate thinking and problem-solving techniques to solve new problems.			[AP]	
C106.5	Understand the basics of teamwork and leadership			[U]	
Course Contents:					
Module I Communication Skill				10 Hours	
Introduction to Communication, The Process of Communication, Barriers to Communication, Listening Skills, Writing Skills, Technical Writing, Letter Writing, Job Application, Report Writing, Non-verbal Communication and Body Language, Interview Skills, Group Discussion, Presentation Skills, Technology-based Communication.					
Module II Critical Thinking & Problem Solving				10 Hours	
Creativity, Lateral thinking, Critical thinking, Multiple Intelligence, Problem Solving, Six thinking hats Mind Mapping & Analytical Thinking. Teamwork: Groups, Teams, Group Vs Teams, Team formation process, Stages of Group, Group Dynamics, Managing Team Performance & Team Conflicts.					
Module III Ethics, Moral & Professional Values				10 Hours	
Human Values, Civic Rights, Engineering Ethics, Engineering as Social Experimentation, Environmental Ethics, Global Issues, Code of Ethics like ASME, ASCE, IEEE. Leadership Skills: Leadership, Levels of Leadership, Making of a leader, Types of leadership, Transactions Vs Transformational Leadership, VUCA Leaders, DART Leadership, Leadership Grid & leadership Formulation					
Total Hours:				30 Hours

22MC107		STRESS MANAGEMENT		2/0/0/0
Nature of Course		Theory Concept		
Pre requisites		Nil		
Course Objectives:				
1	Understand the basic principles of stress management			
2	Recognize your stress triggers and how to manage them			
3	Develop proactive responses to stressful situations			
4	Use coping tips for managing stress both on and off the job			
5	Learn to manage stress through diet, sleep and other lifestyle factors			
6	Develop a long term action plan to minimize and better manage stress			
7	Understand the basic principles of stress management			
Course Outcomes:				
Upon completion of the course, students shall have ability to				
C107.1	Understand the basic principles of stress management			[U]
C107.2	Apply the concept of recognizing your stress triggers and find ways to manage them.			[AP]
C107.3	Develop proactive responses to stressful situations			[AN]
C107.4	Develop a long term action plan to minimize and better manage stress			[AP]
Course Contents:				
Module I Scientific Foundations of Stress				10 Hours
What is stress? – Sources of Stress – Types of Stress – Personality Factors and stress – Stress and the college student. Stress Psychophysiology: Stress and nervous system – Hypothalamic – Pituitary – Adrenal (HPA) Axis – Effect of Stress on Immune system – Health risk associated with chronic stress – Stress and Major Psychiatric disorders.				
Module II Developing Resilience to Stress				10 Hours
Understanding your stress level – Role of personality pattern, Self-esteem, Locus of control – Role of Thoughts Beliefs and Emotions – I & II – Life situation Intrapersonal: (Assertiveness, Time Management).				
Module III Strategies for Relieving Stress				10 Hours
Developing cognitive coping skills – Autogenic training, imagery and progressive relaxation – Other relaxation techniques – Exercise and Health – DIY strategies stress management.				
Total Hours:				30 Hours

22MC108	CONSTITUTION OF INDIA	2/0/0/0

Nature of Course : Theory		
Pre Requisites : Nil		
Course Objectives:		
1	To familiarize with basic information about Indian constitution	
2	To understand the fundamental rights and duties as citizens of India	
Course Outcomes:		
Upon completion of the course, students shall have ability to		
C108.1	Explain the objectives of the Constitution of India and its formation	[U]
C108.2	Recall state and central policies (Union and State Executive), fundamental Rights and their duties.	[R]
C108.3	Make use of legal directions in developing solutions to societal issues	[AP]
C108.4	Utilized for competitive exams that requires knowledge of Indian Constitution	[AP]
Course Contents:		
Module I		10
Hours		
Historical perspective, The making of the Constitution, The Role of the Constituent Assembly - Preamble and Salient features of the Constitution of India. Fundamental Rights, Directive Principles of State Policy, Fundamental Duties, Citizenship Article 5-11.		
Module II		10
Hours		
Federal structure, Powers of the Union and the states, Centre-State Relations, Union Executive – President, Prime Minister, Union Cabinet, Parliament, Supreme Court of India, State Executives – Governor, Chief Minister, State Cabinet, State Legislature, High Court and Subordinate Courts, Elections, Electoral Process, and Election Commission of India, Election Laws. Powers and Functions of Municipalities and Panchayat.		
Module III		10
Hours		
Amendments - Methods, Emergency Provisions, National Emergency, President Rule, Financial Emergency, Provisions for SC & ST, OBC, women, children and backward classes, Right to Property, Freedom of Trade and Commerce. Agricultural Law.		
Total Hours:		30 Hours

22MC109	ESSENCE OF INDIAN TRADITIONAL KNOWLEDGE		2/0/0/0
Nature of Course : Theory			
Pre Requisites : Nil			
Course Objectives:			
1	To make understand the contribution of Indian mind in various fields.		
2	To cultivate critical appreciation of the thought content and provide insights relevant for promoting cognitive ability, health, good governance, aesthetic appreciation and right values.		
Course Outcomes: Upon completion of the course, students shall have ability to			
C109.1	Relate classical Indian traditions with contemporary traditions and culture.		[R]
C109.2	Outline the thoughts of Indians in different disciplines.		[U]
C109.3	Apply the knowledge to the present context.		[AP]
C109.4	Develop a better appreciation and understanding of Indian traditions.		[C]
Course Contents:			
Module I		10 Hours	
Indian Ethics: Individual and Social – Society state and Polity (Survey) - Education systems – Agriculture (Survey) – Early & Classical Architecture – Medieval & Colonial Architecture.			
Module II		10 Hours	
Astronomy in India – Martial Arts Traditions (Survey) - Indian Literatures - Indian Philosophical Systems - Indian Traditional Knowledge on Environmental Conservation.			
Module III		10 Hours	
Ayurveda for Life, Health and Well-being - The Historical Evolution of Medical Tradition in Ancient India- Music in India - Classical & Folk			
Total hours:			30 Hours

VALUE ADDED COURSES

22VA200	CASSANDRA		1/0/0/1
Nature of Course	Theory Practical		
Prerequisites	DBMS		
Course Objectives:			
1.	To introduce the concept of big data and NoSQL databases with Cassandra.		
2.	To demonstrate use of Cassandra Query Language for creation, updation and deletion.		
3.	To infer the principles of data modeling in Cassandra and define database schema.		
4.	To articulate the Cassandra architecture and microservice for applications.		
Course Outcomes:			
Upon completion of the course, students shall have the ability to			
C200.1	Understand the history, features of Cassandra NoSQL database and demonstrate the installation of the Cassandra database on nodes.	[U]	
C200.2	Interpret use of Cassandra Query Language (CQL) to create, update and delete data from Cassandra.	[AP]	
C200.3	Develop and design data model with Cassandra and use data modeling tools.	[AP]	
C200.4	Illustrate the Cassandra and microservice architecture.	[U]	
C200.5	Apply the concepts for designing sample applications using Cassandra.	[AP]	
Course Contents:			
Module I Introduction		5 Hours	
Understanding Big Data - SQL vs NoSQL - Types of NoSQL - Introduction to NoSQL with Cassandra - CAP Theorem - History and features of Cassandra - Installing Cassandra.			
Module II Data Model and Cassandra Query Language		5 Hours	
The Cassandra Query Language: Cassandra Data Model-Clusters – Keyspaces – Tables – Columns - CQL Types - Data Modeling: -Defining Database Schema - Cassandra Data Modeling Tools.			
Module III Architecture and Application Design with Cassandra		5 Hours	
The Cassandra Architecture-Cassandra and Microservice Architecture-Hotel Application - Extending Designs-Secondary Indexes-Materialized Views -Reservation Service: A Sample Microservice			
Total Hours:			15 Hours
Text Books:			
1.	Jeff Carpenter, Eben Hewitt., “Cassandra: The Definitive Guide, 3rd Edition”, O'Reilly Media, Inc.s, 2020.		
2.	Sandeep Yarabarla., “Learning Apache Cassandra, Second Edition”, Packt Publishing, 2017.		
Suggested Readings:			
1.	Ruth Stryker, “Apache Cassandra Hands-On Training Level One”, Createspace Independent Pub, 2014.		
2.	Mat Brown, “Learning Apache Cassandra” ,Packt Publishing Ltd, 2015.		
Web References:

22VA201	MongoDB		1/0/0/1
Nature of Course	Theory Programming		
Prerequisites	Relational database management systems		
Course Objectives:			
1.	The students can be exposed to NoSQL database.		
2.	To elucidate the concepts related to MongoDB.		
3.	To design the application using MongoDB.		
Course Outcomes:			
Upon completion of the course, students shall have the ability to			
C201.1	Identify the key features of MongoDB and can query with indexing.	[U]	
C201.2	Construct MongoDB query language and aggregation for real time problems.	[AP]	
C201.3	Implement indexing, query optimization and text search techniques in the database.	[AP]	
Course Contents:			
Module I Introduction to MongoDB		5 Hours	
Database for the modern web – MongoDB’s key features: document data model, indexes, replication, scaling – MongoDB’s core server and tools – MongoDB vs other database – diving into mongoDB shell – creating and querying with indexes – basic administration.			
Module II Application Development in MongoDB		5 Hours	
Document-oriented data – Constructing Queries: E-commerce queries, MongoDB’s query language – Aggregation: E-commerce aggregation, aggregation pipeline operators, reshaping documents.			
Module III MongoDB Mastery		5 Hours	
Indexing and query optimization: Indexing theory, indexing in practice, query optimization – Text Search: Text searches-not just pattern matching, defining text search indexes, basic and aggregation framework in text search.			
Total Hours		15 Hours	
Text Books:			
1.	Kyle Banker, Peter Bakkum, Shaun Verch, Douglas Garret & Tim Hawkins, “MongoDB in action”, Second Edition, Manning Publications, 2016.		
2.	Shannon Bradshaw, Eoin Brazil & Kristina Chodorow, “MongoDB the definitive guide”, Third edition, O’Reilly publication, 2019.		
Suggested Readings:			

1.	Amit Phaltankar, Juned Ahsan, MichealHarrison&LiviunNedov, "MongoDB Fundamentals", First edition, Packt Publication, 2020.
2.	Alessandro Fiori, "Design with mongoDB- Best models for application", First Edition, 2020.

22VA130	EFFECTIVE COMMUNICATION SKILLS (CSE/CSD/M.TECH-CSE)		2/0/0/2
Nature of Course	E (Theory skill based)		
Pre-Requisites	Basics of English Language		
Course Objectives:			
1.	To become self-confident individuals by mastering interpersonal skills, team management skills, and leadership skills.		
2.	To develop effective communication skills.		
3.	To train students to use the language with confidence and without committing errors.		
4.	To improve the fluency of the students when speaking English.		
5.	To focus on pronunciation, dialect, intonation, interaction, practice and communication.		
Course Outcomes:			
Upon completion of the course, students shall have ability to			
C130.1	Remember correct usage of English grammar in speaking.		[U]
C130.2	Apply and improve their speaking ability in English both in terms of fluency and comprehensibility.		[AP]
C130.3	Understand and communicate effectively in personal and professional situations.		[U]
C130.4	Understand and analyse oral presentations and receive feedback on their performance.		[U]
C130.5	Apply reading fluency skills through extensive reading.		[AP]
Course Contents:			
Module I		10 Hours	
Pre-Test - Vocabulary Building- Connecting Phrases- Exercises and Activities-Conversation Practices- Greetings-exchanging ideas - Asking for information - questioning techniques / answering techniques - Getting people to do things - requesting/agreeing/refusing – Activity-Common Expressions (Individual)- Talking about Favorites - Talk Show Activity - Impromptu Speaking- Personal Interest - Talking about Past Events and Future/Talking about Everyday Life (Family, Hobbies, Work, Travel and Current Events) – Activity.			
Module II		10 Hours	
Listening- Trials of a Good Listener- Listening to Texts, Listening for Specific Purpose- Activity-21st Century Skills – Communication with Critical Thinking and Creativity-Role Play- Activity-Personality Development- Manners and Etiquettes. Building Confidence and Developing Presentation Skills- Activity- Singing a Song (Group) - Activity.			
Module III		10 Hours	
Story Telling- Use of Charts and Graphs- Activity -Persuasive Speech- Handling Criticism-Justifying Opinions-Conflict-Resolution-Situational Role Play Activity--News reading and Pronunciation- Activity -Satori- Intuitive Approach- Activity-Post Test.			
Total Hours:			30 Hours

Summative assessment based on Continuous and End Semester Examination		
Internal Components - 10		
S.No	Components	Marks
1.	Vocabulary Building	10 Marks
2.	Conversation Practices	10 Marks
3.	Common Expressions	10 Marks
4.	Impromptu Speaking	10 Marks
5.	Listening	10 Marks
6.	21st Century Skills	10 Marks
7.	Presentation Skills	10 Marks
8.	Singing a Song (Group)	10 Marks
9.	News Reading and Pronunciation	10 Marks
10.	Satori	10 Marks
Total		100 Marks
